Description:

PERMIT DESCRIPTION
Downstate Medical Center
DEC ID # 2-6104-00132/00009 (Ren 2, Mod 1)

This is a major Title V permit modification for the installation of three (3) new 3.0 MM Btu/hr each dual fuel boilers (Emission Sources S0008, S0009 & S0010) and a 1,500 kilowatt exempt emergency generator (Emission Source GEN01) in Emission Unit 0-U0004 - the New Academic Building (NAB). The three new boilers are to burn #2 fuel oil (Process FO2) and natural gas (Process NG1), while the emergency generator is to burn diesel fuel oil (Process GEN). In addition, in Emission Unit 0-U0005, the four (4) emergency generators will be replaced with four (4) new emergency generators (Emission Sources GEN02, GEN03, GEN04 & GEN05), and a 2000 KW temporary emergency generator (Emission Source TEMPG) will be added, burning diesel fuel oil (Process

GN1). All emissions from the new sources are to be included under the existing 225 tons per year cap of NO_x and the existing 225 tons per year cap of SO₂.

The emissions from the new sources, three 3 MM Btu/hr each dual fuel boilers and the 1500 KW exempt emergency generator in the New Academic Building (Emission Source GEN01), meet the current NO_x emission limit of 225 tons/yr, and the current SO_x emission limit of 225 tons/yr. Even though there are no new limits being implemented and the old limits remain the same, this modification is considered a major modification due to the addition of several new sources as defined in 6 NYCRR 201-6.6 (c).

Downstate Medical Center (SUNY) is located at 450 Clarkson Avenue, in Brooklyn, New York. SUNY maintains a 225 tons/year limit on both NO_x and SO_x emissions as stated in their current Title V permit. Based on their current natural gas and #2 fuel oil usage, SUNY emits approximately 25 tons/yr of NO_x on average, well below their current limit.

The 1,500 kilowatt exempt emergency generator (Emission Source GEN01) in the new Academic Building was purchase on 6/8/2010, is turbocharged and low temperature aftercooled, and hence 40 CFR 89.112, Supart B and 40 CFR 89.113, Supart B are not applicable.

The facility has submitted the EPA Tier 2 Exhaust Emission Certification for the 1,500 kilowatt emergency generator with the permit modification application. Using emission factors from AP-42 as well as Tier 2 emission certificated provided by the manufacturer for the 1,500 kilowatt emergency generator, the potential emissions are as follows:

Total Potential Emissions:

| Pollutant | Generator (tpy) | Boiler (tpy) | Total (tpy) |
|-----------------|-----------------|--------------|-------------|
| PM | 0.17 | 0.19 | 0.36 |
| SO _x | 2.03 | 2.70 | 4.74 |
| NO _x | 5.29 | 1.90 | 7.19 |
| VOC | 0.35 | 0.07 | 0.42 |
| CO | 2.89 | 1.07 | 3.96 |

| | | | |
|------|-------|-----------|----------|
| Lead | ---- | 1.44 E-04 | 1.44E-04 |
| HAP | 0.01 | 0.02 | 0.03 |
| CO2e | 5,526 | 2,131 | 7,657 |

The Total Potential Emissions above are based on maximum runtime (500 hrs/yr for the generator and 8,760 hrs/yr for the boiler). However; the emissions from the two new sources are to be included under the facility's current existing permit limit and will not cause modifying the permit limits. But, this modification is considered a major modification due to the addition of several new sources as defined in 6 NYCRR 201-6.6 (c).

Also, SUNY will be replacing four emergency generators and removing a fifth. The four (4) generators that are to be replaced are Generators 2-5 (Emission Sources GEN02, GEN03, GEN04 & GEN05), which are all Caterpillar D348 Model SR4 (620 kW each).

The replacement emergency generators are to be 2013 Caterpillar C27 each rated at 750kW, EPA Tier II emission level certified, and each is a four-cycle diesel engines. The fifth generator that is to be removed (and not replaced) is the Onan natural gas generator (115 kW). Each of the replacement standby stationary generator is a diesel 2013 Caterpillar Model C27, compression ignition, each is rated at 750 KW (1,141 bHP), EPA Tier II emission level certified. All replacement generators meet the emission limitations found in 40 CFR 60 Subpart IIII. Each emergency generator will be operated a maximum of 500 hours/yr.

There will also be four (4) identical 275 gallon Day tanks located in the generator room and will gbe used for the four replacement generators. Each generator is a 4-stroke water-cooled diesel, each with a displacement of 27.03 liter, and with a compression ration of 16.5: 1.0.

The facility has submitted data for the four (4) identical replacement emergency generators. The gaseous emissions data measurements are consistent with those described in EPA 40 CFR Part 89 Subpart D, 40 CFR Part 60 Subpart IIII, and ISO 8178 for measuring HC, CO, PM, and NOx. Gaseous emissions values are weighted cycle averages and are in compliance with the non-road regulations. The maximum limits are as follows:

CO: 3.5 g/bKW-hr

NO_x + HC: 6.4 g/bKW-hr

PM: 0.20 g/bKW-hr

Total Potential Emissions for the four (4) 750 KW (1,141 bHP) each generator (GEN02, GEN03, GEN04, and GEN05):

| Pollutant | Emissions | Fuel Consumption @ 100% Load | Emissions (lb/hr) |
|-----------------|--------------|------------------------------|-------------------|
| NO _x | 5.25 g/HP-hr | 202.9 L/hr or 53.6 gal/hr | 15.83 |
| CO | 0.25 g/HP-hr | | |
| HC | 0.03 g/HP-hr | | 0.12 |
| PM | 0.21 g/HP-hr | | 0.10 |

Emissions Power Category: $560 < \text{KW} < \text{or} = 2237$

By acceptance of this permit, the permittee agrees that the permit is contingent upon strict compliance with the ECL, all applicable regulations, the General Conditions specified and any Special Conditions included as part of this permit.

NOTIFICATION OF GENERAL PERMITTEE OBLIGATIONS
The items listed below are not subject to the annual compliance certification requirements under Title V. Permittees may also have other obligations under regulations of general applicability.

Item A: Emergency Defense - 6 NYCRR 201-1.5

An emergency, as defined by subpart 201-2, constitutes an affirmative defense to penalties sought in an enforcement action brought by the Department for noncompliance with emissions limitations or permit conditions for all facilities in New York State.

(a) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

(1) An emergency occurred and that the facility owner or operator can identify the cause(s) of the emergency;

(2) The equipment at the permitted facility causing the emergency was at the time being properly operated and maintained;

(3) During the period of the emergency the facility owner or operator took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit; and

(4) The facility owner or operator notified the Department within two working days after the event occurred. This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

(b) In any enforcement proceeding, the facility owner or operator seeking to establish the occurrence of an emergency has the burden of proof.

(c) This provision is in addition to any emergency or upset provision contained in any applicable requirement.

Item B: Public Access to Recordkeeping for Title V Facilities - 6 NYCRR 201-1.10 (b)

The Department will make available to the public any permit application, compliance plan, permit, and monitoring and compliance certification report pursuant to Section 503(e) of the Act, except for information entitled to confidential treatment pursuant to 6 NYCRR Part 616 - Public Access to records and Section 114(c) of the Act.

New York State Department of Environmental Conservation

Permit ID: 2-6104-00132/00009

Facility DEC ID: 2610400132

Item C: Timely Application for the Renewal of Title V Permits - 6 NYCRR 201-6.2 (a) (4)

Owners and/or operators of facilities having an issued Title V permit shall submit a complete application at least 180 days, but not more than eighteen months, prior to the date of permit expiration for permit renewal purposes.

Item D: Certification by a Responsible Official - 6 NYCRR 201-6.2 (d) (12)

Any application, form, report or compliance certification required to be submitted pursuant to the federally enforceable portions of this permit shall contain a certification of truth, accuracy and completeness by a responsible official. This certification shall state that based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

Item E: Requirement to Comply With All Conditions - 6 NYCRR 201-6.4 (a) (2)

The permittee must comply with all conditions of the Title V facility permit. Any permit non-compliance constitutes a violation of the Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

Item F: Permit Revocation, Modification, Reopening, Reissuance or Termination, and Associated Information Submission Requirements - 6 NYCRR 201-6.4 (a) (3)

This permit may be modified, revoked, reopened and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

Item G: Cessation or Reduction of Permitted Activity Not a Defense - 6 NYCRR 201-6.4 (a) (5)

Compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that such applicable requirements are included and are specifically identified in the permit, or the Department, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable to the major stationary source, and the permit includes the determination or a concise summary thereof. Nothing herein shall preclude the Department from revising or revoking the permit pursuant to 6 NYCRR Part 621 or from exercising its summary abatement authority. Nothing in this permit shall alter or affect the following:

- i. The ability of the Department to seek to bring suit on behalf of the State of New York, or the Administrator to seek to bring suit on behalf of the United States, to immediately restrain any person causing or contributing to pollution presenting an imminent and substantial endangerment to public health, welfare or the environment to stop the emission of air pollutants causing or contributing to such pollution;
- ii. The liability of a permittee of the Title V facility for any violation of applicable requirements prior to or at the time of permit issuance;

No such reopening is required if the effective date of the requirement is later than the date on which this permit is due to expire, unless the original permit or any of its terms and conditions has been extended by the Department pursuant to the provisions of Part 201-6.7 and Part 621.

ii. The Department or the Administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the permit.

iii. The Department or the Administrator determines that the Title V permit must be revised or reopened to assure compliance with applicable requirements.

iv. If the permitted facility is an "affected source" subject to the requirements of Title IV of the Act, and additional requirements (including excess emissions requirements) become applicable. Upon approval by the Administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.

Proceedings to reopen and issue Title V facility permits shall follow the same procedures as apply to initial permit issuance but shall affect only those parts of the permit for which cause to reopen exists.

Reopenings shall not be initiated before a notice of such intent is provided to the facility by the Department at least thirty days in advance of the date that the permit is to be reopened, except that the Department may provide a shorter time period in the case of an emergency.

Item L: Permit Exclusion - ECL 19-0305

potential to exceed the opacity standard.

The permittee shall investigate the cause, make any necessary corrections, and verify that the excess visible emissions problem has been corrected. If visible emissions with the potential to exceed the standard continue, the permittee will conduct a Method 9 assessment within the next operating day of the sources associated with the potential noncompliance to determine the degree of opacity and will notify the NYSDEC if the method 9 test indicates that the opacity standard is not met.

Fuel Switching Option: The owner or operator of an emission source subject to this Subpart may commit to burning cleaner fuel between May 1st and September 30th of each year. Fuel switching must result in quantifiable annual NOx emissions equal to or less than the NOx emissions expected if the emission source complied with the presumptive RACT emission limit of 0.20 lb/MM Btu as set forth in 6 NYCRR 227-2.4 (c) (1) (ii).

In order to comply with the NOx RACT, the facility will be operated in accordance with the fuel switching option found in 6 NYCRR 227-2.5 (a). The facility will only burn natural gas (Process GAS) during the period of May 1st to September 30th. Therefore, the facility meets the RACT emission limit of 0.20 lbs NOx/MM Btu as stated in 6 NYCRR 227-2.4 (c)(1)(ii), by taking the annual average of NOx emissions per MM Btu.

Monitoring Type: RECORD KEEPING/MAINTENANCE PROCEDURES

Monitoring Description:

The owner or operator of an existing emergency stationary RICE with a site rating of less than or equal to 500 brake horsepower located at a major source of HAP emissions, a new or reconstructed emergency stationary RICE with a site rating of more than 500 brake horsepower located at a major source of HAP emissions that was installed on or after June 12, 2006, or an existing emergency stationary RICE located at an area source of HAP emissions must operate the emergency stationary RICE according to the requirements in paragraphs (i) through (iii) below. Any operation other than emergency operation, maintenance and

testing, and operation in non-emergency situations for 50 hours per year, as described in paragraphs (i) through (iii) below, is prohibited. If you do not operate the engine according to the requirements in paragraphs (i) through (iii) below, the engine will not be considered an emergency engine under this subpart and will need to meet all requirements for non-emergency engines.

(i) There is no time limit on the use of emergency stationary RICE in emergency situations.

(ii) The facility may operate the emergency stationary RICE for the purpose of maintenance checks and readiness testing, provided that the tests are recommended by Federal, State or local government, the manufacturer, the vendor, or the insurance company associated with the engine. Maintenance checks and readiness testing of such units is limited to 100 hours per year. The owner or operator may petition the EPA Administrator for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per year.

(iii) The facility may operate the emergency stationary RICE up to 50 hours per year in non-emergency situations, but those 50 hours are counted towards the 100 hours per year provided for maintenance and testing. The 50 hours per year for non-emergency situations cannot be used for peak shaving or to generate income for a facility to supply power to an electric grid or otherwise supply power as part of a financial arrangement with another entity; except that owners and operators may operate the emergency engine for a maximum of 15 hours per year as part of a demand response program if the regional transmission organization or equivalent balancing authority and transmission operator has determined there are emergency conditions that could lead to a potential electrical blackout, such as unusually low frequency, equipment overload, capacity or energy deficiency, or unacceptable voltage level. The engine may not be operated for more than 30 minutes prior to the time when the emergency condition is expected to occur, and the engine operation must be terminated immediately after the facility is notified that the emergency condition is no longer imminent. The 15 hours per year of demand response operation are counted as part of the 50 hours of operation per year provided for non-emergency situations. The supply of emergency power to another entity or entities pursuant to financial arrangement is not limited by this paragraph,

DEVICE PARAMETERS AS SURROGATE

Monitoring Description:

No person shall operate a stationary combustion installation which exhibits greater than 20 percent opacity (six minute average), except for one-six-minute period per hour of not more than 27 percent opacity.

The Department reserves the right to perform or require the performance of a Method 9 opacity evaluation at any time during facility operation.

The permittee will conduct observations of visible emissions from the emission unit, process, etc. to which this condition applies at the monitoring frequency stated below while the process is in operation. The permittee will investigate, in a timely manner, any instance where there is cause to believe that visible emissions have the potential to exceed the opacity standard.

The permittee shall investigate the cause, make any necessary corrections, and verify that the excess visible emissions problem has been corrected. If visible emissions with the potential to exceed the standard continue, the permittee will conduct a Method 9 assessment within the next operating day of the sources associated with the potential noncompliance to determine the degree of opacity and will notify the NYSDEC if the method 9 test indicates that the opacity standard is not met.

Records of visible emissions observations (or any follow-up method 9 tests), investigations and corrective actions will be kept on-site. Should the Department determine that permittee's record keeping format is inadequate to demonstrate compliance with this condition, it shall provide written notice to the permittee stating the inadequacies, and permittee shall have 90 days to revise its prospective record keeping format in a manner

Item A: General Provisions for State Enforceable Permit Terms and Condition - 6 NYCRR Part 201-5

Any person who owns and/or operates stationary sources shall operate and maintain all emission units and any required emission control devices in compliance with all applicable Parts of this Chapter and existing laws, and shall operate the facility in accordance with all criteria, emission limits, terms, conditions, and standards in this permit. Failure of such person to properly operate and maintain the effectiveness of such emission units and emission control devices may be sufficient reason for the Department to revoke or deny a permit.

The owner or operator of the permitted facility must maintain all required records on-site for a period of five years and make them available to representatives of the Department upon request. Department representatives must be granted access to any facility regulated by this Subpart, during normal operating hours, for the purpose of determining compliance with this and any other state and federal air pollution control requirements, regulations or law.

STATE ONLY APPLICABLE REQUIREMENTS

The following conditions are state applicable requirements and are not subject to compliance certification requirements unless otherwise noted or required under 6 NYCRR Part 201.

Condition 1-61: Malfunctions and start-up/shutdown activities
Effective between the dates of 03/04/2014 and 10/25/2015

Applicable State Requirement:6 NYCRR 201-1.4

Item 1-61.1:

(a) The facility owner or operator shall take all necessary and appropriate actions to prevent the emission of air pollutants that result in contravention of any applicable emission standard during periods of start-up, shutdown, or malfunction.

(b) The facility owner or operator shall compile and maintain records of all equipment malfunctions, maintenance, or start-up/shutdown activities when they can be expected to result in an exceedance of any applicable emission standard, and shall submit a report of such activities to the department when requested to do so, or when so required by a condition of a permit issued for the corresponding air contamination source. Such reports shall state whether any violations occurred and, if so, whether they were unavoidable, include the time, frequency and duration of the maintenance and/or start-up/shutdown activities, and an estimate of the emission rates of any air contaminants released. Such records shall be maintained for a period of at least five years and made available for review to department representatives upon request. Facility owners or operators subject to continuous stack monitoring and quarterly reporting requirements need not submit additional reports for equipment maintenance or start-up/shutdown activities for the facility to the department.

(c) In the event that emissions of air contaminants in excess of any emission standard in this Subchapter occur due to a malfunction, the facility owner or operator shall compile and maintain records of the malfunction and notify the department as soon as possible during normal working hours, but not later than two working days after becoming aware that the malfunction occurred. When requested by the department, the facility owner or operator shall submit a written report to the department describing the malfunction, the corrective action taken, identification of air contaminants, and an estimate of the emission rates.

(d) The department may also require the owner or operator to include, in reports described under Subdivisions (b) and (c) of this Section, an estimate of the maximum ground level concentration of each air contaminant emitted and the effect of such emissions.

(e) A violation of any applicable emission standard resulting from start-up, shutdown, or malfunction conditions at a permitted or registered facility may not be subject to an enforcement action by the department and/or penalty if the department determines, in its sole discretion, that such a violation was unavoidable. The actions and recordkeeping and reporting requirements

New York State Department of Environmental Conservation

Permit ID: 2-6104-00132/00009

Facility DEC ID: 2610400132

listed above must be adhered to in such circumstances.

Condition 57: Unavoidable noncompliance and violations
Effective between the dates of 10/26/2010 and 10/25/2015

Applicable State Requirement: 6 NYCRR 201-1.4

Item 57.1:

At the discretion of the commissioner a violation of any applicable emission standard for necessary scheduled equipment maintenance, start-up/shutdown conditions and malfunctions or upsets may be excused if such violations are unavoidable. The following actions and recordkeeping and reporting requirements must be adhered to in such circumstances.

(a) The facility owner and/or operator shall compile and maintain records of all equipment maintenance or start-up/shutdown activities when they can be expected to result in an exceedance of any applicable emission standard, and shall submit a report of such activities to the commissioner's representative when requested to do so in writing or when so required by a condition of a permit issued for the corresponding air contamination source except where conditions elsewhere in this permit which contain more stringent reporting and notification provisions for an applicable requirement, in which case they supercede those stated here. Such reports shall describe why the violation was unavoidable and shall include the time, frequency and duration of the maintenance and/or start-up/shutdown activities and the identification of air contaminants, and the estimated emission rates. If a facility owner and/or operator is subject to continuous stack monitoring and quarterly reporting requirements, he need not submit reports for equipment maintenance or start-up/shutdown for the facility to the commissioner's representative.

(b) In the event that emissions of air contaminants in excess of any emission standard in 6 NYCRR Chapter III Subchapter A occur due to a malfunction, the facility owner and/or operator shall report such malfunction by telephone to the commissioner's representative as soon as possible during normal working hours, but in any event not later than two working days after becoming aware that the malfunction occurred. Within 30 days thereafter, when requested in writing by the commissioner's representative, the facility owner and/or operator shall submit a written report to the commissioner's representative describing the malfunction, the corrective action taken, identification of air contaminants, and an estimate of the emission rates. These reporting requirements are superceded by conditions elsewhere in this permit which contain reporting and notification provisions for applicable requirements more stringent than those above.

(c) The Department may also require the owner and/or operator to include in reports described under (a) and (b) above an estimate of the maximum ground level concentration of each air contaminant emitted and the effect of such emissions depending on the deviation of the malfunction and the air contaminants emitted.

(d) In the event of maintenance, start-up/shutdown or malfunction conditions which result in emissions exceeding any applicable emission standard, the facility owner and/or operator shall take appropriate action to prevent emissions which will result in contravention of any applicable ambient air quality standard. Reasonably available control technology, as determined by the commissioner, shall be applied during any maintenance, start-up/shutdown or malfunction condition subject to this paragraph.

(e) In order to have a violation of a federal regulation (such as a new source performance

New York State Department of Environmental Conservation

Permit ID: 2-6104-00132/00009

Facility DEC ID: 2610400132

standard or national emissions standard for hazardous air pollutants) excused, the specific federal regulation must provide for an affirmative defense during start-up, shutdowns, malfunctions or upsets.

Condition 58: Air pollution prohibited
Effective between the dates of 10/26/2010 and 10/25/2015

Effective between the dates of 03/04/2014 and 10/25/2015

Applicable State Requirement:6 NYCRR 211.2

Item 1-62.1:

Except as permitted by a specific part of this Subchapter and for open fires for which a restricted burning permit has been issued, no person shall cause or allow any air contamination source to emit any material having an opacity equal to or greater than 20 percent (six minute average) except for one continuous six-minute period per hour of not more than 57 percent opacity.

Item 61.2:

Compliance Demonstration shall include the following monitoring:

Monitoring Type: MONITORING OF PROCESS OR CONTROL
DEVICE PARAMETERS AS SURROGATE

Monitoring Description:

No person may cause or allow emissions to the outdoor atmosphere having a six minute average opacity of 10 percent or greater based upon the six minute average in reference test Method 9 in Appendix a of 40 CFR 60 from any emission source subject to these requirements. The permittee must initially demonstrate compliance with the standards in this Subpart by either (1) on site testing, or (2) submittal of a test report for an identical incinerator tested in New York and approved by the

New York State Department of Environmental Conservation

Permit ID: 2-6104-00132/00009

Facility DEC ID: 2610400132

commissioner.

Operators of incinerators that do not utilize a continuous opacity monitor (COM) for the measuring of smoke emissions or that do not have a certified visible emissions evaluator on site shall be required to perform the following:

- 1) once per day, during daylight hours except during conditions of extreme weather (fog, snow, rain), observe the stack or stacks of all incinerators which are operating, at that time, for any visible emissions (visible emissions do not include steam plumes**),
- 2) record in a bound log book, the daily results of the visual observation - was there visible emissions observed - yes or no, including explanations for days when weather conditions prohibit such observations of visible emissions, and
- 3) maintain the data in this log book for five years.

If the operator observes any visible emissions, the operation of the incinerator shall be evaluated and any errors corrected immediately. If visible emissions greater than zero persist, a Method 9 analysis of the affected emission point(s) shall be conducted by a certified visible emissions evaluator within 2 business days of the initial occurrence. The operator must contact the Regional Air Pollution Control Engineer (for their location) within one business day of performing the Method 9 analysis, during normal business hours (8:00am to 4:00 pm), if the analysis shows an exceedence of the required standards for opacity. Upon notification any corrective actions or future compliance schedules shall be presented to the region for acceptance.

** Note ** Steam plumes generally form after leaving the top of the stack (this is known as a detached plume). The distance between the stack and the beginning of the detached plume may vary, however, there is (normally) a distinctive distance between the plume and stack. Steam plumes are white in color and have a billowy consistency. Steam plumes dissipate within a short distance of the stack (the colder the air the longer the steam plume will last) and leave no dispersion trail down wind of the stack (other than steam).
