**Description:**

The Owens Corning Insulating Systems, LLC facility in Feura Bush, New York (OCIS Delmar Plant) manufactures wool fiberglass insulation products through the operation of two glass furnaces and associated production lines (DM1 and DM2) along with air pollution control equipment. The facility currently operates

under a Title V permit pursuant to Article 19 (Air Pollution Control) of the New York State Environmental Conservation Law and Title V of the federal Clean Air Act.

The project includes the combination of five minor modifications. Each of these modifications were separate actions and their separation does not circumvent any air regulations; however, they are being combined for permitting purposes.

The first minor modification included the replacement of the glass conveying system that transfers glass from a truck or railcar to the bucket elevator from a horizontal screw auger to an en masse drag type system. The glass throughput of the system is determined by the bucket elevator and was not changed with this modification.

The second minor modification was for the installation of a bisect saw on DM2 manufacturing line.

The third minor modification was a change to the bagging compression system and associated blower equipment. The new bagging system does not change the facility's throughput.

The fourth minor modification was to update multiple process descriptions.

The fifth minor modification was to install a new citric acid tank, replace the lubrication system, and change the adhesive system.

By acceptance of this permit, the permittee agrees that the permit is contingent upon strict compliance with the ECL, all applicable regulations, the General Conditions specified and any Special Conditions included as part of this permit.

This indemnification does not extend to any claims, suits, actions, or damages to the extent attributable to DEC's own negligent or intentional acts or omissions, or to any claims, suits, or actions naming the DEC and arising under article 78 of the New York Civil Practice Laws and Rules or any citizen suit or civil rights provision under federal or state laws.

**The items listed below are not subject to the annual compliance certification requirements under Title V. Permittees may also have other obligations under regulations of general applicability.**

**Item A: Emergency Defense - 6 NYCRR 201-1.5**

An emergency, as defined by subpart 201-2, constitutes an affirmative defense to penalties sought in an enforcement action brought by the Department for noncompliance with emissions limitations or permit conditions for all facilities in New York State.

(a) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

(1) An emergency occurred and that the facility owner or operator can identify the cause(s) of the emergency;

(2) The equipment at the permitted facility causing the emergency was at the time being properly operated and maintained;

(3) During the period of the emergency the facility owner or operator took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit; and

(4) The facility owner or operator notified the Department within two working days after the event occurred. This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

(b) In any enforcement proceeding, the facility owner or operator seeking to establish the occurrence of an emergency has the burden of proof.

(c) This provision is in addition to any emergency or upset provision contained in any applicable requirement.

**Item B: Public Access to Recordkeeping for Title V Facilities - 6 NYCRR 201-1.10 (b)**

The Department will make available to the public any permit application, compliance plan, permit, and monitoring and compliance certification report pursuant to Section 503(e) of the Act, except for information entitled to confidential treatment pursuant to 6 NYCRR Part 616 - Public Access to records and Section 114(c) of the Act.

## **Item J: Permit Shield - 6 NYCRR 201-6.4 (g)**

All permittees granted a Title V facility permit shall be covered under the protection of a permit shield, except as provided under 6 NYCRR Subpart 201-6. Compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that such applicable requirements are included and are specifically identified in the permit, or the Department, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable to the major stationary source, and the permit includes the determination or a concise summary thereof. Nothing herein shall preclude the Department from revising or revoking the permit pursuant to 6 NYCRR Part 621 or from exercising its summary abatement authority. Nothing in this permit shall alter or affect the following:

- i. The ability of the Department to seek to bring suit on behalf of the State of New York, or the Administrator to seek to bring suit on behalf of the United States, to immediately restrain any person causing or contributing to pollution presenting an imminent and substantial endangerment to public health, welfare or the environment to stop the emission of air pollutants causing or contributing to such pollution;
- ii. The liability of a permittee of the Title V facility for any violation of applicable requirements prior to or at the time of permit issuance;
- iii. The applicable requirements of Title IV of the Act;
- iv. The ability of the Department or the Administrator to obtain information from the permittee concerning the ability to enter, inspect and monitor the facility.

## **Item K: Reopening for Cause - 6 NYCRR 201-6.4 (i)**

three or more years, a reopening shall be completed not later than 18 months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which this permit is due to expire, unless the original permit or any of its terms and conditions has been extended by the Department pursuant to the provisions of Part 201-6.7 and Part 621.

ii. The Department or the Administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the permit.

iii. The Department or the Administrator determines that the Title V permit must be revised or reopened to assure compliance with applicable requirements.

iv. If the permitted facility is an "affected source" subject to the requirements of Title IV of the Act, and additional requirements (including excess emissions requirements) become applicable. Upon approval by the Administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.

Proceedings to reopen and issue Title V facility permits shall follow the same procedures as apply to initial permit issuance but shall affect only those parts of the permit for which cause to reopen exists.

Reopenings shall not be initiated before a notice of such intent is provided to the facility by the Department at least thirty days in advance of the date that the permit is to be reopened, except that the Department may provide a shorter time period in the case of an emergency.

**Item 10-1.1:**

This section contains a summary of those requirements that have been specifically identified as being not applicable to this facility and/or emission units, emission points, processes and/or emission sources within this facility. The summary also includes a justification for classifying any such requirements as non-applicable.

(From Mod 10)

40 CFR 60.680

Reason: Currently, both the DM-1 and DM-2 manufacturing lines are not subject to 40 CFR 60, Subpart PPP (40 CFR 60.680 or NSPS PPP) - Standard of Performance for Wool Fiberglass Insulation Manufacturing Plants. The binder change project to a starch-based binder did not trigger the applicability of NSPS PPP for either the DM-1 or DM-2 manufacturing lines. Applicability of NSPS PPP is for rotary spin wool fiberglass insulation manufacturing lines that commence construction, modification or reconstruction after February 7, 1984. 40 CFR 60.14 defines modification as any physical change or operational change to an existing facility which results in an increase in the emission rate to the atmosphere of any pollutant to which a standard applies, where the emission rate is required to be expressed as kg/hour. In other words, the NSPS modification provisions apply an hourly emissions rate test to determine whether an emissions increase results from a physical or operational change. Pursuant to longstanding USEPA interpretations, the emission rate before and after a physical or operational change is evaluated at each unit by comparing the hourly potential emissions under current maximum capacity to hourly

**New York State Department of Environmental Conservation**

**Permit ID: 4-0122-00004/00039**

**Facility DEC ID: 4012200004**

emissions at maximum capacity after the change.

The binder change project did not increase the hourly bare glass production rate or emission rate of any pollutant from either of the affected manufacturing lines.

Therefore, the non-applicability determination of NSPS PPP for both the DM-1 and DM-2 manufacturing lines remains in effect.

**40 CFR 63.820**

Reason: This standard covers wide web flexographic printing. Although the facility does use flexographic printing in emission unit U-00005, process FG1 and emission unit U-00015, process FG2, it does not qualify as wide web. In all cases, the printing face is less than 18 inches wide.

**40 CFR Part 63, Subpart NNN**

Reason: As part of its application submitted to the Department on December 7, 2009 for a permit modification to allow conversion from a binder system based on a phenol-formaldehyde resin to a binder system formulated around a starch-based resin at the Feura Bush facility, Owens Corning Insulating Systems, LLC (OCIS) presented supporting information (dated November 20, 2009 and March 9, 2010) requesting a determination regarding the applicability of the NESHAP for Wool Fiberglass Manufacturing (Subpart NNN) to operations at this facility following the binder conversion. The Department forwarded this request onto the United States Environmental Protection Agency (USEPA), which oversees the federal NESHAP program. In response, USEPA informed the Department on June 15, 2010 of its determination that, upon completion of the conversion to the starch-based binder system, the OCIS Feura Bush facility would no longer meet the definition of an affected facility in 40 CFR 63.1380 and, therefore, would no longer be subject to Subpart NNN. The conversion to the starch-based binder system at the facility was completed in February 2011 for the DM-1 production line and in September 2011 for the DM-2 production line. Therefore, because the facility no longer uses phenol-formaldehyde binders, it is no longer subject to the Subpart NNN requirements.

The NESHAP for Wool Fiberglass Manufacturing lists three affected sources subject to the standards of Subpart NNN: glass-melting furnaces located at a wool fiberglass manufacturing facility; rotary spin wool fiberglass manufacturing lines producing a bonded wool fiberglass building insulation product; and flame attenuation wool fiberglass manufacturing lines producing a bonded heavy density product. Prior to the switch to a starch-based

binder, the facility operated two glass-melting furnaces located at a wool fiberglass manufacturing facility and two rotary spin wool fiberglass manufacturing lines producing a bonded wool fiberglass building insulation product that were subject to Subpart NNN requirements. There is no flame attenuation wool fiberglass manufacturing line at the facility.

Consistent with other Subpart NNN determinations by USEPA for similar wool fiberglass manufacturing facilities elsewhere, the following is the rationale that was used for the Subpart NNN non-applicability determination relating to the starch-based binder conversion. With the switch to a starch-based binder system from a phenol-formaldehyde binder, the facility no longer produces a bonded product and, therefore, does not produce building insulation as defined per Subpart NNN. Because the facility no longer produces building insulation per Subpart NNN, it does not meet the definition of a rotary spin manufacturing line. If there is no rotary spin manufacturing line or flame attenuation manufacturing line located at the facility, then the facility does not meet the definition of a wool fiberglass manufacturing facility in Subpart NNN. Additionally, since the facility is no longer defined as a wool fiberglass manufacturing facility, as a result of the switch to a starch-based binder (i.e., non-phenol, non-formaldehyde), then the glass-melting furnaces located at the facility are no longer subject to Subpart NNN because these furnaces are no longer located at a wool fiberglass manufacturing facility.

## Item 4-4.7:

Compliance Certification shall include the following monitoring:

Capping: Yes

**New York State Department of Environmental Conservation**

**Permit ID: 4-0122-00004/00039**

**Facility DEC ID: 4012200004**

Monitoring Type: RECORD KEEPING/MAINTENANCE PROCEDURES

Monitoring Description:

Within 180 days of commencing implementation of the starch-based binder formulation, the facility owner or operator shall conduct VOC emission testing/analysis on the forming, curing, and cooling sections (includes smoke strippers) of each manufacturing line (DM-1 and DM-2) in order to establish associated emission factors in pounds of VOC per pound of binder solids applied. Such emission factors will be used for determining the maximum binder solids application rate (tons of binder solids applied per year) necessary to maintain emissions to less than the VOC emissions limit for the binder change project as set forth elsewhere in this permit. An acceptable VOC testing protocol must be submitted to the department at least thirty (30) days prior to conducting such testing. Testing/analysis results must be reported to the department within sixty (60) days following the completion of the testing. The testing results must also be included in the semi-annual reporting and annual compliance certification required in this permit.

While submission of an acceptable testing protocol is required as explained above, the facility anticipates using the following method for the testing of VOC emissions from the new starch-based binder formulation:

The method consists of a Method 5E (or equivalent) sampling train configured for total organic carbon (TOC) analysis of the back half, combined with a Method 25A (or equivalent) analyzer on a portion of the airstream exiting the Method 5E impinger train.

The 0.1 N NaOH impinger contents of the Method 5E train can be analyzed for TOC, following the protocol described in Method 5E. In addition, a portion of the impinger catch can be analyzed using methods such as Gas Chromatography with Flame Ionization Detection (GC-FID) where analytes are known. A portion of the 0.1 N NaOH impinger catch can also be extracted and analyzed by Gas Chromatography-Mass Spectrometry to permit identification of compounds, similar to EPA Method 8270, a water method for determining semi-volatiles. Finally, ion chromatography can be applied to the impinger catch to separate analytes such as formic acid and acetic acid. Other techniques are possible, depending upon the nature of the analytes. Polar and semi-volatile compounds will be collected by the 0.1 N NaOH impinger train. These analysis tools will establish a typical mass to carbon ratio. Once a typical mass to carbon ratio for the Method 5E catch is established, it will be used to apply to the

**Facility DEC ID: 4012200004**

Method 5E results when future VOC testing is required.  
Results will be stated as lb/hr VOC.

Non-polar compounds, such as light hydrocarbons will not be collected, and they will be measured by the Method 25A FID train. The Method 25A FID train will be calibrated as propane and the results specified as lb/hr VOC. Corrections for methane or ethane will be made before the results are specified.

Total VOC emissions will be the sum of the Method 5E results and the Method 25A results specified as lb/hr VOC.

The following calculation will be used for the scaling factor determination of the hourly VOC rate:

Given the following:

- Molecular weight of each known compound
  - Number of carbons in each known compound
  - Mass of each compound
- 1) Calculate the mass of carbon contributed by each compound
  - 2) Sum up the total mass of carbon
  - 3) Calculate the percentage (%) of total mass contributed by each compound
  - 4) Calculate the carbon to mass ratio for each compound (scaling factor for that individual compound)
  - 5) Calculate the contribution to the scaling factor of each compound by multiplying the individual mass to carbon ratio by its percentage (%) of the total mass
  - 6) Sum up all the individual contributions to obtain the scaling factor for the mix

**Item 26.7:**

Compliance Certification shall include the following monitoring:

Capping: Yes

Monitoring Type: RECORD KEEPING/MAINTENANCE PROCEDURES

Monitoring Description:

The purpose of this cap is to limit the VOC emissions increase from all process sources affected by the starch-based binder change project to less than the 6 NYCRR Part 231 significant project threshold of 40 tons per year, thereby avoiding the lowest achievable emission rate and offset requirements of 6 NYCRR 231-6. Therefore, the increase in potential VOC emissions from the affected process sources associated with this project will be limited to no more than 39 tons per year. When added to the two-year average baseline emissions of 59.78 tpy (from the 2005-2006 facility emissions statements) for the affected process sources, the total VOC emissions from the affected process sources shall not exceed 98.78 tons per year, as a rolling 12-month average.

To demonstrate compliance with the rolling 12-month average VOC emissions limit of 98.78 tons per year, an approach to develop a limitation on the amount of corresponding binder solids will be used (where binder solids is defined as all binder ingredients that are not water). As described elsewhere in this permit, VOC emissions testing will be conducted on the forming, curing, and cooling sections of the DM-1 and DM-2 manufacturing lines following the completion of the binder change project. The results of the VOC testing for the forming, curing, and cooling sections will be summed and normalized based on the binder solids application rates during the tests, such that an emission factor in pounds of VOC emitted per pound of binder solids applied (lb VOC/lb binder solids applied) will be established for each

Facility DEC ID: 4012200004

manufacturing line. The rolling 12-month average VOC emissions limit of 98.78 tons per year will then be divided by the sum of line-specific emission factors to determine the maximum binder solids application rate (tons of binder solids applied per year) that will be allowed in order to maintain emissions to less than the VOC emissions limit of 98.78 tons per year.

The detailed calculation approach in support of this capping monitoring condition is delineated in a July 2010 amendment to "Appendix F - VOC Documentation" of the facility application for a Title V permit modification addressing the starch-based binder change project which was submitted to the Department in December 2009.

Department reserves the right to perform or require the performance of a Method 9 opacity evaluation at any time during facility operation.

The permittee will conduct daily observations of visible emissions from the emission unit, process, etc. to which this condition applies at the monitoring frequency stated below while the process is in operation. The permittee will investigate, in a timely manner, any instance where there is cause to believe that visible emissions have the potential to exceed the opacity standard.

The permittee shall investigate the cause, make any necessary corrections, and verify that the excess visible emissions problem has been corrected. If visible emissions with the potential to exceed the standard continue, the permittee will conduct a Method 9 assessment within the next operating day of the sources associated with the potential noncompliance to determine the degree of opacity and will notify the NYSDEC if the method 9 test indicates that the opacity standard is not met.

Records of visible emissions observations (or any follow-up method 9 tests), investigations and corrective actions will be kept on-site. Should the Department determine that permittee's record keeping format is inadequate to demonstrate compliance with this condition, it shall provide written notice to the permittee stating the inadequacies, and permittee shall have 90 days to revise its prospective record keeping format in a manner acceptable to the Department.

control practices for minimizing emissions. During a period of startup, shutdown, or malfunction, this general duty to minimize emissions requires that the owner/operator reduce emissions from the affected source to the greatest extent which is consistent with safety and good air pollution control practices. The general duty to minimize emissions during a period of startup, shutdown, or malfunction does not require the owner/operator to achieve emission levels that would be required by the applicable standard at other times if this is not consistent with safety and good air pollution control practices, nor does it require the owner/operator to make any further efforts to reduce emissions if levels required by the applicable standard have been achieved. Determination of whether such operation and maintenance procedures are being used will be based on information available to the NYSDEC which may include, but is not limited to, monitoring results, review of operation and maintenance procedures (including the startup, shutdown, and malfunction plan required in §63.6(e)(6)), review of operation and maintenance records, and inspection of the source.

Malfunctions must be corrected as soon as practicable after their occurrence. To the extent that an unexpected event arises during a startup, shutdown, or malfunction, an owner/operator must comply by minimizing emissions during such a startup, shutdown, and malfunction event consistent with safety and good air pollution control practices.

Operation and maintenance requirements established pursuant to section 112 of the Clean Air Act are enforceable independent of emissions limitations or other requirements in relevant standards.

**Condition 44: Startup, Shutdown and Malfunction**

Consult 40 CFR 63.6(e)(3) (i through viii) for specific requirements regarding SSM plans.

efficiency of a control device, the facility must determine the organic HAP mass fraction of each coating material "as-purchased" by one of the following procedures:

- 1) The facility may test the coating material in accordance with Method 311 of appendix A of 40CFR63. This determination may be done by the manufacturer of the coating material and the results provided to the owner/operator. The organic HAP content must be calculated according to the procedures and criteria in §63.3360(c)(1)(i)-(iii).

This determination may be performed by the manufacturer of the coating and the results provided to the affected source.
- 3) The facility may use formulation data to determine the organic HAP mass fraction of a coating material. Formulation data may be provided to the owner/operator by the manufacturer of the material.
- 4) The facility must also determine the organic HAP mass fraction of each coating material "as-applied" by assuming the as-applied organic HAP mass fraction is equal to the as-purchased organic HAP mass fraction if the as-purchased coating is applied to the web without adding solvents or other materials. Otherwise, the as-applied organic HAP mass fraction must be calculated using Equation 1a of §63.3370.

Compliance Certification shall include the following monitoring:

Capping: Yes

Monitoring Type: RECORD KEEPING/MAINTENANCE PROCEDURES

Monitoring Description:

FOR THE PAST PROJECT THAT INVOLVED THIS EMISSION UNIT, FUTURE POTENTIAL MINUS PRIOR ACTUAL EMISSIONS ARE CAPPED AT LESS THAN THE 15 TON/YR SIGNIFICANCE THRESHOLD FOR PM10 TO AVOID ATTAINMENT NEW SOURCE REVIEW (PSD). **Effective between the dates of 09/18/2015 and 11/04/2015**

**Applicable State Requirement: 6 NYCRR 201-1.4**

**Item 10-18.1:**

(a) The facility owner or operator shall take all necessary and appropriate actions to prevent the emission of air pollutants that result in contravention of any applicable emission standard during periods of start-up, shutdown, or malfunction.

(b) The facility owner or operator shall compile and maintain records of all equipment malfunctions, maintenance, or start-up/shutdown activities when they can be expected to result in an exceedance of any applicable emission standard, and shall submit a report of such activities to the department when requested to do so, or when so required by a condition of a permit issued for the corresponding air contamination source. Such reports shall state whether any violations occurred and, if so, whether they were unavoidable, include the time, frequency and duration of the maintenance and/or start-up/shutdown activities, and an estimate of the emission rates of any air contaminants released. Such records shall be maintained for a period of at least five years

and made available for review to department representatives upon request. Facility owners or operators subject to continuous stack monitoring and quarterly reporting requirements need not submit additional reports for equipment maintenance or start-up/shutdown activities for the facility to the department.

(c) In the event that emissions of air contaminants in excess of any emission standard in this Subchapter occur due to a malfunction, the facility owner or operator shall compile and maintain records of the malfunction and notify the department as soon as possible during normal working hours, but not later than two working days after becoming aware that the malfunction occurred. When requested by the department, the facility owner or operator shall submit a written report to the department describing the malfunction, the corrective action taken, identification of air contaminants, and an estimate of the emission rates.

(d) The department may also require the owner or operator to include, in reports described under Subdivisions (b) and (c) of this Section, an estimate of the maximum ground level concentration of each air contaminant emitted and the effect of such emissions.

(e) A violation of any applicable emission standard resulting from start-up, shutdown, or malfunction conditions at a permitted or registered facility may not be subject to an enforcement action by the department and/or penalty if the department determines, in its sole discretion, that such a violation was unavoidable. The actions and recordkeeping and reporting requirements listed above must be adhered to in such circumstances.

## **Condition 133: Unavoidable noncompliance and violations** **Effective between the dates of 11/05/2010 and 11/04/2015**

### **Applicable State Requirement: 6 NYCRR 201-1.4**

#### **Item 133.1:**

At the discretion of the commissioner a violation of any applicable emission standard for necessary scheduled equipment maintenance, start-up/shutdown conditions and malfunctions or upsets may be excused if such violations are unavoidable. The following actions and recordkeeping and reporting requirements must be adhered to in such circumstances.

(a) The facility owner and/or operator shall compile and maintain records of all equipment maintenance or start-up/shutdown activities when they can be expected to result in an exceedance of any applicable emission standard, and shall submit a report of such activities to the commissioner's representative when requested to do so in writing or when so required by a condition of a permit issued for the corresponding air contamination source except where conditions elsewhere in this permit which contain more stringent reporting and notification provisions for an applicable requirement, in which case they supercede those stated here. Such reports shall describe why the violation was unavoidable and shall include the time, frequency and duration of the maintenance and/or start-up/shutdown activities and the identification of air contaminants, and the estimated emission rates. If a facility owner and/or operator is subject to continuous stack monitoring and quarterly reporting requirements, he need not submit reports for equipment maintenance or start-up/shutdown for the facility to the commissioner's representative.

(b) In the event that emissions of air contaminants in excess of any emission standard in 6 NYCRR Chapter III Subchapter A occur due to a malfunction, the facility owner and/or operator shall report such malfunction by telephone to the commissioner's representative as soon

as possible during normal working hours, but in any event not later than two working days after becoming aware that the malfunction occurred. Within 30 days thereafter, when requested in writing by the commissioner's representative, the facility owner and/or operator shall submit a written report to the commissioner's representative describing the malfunction, the corrective action taken, identification of air contaminants, and an estimate of the emission rates. These reporting requirements are superseded by conditions elsewhere in this permit which contain reporting and notification provisions for applicable requirements more stringent than those above.

(c) The Department may also require the owner and/or operator to include in reports described under (a) and (b) above an estimate of the maximum ground level concentration of each air contaminant emitted and the effect of such emissions depending on the deviation of the malfunction and the air contaminants emitted.

(d) In the event of maintenance, start-up/shutdown or malfunction conditions which result in emissions exceeding any applicable emission standard, the facility owner and/or operator shall take appropriate action to prevent emissions which will result in contravention of any applicable ambient air quality standard. Reasonably available control technology, as determined by the commissioner, shall be applied during any maintenance, start-up/shutdown or malfunction condition subject to this paragraph.

(e) In order to have a violation of a federal regulation (such as a new source performance standard or national emissions standard for hazardous air pollutants) excused, the specific federal regulation must provide for an affirmative defense during start-up, shutdowns, malfunctions or upsets.

**Item 4-14.2:**

Compliance Demonstration shall include the following monitoring:

Monitoring Type: WORK PRACTICE INVOLVING SPECIFIC  
OPERATIONS

Monitoring Description:

In accordance with the approved Reasonably Available Control Technology (RACT) analysis dated November 2010, the existing furnace oxy-fuel firing control technology is determined to be NO<sub>x</sub> RACT for the DM-1 and DM-2 glass melting furnaces (processes OX1 and OX2). Each furnace is required to achieve a maximum NO<sub>x</sub> emission limit of 4.0 pounds NO<sub>x</sub> per ton of glass pulled on a block 24-hour basis, which is the Ozone Transport Commission (OTC) guideline for fiberglass manufacturing plants. The facility owner or operator shall demonstrate compliance with this NO<sub>x</sub> RACT emission limit, which is to be implemented by July 1, 2012, by measuring NO<sub>x</sub> emissions with a continuous emissions monitoring system (CEMS) that complies with the requirements of 6 NYCRR Part 220-2.4(c). Such NO<sub>x</sub> emissions measurements in combination with the tracking of daily glass production rates, as required elsewhere in this permit, are to be used to calculate ongoing actual NO<sub>x</sub> emission rates in pounds NO<sub>x</sub> per ton of glass pulled.

Approval of the RACT analysis is conditioned upon the requirement that the facility owner or operator shall establish a more representative, facility-specific NO<sub>x</sub> emission limit (pounds NO<sub>x</sub> per ton glass pulled) on a 30-day rolling average basis for each furnace. This shall be based from the collection of twelve (12) consecutive months of NO<sub>x</sub> emissions CEMS data, beginning no later than 60 days after commencement of operation of the required CEMS, in combination with the tracking of daily glass production rates. Establishment of an approvable facility-specific NO<sub>x</sub> RACT emission limit for each furnace shall be completed and submitted to the department within 30 days following the 12-month CEMS data collection period. Once established and approved by the department, the permit will be modified to reflect the more representative, facility-specific NO<sub>x</sub> emission limit.

Compliance Demonstration shall include the following monitoring:

Monitoring Type: RECORD KEEPING/MAINTENANCE PROCEDURES

Monitoring Description:

The owner or operator of a glass melting furnace shall install, calibrate, evaluate, operate, and maintain a continuous emissions monitoring system (CEMS), in accordance with the provisions of 40 CFR part 60, appendices A, B and F, for measuring NO<sub>x</sub> and shall record the output of the system.

As part of its application for a permit or permit modification, the owner or operator of a glass melting furnace shall submit for department approval a CEMS plan.

The owner or operator of a glass melting furnace shall submit for department approval a CEMS certification protocol at least 60 days prior to CEMS certification testing. The certification protocol shall include the location of and specifications for each instrument or device, as well as procedures for calibration, operation, data evaluation, and data reporting.

The procedures in subparagraphs (i) through (v) below shall be used for determining compliance with the NO<sub>x</sub> RACT emission limit established under section 6 NYCRR Part 220-2.3(a).

(i) The owner or operator of a glass melting furnace shall determine compliance daily on a 30 day rolling average basis. The 30 day rolling averages shall be calculated by dividing 30 day total NO<sub>x</sub> emissions by 30 day total glass production. Only days when the furnace operates shall be included in the 30 day rolling averages.

(ii) At a minimum, valid CEMS data shall be obtained for 90 percent of the operating hours in each calendar quarter that the subject facility is operating.

(iii) All valid CEMS data shall be used in calculating emission rates even if the minimum data requirements of subparagraph (ii) above are not met.

(iv) Along with any specific additional data requirements mandated by the department for a particular glass melting furnace, annual recertifications, quarterly accuracy, and daily calibration drift tests shall be performed in accordance with 40 CFR part 60, appendix F.

(v) When NO<sub>x</sub> emissions data are not obtained because of CEMS downtime, or for periods when no valid CEMS data is available, emission data shall be obtained by using the 90th percentile value of all CEMS NO<sub>x</sub> emission data collected over the last 180 days.

In addition to the requirements of subparagraphs (i) through (iii) below, the owner or operator of a glass melting furnace shall comply with the CEMS recordkeeping and reporting requirements of 40 CFR part 60, subpart A and appendix F.

(i) The owner or operator of a glass melting furnace shall notify the department of the planned initial start-up date of any new CEMS.

(ii) Emissions, monitoring, and operating parameter records or measurements required by this Subpart and any additional parameters required by the department shall be maintained for at least five years and made available to the department upon request.

(iii) On a semi-annual basis, the owner or operator of a glass melting furnace shall tabulate and summarize applicable emissions, monitoring, and operating parameter measurements recorded during the preceding six months, and submit these records to the department. These records shall be submitted in a format acceptable to the department and shall include:

(a) the 30 day rolling average NO<sub>x</sub> emissions as specified under paragraph (4) of this subdivision;

(b) identification of the operating hours when NO<sub>x</sub> emissions data are not included in a calculation of the 30 day rolling average emissions and the reasons for not including that data;

(c) a comparison of the NO<sub>x</sub> emissions to the NO<sub>x</sub> RACT emissions limit(s);

Monitoring Description:

There is no projected increase in non-VOC emissions as a result of the starch-based binder formulation and conversion project. Permit ID: 4-0122-00004/00039

Facility DEC ID: 4012200004

EU3SO<sub>2</sub> = DM1 Forming,Curing,Cooling,SmokeStripper SO<sub>2</sub> Emissions (Tons/rolling 12-month period)

EU12SO<sub>2</sub> = DM2 Oxy Fuel Furnace SO<sub>2</sub> Emissions (Tons/rolling 12-month period)

EU13SO<sub>2</sub> = DM2 Mixing Chamber which comprises Forming and Curing SO<sub>2</sub> Emissions (Tons/rolling 12-month period)

EU14SO<sub>2</sub> = DM2 Cooling and Smoke Stripper SO<sub>2</sub> Emissions (Tons/rolling 12-month period)

The SO<sub>2</sub> emissions from the glass furnaces (EU2 and EU12) are calculated based on the following equation:

Equation 2 – Furnace SO<sub>2</sub> (EU2SO<sub>2</sub> and EU12SO<sub>2</sub>) Emissions Monitoring Method

$$= (NGusage \times NGEF) + (Glasspull \text{ rate} \times FurnaceSO_2)$$

Where:

NGusage = Natural gas usage of each furnace (MMscf/rolling 12-month period)

NGEF = AP-42 Natural gas emission factor for external combustion sources (lb SO<sub>2</sub>/MMscf natural gas usage)

Glasspull rate = Glass pull rate of each furnace (Tons/rolling 12-month period)

FurnaceSO<sub>2</sub> = SO<sub>2</sub> emission factor (lb SO<sub>2</sub>/ton glass) for SO<sub>2</sub> released from glass batch materials for each furnace, developed based on most recent stack test results

The SO<sub>2</sub> emissions from the forming, curing, cooling and smoke stripper sections associated with each source (EU3, EU13, and EU14) are calculated based on the following equation:

Equation 3 – Forming, Curing, Cooling and Smoke Stripper section SO<sub>2</sub> (EU3SO<sub>2</sub>, EU13SO<sub>2</sub> and EU14SO<sub>2</sub>) Emissions Monitoring Method

$$= (NGrate \times \text{Forming,Curing,Cooling,SmokeStripperSO}_2)$$

Where:

NGrate = natural gas that is used by the fiberizer burners (applicable to Forming sections' SO<sub>2</sub>) or the total used by the oven zone burners, stack burners and incinerator burners (applicable to Curing, Cooling and Smoke Stripper SO<sub>2</sub>) (millions of cubic feet of natural gas per rolling 12-month period)

Forming,Curing,Cooling,SmokeStripperSO<sub>2</sub> = SO<sub>2</sub> emission factor for the forming, curing, cooling and smoke stripper section of each source (lb SO<sub>2</sub> per million cubic feet of natural gas used by the source applicable burner system), developed based on most recent stack test results
