Permit Review Report
Permit ID: 5-4154-00002/01743  Renewal Number: 1  Modification Number: 1 10/09/2008

Facility Identification Data
Name: MOMENTIVE PERFORMANCE MATERIALS
Address: 260 HUDSON RIVER RD
WATERFORD, NY 12188

Owner/Firm
Name: MPM SILICONES LLC
Address: 260 HUDSON RIVER RD
WATERFORD, NY 12188, USA
Owner Classification: Corporation/Partnership

Permit Contacts
Division of Environmental Permits:
Name: W RICHARD SPEIDEL
Address: NYSDEC

Permit Description
Introduction
The Title V operating air permit is intended to be a document containing only enforceable terms and conditions as well as any additional information, such as the identification of emission units, emission points, emission sources and processes, that makes the terms meaningful. 40 CFR Part 70.7(a)(5) requires that each Title V permit have an accompanying "...statement that sets forth the legal and factual basis for the draft permit conditions". The purpose for this permit review report is to satisfy the above requirement by providing pertinent details regarding the permit/application data and permit conditions in a more easily understandable format. This report will also include background narrative and explanations of regulatory decisions made by the reviewer. It should be emphasized that this permit review report, while based on information contained in the permit, is a separate document and is not itself an enforceable term and condition of the permit.

Attainment Status
MOMENTIVE PERFORMANCE MATERIALS is located in the town of WATERFORD in the county of SARATOGA.
The attainment status for this location is provided below. (Areas classified as attainment are those that meet all ambient air quality standards for a designated criteria air pollutant.)
### Criteria Pollutant | Attainment Status
--- | ---
Particulate Matter (PM) | ATTAINMENT
Particulate Matter < 10µ in diameter (PM10) | ATTAINMENT
Sulfur Dioxide (SO2) | ATTAINMENT
Ozone* | MARGINAL NON-ATTAINMENT
Oxides of Nitrogen (NOx)** | ATTAINMENT
Carbon Monoxide (CO) | ATTAINMENT

* Ozone is regulated in terms of the emissions of volatile organic compounds (VOC) and/or oxides of nitrogen (NOx) which are ozone precursors.

** NOx has a separate ambient air quality standard in addition to being an ozone precursor

### Facility Description
Momentive Performance Materials operates a silicone production facility (sic 2821) located in Saratoga County, New York, in the town of Waterford. The plant is approximately 12 miles north of Albany. The site produces silicone products and other materials including resins, fluids, dispersions, emulsions, heat curing elastomers, room temperature vulcanizing (rtv) elastomers and fumed silica. The site has continuous and batch chemicals processes, compounding, finishing and packaging operations, and steam generation capability.

Major emissions include: Carbon Monoxide (CO), Sulfur Dioxide (SO2), Volatile Organic Compounds (VOCs), Hazardous Air Pollutants (HAPs), Oxides of Nitrogen (NOx), Particulate Matter (PM) and Particulate Matter less than 10 microns (PM-10).

Emission unit listing and a brief description:

**C-27018:** This unit consists of the following production areas: Methyl Chloride, Gaseous Dihydrolysis (GDH), Liquid Dihydrolysis (LDH), Siloxane Oil, the Area 38 tank farm, the B30 Polykettle systems, and the B24A MQ Resin system. The unit also includes the following control devices and their associated equipment: the MCS Vent Incinerator, MCS Vent Scrubber, the Fixed Box (#2) Hazardous Waste Incinerator, and the Rotary Kiln Hazardous Waste Incinerator. Sources in this unit include storage tanks, distillation columns, process vessels, Synthetic Organic Chemical Manufacturing Industry (SOCMI) distillation columns, SOCMI reactors, and SOCMI wastewater. Applicable regulations for unit C-27018 include: the Hazardous Organic NESHAP (HON) under 40 CFR 63 Subparts F, G, and H, the Hazardous Waste Incinerator MACT under 40 CFR 63 Subpart EEE, the Miscellaneous Organic NESHAP under 40 CFR Subpart FFFF, New Source Performance Standards (NSPS) for SOCMI distillation columns (40 CFR 60 Subpart NNN), SOCMI reactors (40 CFR 60 Subpart RRR), and volatile organic liquid (VOL) storage tanks (40 CFR 60 Subpart Kb), Volatile Organic Compound Reasonably Available Control Technology (VOC RACT) under 6 NYCRR Subpart 212, sulfur fuel limitations under 6 NYCRR Subpart 225, VOC RACT for storage tanks under 6 NYCRR Subpart 229, and State Air Toxics under 6 NYCRR Subpart 212.

**C-27035:** Emission unit C-27035 is comprised of several aboveground storage tanks that are used to store acids. All of the tanks are located in the HCL Tank Farm. All but one of the tanks vents to a packed tower water scrubber (EP27035). One tank vents to an eductor (EP27039) which is piped to the chemical process sewer. The emission
unit also contains three locations within the tank farm, which allow for scrapping of acid to the chemical process sewer. The applicable regulations are the State Air Toxics under 6 NYCRR Subpart 212, the Miscellaneous Organic NESHAP under 40 CFR Subpart FFFF, and New Source Performance Standards (NSPS) for volatile organic liquid (VOL) storage tanks under 40 CFR 60 Subpart Kb.

C-61007: Emission unit C-61007 includes the Silicon Grinding and Fines Passivation area. In the area, Silicon Grinding area, silicon metal is ground, screened, and transferred to silos. In the Fines Passivation area, mixers are used to mix fines to neutralize and harden the material. Processes include mixers, dust collectors, and an unloading station. Applicable regulations for this unit include emissions limitations for capping under Prevention of Significant Deterioration (40 CFR Subpart 52), the Miscellaneous Organic NESHAP under 40 CFR Subpart FFFF, and particulate emissions limitations under 6 NYCRR 212.

C-62008: Emission unit C-62008 includes all equipment associated with the methylchlorosilane (MCS) reactor systems (MCS II system, MCS III system and MCS IV system) that are not associated with the control devices in unit C-27018. Sources include process vessels, feed hoppers, and hot oil furnaces. Applicable regulations for this unit include emissions limitations for capping under Prevention of Significant Deterioration (40 CFR Subpart 52) and Non-Attainment New Source Review under 6 NYCRR 231-2, the Miscellaneous Organic NESHAP under 40 CFR Subpart FFFF, and particulate limitations under 6 NYCRR 212.

C-62014: This unit consists of sources in the Trichlorosilanes (TCS) and Fumed Silica production areas. The TCS area currently consists of exempt sources. The Fumed Silica area consists of a scrubber and various solids handling equipment. Applicable regulations include State Air Toxics under 6 NYCRR Subpart 212 and the Hydrochloric Acid Production MACT under NNNNN.

EGNRTR: This unit consists of emergency generator sources. They are subject to the Reciprocating Industrial Combustion Engine MACT of 40 CFR 63 Subpart ZZZZ.

F-INISH: This unit consists of intermediate and final production of silicone products and materials, including resins, fluids, dispersions, emulsions, heat curing elastomers, room temperature vulcanizing (rtv) elastomers, sealants, and treated fumed silica. Also includes various maintenance shops and individual maintenance sources (such as degreasers). Process sources include storage vessels, batch reactors, process tanks, mixers, feed hoppers, filter presses, drumming operations, liquid add stations, process strippers, unloading stations, packaging operations, maintenance degreasers, and all of the associated control equipment. Applicable regulations include the following: emissions limitations for capping under Prevention of Significant Deterioration (40 CFR Subpart 52) and Non-Attainment New Source Review under 6 NYCRR 231-2, New Source Performance Standards (NSPS) for volatile organic liquid (VOL) storage tanks under 40 CFR 60 Subpart Kb, Volatile Organic Compound Reasonably Available Control Technology (VOC RACT) under 6 NYCRR Subpart 212, State Air Toxics under 6 NYCRR Subpart 212, VOC RACT for Storage Tanks Under 6 NYCRR 229, the Miscellaneous Organic NESHAP under 40 CFR Subpart FFFF, and VOC RACT for Part Cleaners under 6 NYCRR 226.

H-OFURN: This unit consists of the plant’s hot oil furnaces not associated with MCS. These furnaces are subject to 6 NYCRR 227 and the Industrial Boiler MACT.

T-13004: Unit 13004 consists of various pilot plant processes located in Building 13. Sources include process vessels, filters, and local extraction discharges. The applicable regulations include State Air Toxics under 6 NYCRR Subpart 212.

T-14009: This unit consists of equipment in the facility's Pilot Plant, located in Buildings 14, 15 and 16. The Pilot Plant makes developmental/experimental products for evaluation, and scaled-down batches of problem production grades to develop process adjustments. Scaled down batches of commercial products are also made here. Processes are small-volume sources including process vessels, strippers, distillation columns, mixers, and reactors. The applicable regulations include State Air Toxics under 6 NYCRR Subpart 212.
U-28002: Emission Unit U28002 consists of Boilers 13 and 18 and a #2 Fuel Oil storage tank. Applicable regulations include emissions limitations for capping under Prevention of Significant Deterioration (40 CFR Subpart 52) and Non-Attainment New Source Review under 6 NYCCR 231-2, New Source Performance Standards (NSPS) for volatile organic liquid (VOL) storage tanks under 40 CFR 60 Subpart Kb, NSPS regulations for industrial boilers under 40 CFR 60 Subpart Db, NOx RACT under 6 NYCCR 227-2, particulate limitations under 6 NYCCR 227-1, NOx Budget regulations under 6 NYCCR 227-3 and 204, the Industrial Boiler MACT, NOx CAIR rule during the ozone season under 6 NYCCR 243, and fuel limitations for sulfur under 6 NYCCR 225.

U-28003: Emission Unit U28003 consists of boilers 14, 15, 16, and 17. Applicable regulations include Prevention of Significant Deterioration (40 CFR Subpart 52) and Non-Attainment New Source Review under 6 NYCCR 231-2, NOx RACT under 6 NYCCR 227-2, particulate limitations under 6 NYCCR 227-1, the Industrial Boiler MACT, and fuel limitations for sulfur under 6 NYCCR 225.

W-97004: This emission unit is the wastewater treatment process system of the waste handling area. The wastewater treatment plant is a physical/chemical treatment system consisting of pH neutralization, oil and grease separation, clarification, and air stripping operations. The applicable regulations are New Source Performance Standards (NSPS) for Volatile Organic Liquid (VOL) storage tanks under 40 CFR 60 Subpart Kb, State Air Toxics under 6 NYCRR Subpart 212, the Miscellaneous Organic NESHAP under 40 CFR Subpart FFFF, and Volatile Organic Compound Reasonably Available Control Technology (VOC RACT) under 6 NYCRR Subpart 212.

Permit Structure and Description of Operations

The Title V permit for MOMENTIVE PERFORMANCE MATERIALS is structured in terms of the following hierarchy: facility, emission unit, emission point, emission source and process.

A facility is defined as all emission sources located at one or more adjacent or contiguous properties owned or operated by the same person or persons under common control. The facility is subdivided into one or more emission units (EU). Emission units are defined as any part or activity of a stationary facility that emits or has the potential to emit any federal or state regulated air pollutant. An emission unit is represented as a grouping of processes (defined as any activity involving one or more emission sources (ES) that emits or has the potential to emit any federal or state regulated air pollutant). An emission source is defined as any apparatus, contrivance or machine capable of causing emissions of any air contaminant to the outdoor atmosphere, including any appurtenant exhaust system or air cleaning device. [NOTE: Indirect sources of air contamination as defined in 6 NYCRR Part 203 (i.e. parking lots) are excluded from this definition]. The applicant is required to identify the principal piece of equipment (i.e., emission source) that directly results in or controls the emission of federal or state regulated air pollutants from an activity (i.e., process). Emission sources are categorized by the following types:

- combustion  - devices which burn fuel to generate heat, steam or power
- incinerator  - devices which burn waste material for disposal
- control            - emission control devices
- process           - any device or contrivance which may emit air contaminants

that is not included in the above categories.

MOMENTIVE PERFORMANCE MATERIALS is defined by the following emission unit(s):

Emission unit C27018 - Chemical operations and sources requiring incineration control under MON MACT. The MCS Vent incinerator, MCS vent scrubber, Fixed Box incinerator no. 2, and the rotary kiln incinerator are included in this unit.

Emission unit C27018 is associated with the following emission points (EP):

14006, 21005, 21011, 22001, 23002, 23005, 24103, 24105, 24113, 24120, 24121, 24132, 24133, 24134, 24135, 24137, 24139, 24140, 24207, 24208, 24305, 24307, 24308, 24309, 24310, 24311, 24312, 24409, 24423, 24702,
It is further defined by the following process(es):

Process: 001 is located at Building 71 - This process represents FOM 001, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).

Process: 002 is located at Building 71 - This process represents FOM 002, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).

Process: 003 is located at Building 71 - Equipment for Family of Material #003, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 005 is located at Building 78 - Equipment for Family of Material #005, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 006 is located at Building 78 - Equipment for Family of Material #006, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 007 is located at Building 30 - Equipment for Family of Material #007, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 008 is located at Building 37 - Equipment for Family of Material #007, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 009 is located at Building 37 - Equipment for Family of Material #009, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 010 is located at Building 37 - Equipment for Family of Material #010, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 011 is located at Building 37 - Equipment for Family of Material #011, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 012 is located at Building 37 - Equipment for Family of Material #012, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 013 is located at Building 76 - Equipment for Family of Material #013, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 022 is located at Building 76 - Equipment for Family of Material #022, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 023 is located at Building 30 - Equipment for Family of Material #023, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 024 is located at Building 30 - Equipment for Family of Material #024, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF.

Process: 025 is located at Building 30 - Equipment for Family of Material #025, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of
Process: 026 is located at Building 30 - Equipment for Family of Material #026, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 027 is located at Building 30 - Equipment for Family of Material #027, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 031 is located at Building 30 - This process represents FOM 031, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).

Process: 032 is located at Building 30 - Equipment for Family of Material #032, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 033 is located at Building 30 - Equipment for Family of Material #033, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 035 is located at Building 30 - Equipment for Family of Material #035, which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 036 is located at Building 30 - Equipment for Family of Material #036 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 037 is located at Building 30 - Equipment for Family of Material #037 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 039 is located at Building 37 - Equipment for Family of Material #039 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 040 is located at Building 76 - Equipment for Family of Material #040 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 042 is located at Building 30 - Equipment for Family of Material #042 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 043 is located at Building 30 - Equipment for Family of Material #043 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 045 is located at Building 30 - Equipment for Family of Material #045 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 046 is located at Building 71 - Equipment for Family of Material #046 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 047 is located at Building 71 - Equipment for Family of Material #047 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 048 is located at Building 71 - Equipment for Family of Material #048 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF. This process operates out of buildings 30 and 78.
manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 76 and 78.
Process: 067 is located at Building 27 - Equipment for Family of Material #067 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 27, 35 and 70.
Process: 068 is located at Building 71 - Equipment for Family of Material #068 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 71 and 76.
Process: 071 is located at Building 24 - Equipment for Family of Material #071 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 072 is located at Building 24 - Equipment for Family of Material #072 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 073 is located at Building 21 - Equipment for Family of Material #073 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 21 and 35.
Process: 078 is located at Building 23 - Equipment for Family of Material #078 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 23, 24 and 24A.
Process: 080 is located at Building 23 - Equipment for Family of Material #080 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 23, 24, 24A and 71.
Process: 082 is located at Building 23 - Equipment for Family of Material #082 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 23, 24 and 24A.
Process: 083 is located at Building 24 - Equipment for Family of Material #083 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 084 is located at Building 37 - Equipment for Family of Material #084 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 085 is located at Building 76 - This process represents FOM 085, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 086 is located at Building 37 - Equipment for Family of Material #086 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 087 is located at Building 37 - Equipment for Family of Material #087 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 088 is located at Building 37 - Equipment for Family of Material #088 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 089 is located at Building 23 - Equipment for Family of Material #089 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 23, 24 and 24A.
Process: 090 is located at Building 61 - This process represents FOM 090, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 61 and 62.
Process: 093 is located at Building 23 - Equipment for Family of Material #093 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 094 is located at Building 37 - Equipment for Family of Material #094 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 095 is located at Building 71 - Equipment for Family of Material #095 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 096 is located at Building 37 - Equipment for Family of Material #096 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 097 is located at Building 30 - Equipment for Family of Material #097 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 30 and 78.
Process: 099 is located at Building 78 - Equipment for Family of Material #099 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 100 is located at Building 37 - Equipment for Family of Material #100 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 101 is Equipment for Family of Material #101 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 102 is located at Building 30 - Equipment for Family of Material #101 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 30 and 71.
Process: 103 is located at Building 71 - Equipment for Family of Material #103 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 105 is located at Building 30 - Equipment for Family of Material #105 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 106 is located at Building 24 - Equipment for Family of Material #106 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 24 and 37.
Process: 108 is located at Building 76 - Equipment for Family of Material #108 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 109 is located at Building 37 - Equipment for Family of Material #109 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 112 is located at Building 30 - Equipment for Family of Material #112 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 30, 37, 76 and 78.
Process: 113 is located at Building 37 - Equipment for Family of Material #113 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 37 and 76.
Process: 114 is located at Building 37 - Equipment for Family of Material #114 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 115 is located at Building 23 - Equipment for Family of Material #115 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 23, 24 and 24A.
Process: 116 is located at Building 78 - Equipment for Family of Material #116 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 117 is located at Building 71 - Equipment for Family of Material #117 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 119 is located at Building 23 - Equipment for Family of Material #119 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 23, 24, 24A and 71.
Process: 120 is located at Building 71 - Equipment for Family of Material #120 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 121 is located at Building 37 - Equipment for Family of Material #121 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 122 is located at Building 37 - Equipment for Family of Material #122 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 123 is located at Building 23 - Equipment for Family of Material #123 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 23, 24 and 24A.
Process: 124 is located at Building 37 - Equipment for Family of Material #124 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 125 is located at Building 37 - Equipment for Family of Material #125 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 127 is located at Building 37 - Equipment for Family of Material #127 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 128 is located at Building 24 - Equipment for Family of Material #128 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 24, 71 and 76.
Process: 129 is located at Building 37 - Equipment for Family of Material #129 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 130 is located at Building 37 - Equipment for Family of Material #130 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 131 is located at Building 78 - Equipment for Family of Material #131 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 132 is located at Building 78 - Equipment for Family of Material #132 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 133 is located at Building 78 - Equipment for Family of Material #133 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 134 is located at Building 78 - Equipment for Family of Material #134 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 135 is located at Building 76 - Equipment for Family of Material #135 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 137 is located at Building 30 - Equipment for Family of Material #137 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 139 is located at Building 71 - Equipment for Family of Material #139 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 141 is located at Building 30 - Equipment for Family of Material #141 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 142 is located at Building 31 - Equipment for Family of Material #142 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 143 is located at Building 30 - Equipment for Family of Material #143 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 146 is located at Building 34 - Equipment for Family of Material #146 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 148 is located at Building 30 - Equipment for Family of Material #148 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 149 is located at Building 30 - Equipment for Family of Material #149 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 150 is located at Building 76 - Equipment for Family of Material #150 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 151 is located at Building 71 - Equipment for Family of Material #151 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 152 is located at Building 71 - Equipment for Family of Material #152 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 153 is located at Building 71 - Equipment for Family of Material #153 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 154 is located at Building 71 - Equipment for Family of Material #154 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 156 is located at Building 71 - Equipment for Family of Material #156 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 158 is located at Building 76 - Equipment for Family of Material #158 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 160 is located at Building 30 - Equipment for Family of Material #160 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 161 is located at Building 30 - Equipment for Family of Material #161 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 162 is located at Building 30 - Equipment for Family of Material #162 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 30 and 78.

Process: 163 is located at Building 30 - Equipment for Family of Material #163 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 164 is located at Building 71 - Equipment for Family of Material #164 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 166 is located at Building 37 - Equipment for Family of Material #166 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 167 is located at Building 37 - Equipment for Family of Material #167 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 168 is located at Building 23 - Equipment for Family of Material #168 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF. This process operates out of buildings 23, 24 and 24A.

Process: 172 is located at Building 37 - Equipment for Family of Material #172 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 183 is located at Building 32 - Equipment for Family of Material #183 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 184 is located at Building 37 - Equipment for Family of Material #184 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 185 is located at Building 71 - Equipment for Family of Material #185 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 186 is located at Building 30 - Equipment for Family of Material #186 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 187 is located at Building 30 - Equipment for Family of Material #187 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 188 is located at Building 31 - Equipment for Family of Material #188 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 189 is located at Building 30 - Equipment for Family of Material #189 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.

Process: 201 is located at Building 30 - Heat exchange system. This process represents cooling water from heat exchange systems within the miscellaneous organic chemical manufacturing units (MCPUs) with C-27018 that are regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).

Process: 202 is located at Building 30 - Heat exchange system. This process represents cooling water from heat exchange systems within the miscellaneous organic chemical manufacturing units (MCPUs) within C-27035 that are regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).

Process: 205 is located at Building 30 - This process represents the management of Group 1 residues in containers. The Group 1 residues are generated by the miscellaneous organic chemical manufacturing units (MCPUs) in C-27035 that are regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).

Process: 206 is located at Building 30 - Batch polymer kettle, PK-9 with condenser receiver vents when the kettle is filled (during charging and chemical additions) and when purging (during drying). (4) Vacuum stripping with N2 purge.

Process: 213 is located at Building 37 - This process represents the management of Group 1 process wastewater that is generated by miscellaneous chemical manufacturing units (MCPUs) that are regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).

Process: 2171 is located at Building 30 - the bulk product storage tanks acetoxycatalyst metering tanks and acetoxycatalyst feed hoppers vent

02 - bulk product storage tanks and packaging machine feed hoppers which contain sealant-x product

04 - a caulker filling machine uses a small pressure vessel to fill caulkers with sealant.

Process: 400 is located at Building 34 - Equipment leaks. This process represents closed vent system, compressor, connector, pressure relief valve, pump, sampling connection, vessel and receiver, and valve leaks for the Methyl Chloride chemical manufacturing process unit.
Process: 401MCS to incinerators/scrubbers. This process consists of sources in the Methyl Chlorosilane operations area which vent to the waste incinerators, the MCS vent incinerator, or the MCS vent scrubber.

Process: 402 is located at Building 27 - Methanol storage tanks. Two storage tanks that supply Methanol to the Methyl Chloride reactors in building 34. Both tanks are equipped with an internal floating roof.

Process: 403 is located at Building 34 - Process wastewater. This process represents process wastewater from the Methyl Chloride chemical manufacturing process unit.

Process: 404 is located at Building 34 - Maintenance wastewater. This process represents maintenance wastewater from the Methyl Chloride chemical manufacturing process unit.

Process: 405 is located at Building 27 - Water scrubber, spent sulfuric storage tank and loading. Sulfuric acid fumes are vented from the head space of the spent sulfuric acid tank.

Process: 406 Heat exchange system. This process represents cooling water from heat exchange systems within the Methyl Chloride chemical manufacturing process unit.

Process: 420 LDH/Siloxane oil production. Insignificant emissions from the Cracker preheaters drain tank which receives water and Cyclic Siloxanes from preheaters on Crackers B C and D.

Process: 422 RKI Normal Operation

Process: 424 Fixed Box Normal Operation.

Process: 425 Fixed Box Maintenance Operation.

Process: 700 is located at Building 62 - Tank farm. Insignificant emissions from 30,000 gallon storage tank 539. Tank has a continuous Nitrogen purge.

Process: 701 Low boiling distillation and redistribution. This process consists of multiple distillation columns and two reactors in the low boiling distillation and redistribution area which vent to the waste incinerators or the MCS vent scrubber.

Process: 702 MCS IV reactor purge. This process consists of a purge on a reactor vessel.

Process: 703 MCS IV Methyl Chloride recovery column. This process consists of the MCS IV Methyl Chloride recovery column which vents to the MCS vent incinerator or the waste incinerator.

Process: 704 is located at Building 34 - Methanol recovery columns. Dual distillation columns which recover Methanol from water scrubber bottom product.

Process: 705 This process consists of slurry and Silane tanks which vent when filled (working losses) to the waste incinerators as an alternate and equivalent means of control.

Process: 706 is located at Building 27 - HCl compressor and GDH start up. This process represents Hydrogen Chloride fume scrubber for GDH start ups.

Process: 707 117/118 column system. Emissions from the 117/118 columns are transferred to the 547B knockout tank, where condensed vapors are collected. The remaining vapors are sent to an eductor water unit, where the gases are mixed with tempered water and are sent to the chemical sewer.

Process: 708 is located at Building 35 - LDH/Siloxanes oil production. This process represents distillation columns, crackers, Siloxane water removal systems, and neutralizer vents associated with LDH and Siloxanes oil production.

Process: 709 MCS IV Silicon feed hoppers. This process consists of two fresh Silicon feed hoppers in the MCS IV operational area.

Process: 710 Column 114 B Mono/Tri column. This process consists of the 114 B distillation column which vents to the waste incinerators or to the MCS vent scrubber on startup.

Process: 715 MQ Resins. Resins and polymers are held for further processing in a closed, stirred process kettle.

Process: 719 East and West Hydrolyzers. The East and West Hydrolyzers vent to the East and West High Acid Scrubbers.

Process: 722 East and south hydrolyzers. Emissions from the east and south hydrolyzers that vent to water scrubbers that discharge to the chem sewers.

Process: 723 Batch Mixing. The 225 gallon Day Mixer, the 500 Day Mixer, and the 500 gallon B-K Mixer vent through a common vacuum pump. The mixers are used to mix silicone.

Process: 724 Batch Mixing. The 3000 liter north and the 3000 liter south Drais mixers vent to venturi scrubbers during filler charges.

Process: 726 East System - This process consists of the East System Filter Press.

Process: 727 West System - manufactures products such as auto polishes, masonry water repellent, impregnant for roofing granules, and process aids for rubber production. It is a batch system that is a hydrolysis system. Associated...
equipment includes a filter press.

Process: 730 East resins. Under atmospheric conditions, emissions from a body kettle condenser vent. Emissions from the kettle can also go to a receiver vent.

Process: 732 1M reactor. Local ventilation system used to remove Dimethylformamide vapors during filter rebuild.

Process: 733 4000 PUFA. Methyl Styrene storage tank working losses.

Process: 737 Chlorosilane distillation. This process consists of distillation columns in the Chlorosilane distillation area which vent to the MCS vent scrubber.

Process: 7413M hydrolyzer. A 3000 gallon multifunctional batch system used to manufacture various product grades. The hydrolyzer is used for hydrolysis reactions, cold mixes, and equilibrium processes. Associated equipment includes weigh tanks, drum/tanker charging, filters.

Process: 746 Storage tanks - working losses. This process consists of working losses from storage tanks which vent to the MCS vent scrubber or the waste incinerators.

Process: 748 TCS/FS to incinerators or scrubbers. This process consists of sources in the Tri-Chlorosilane and fumed Silica operating areas which vent to the waste incinerators or the MCS vent scrubbers.

Process: 749 Waste treatment incinerators. This process consists of the Rotary Kiln Incinerator and the Fixed Box Incinerator no. 2 in the waste treatment plant.

Process: FIN This process represents the chemical manufacturing process sources that have been re-organized from the finishing emission unit (F-INISH) to C-27018 due to changes needed for compliance with MON requirements.

Emission unit C27035 - Emission unit C-27035 is comprised of several aboveground storage tanks which are used to store acids. The emission unit also contains three locations within the tank farm which allow for scrapping of acid to the chemical process sewer.

Emission unit C27035 is associated with the following emission points (EP):
27032, 27035, 27038

It is further defined by the following process(es):
Process: 056 is located at Building 27 - Equipment for Family of Material #056 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFF.

Emission unit EGNRTR - This unit consists of emergency generators that operate less than 500 hours per year each.

Emission unit EGNRTR is associated with the following emission points (EP):
51002, 51003, 80001, 86003, 96002

It is further defined by the following process(es):
Process: 421 This process includes the operation of emergency generators.

Emission unit FINISH - Finishing - intermediate and final production of silicone products and materials including resins, fluids, dispersions, emulsions, heat curing elastomers, room temperature vulcanizing (rtv) elastomers, sealants, and treated fumed silica. Also includes various maintenance shops and individual maintenance sources (such as degreasers).

Emission unit FINISH is associated with the following emission points (EP):
21101, 23100, 24136, 24141, 24946, 24947, 27102, 28009, 29102, 30001, 30002, 32006, 32007, 32008, 32009, 32016, 32017, 32026, 32027, 32028, 32040, 32042, 32044, 32046, 32049, 32050, 32052, 32003, 33004, 33017, 33019, 33020, 33024, 33025, 33026, 33091, 33092, 33093, 33904, 33905, 33906, 33907, 37001, 37002, 37004, 37009, 37010, 37024, 37049, 37050, 37054, 37059, 37701, 37924, 37948, 37960, 41001, 41002, 41003, 42001, 42002, 42003, 42005, 42012, 42013, 42019, 42020, 61602, 61603, 71010, 71013, 76006, 76007, 76716, 78021, 78022, 78023, 78024, 85002, 85003, 85004, 85005, 85006, 85007, 85008, 85013, 85020, 85021, 85022, 85023, 85024, 85025, 85026, 85029, 85032, 85036, 85037, 85038, 85039, 85040, 85041, 85042, 85045, 85046, 85054, 85058, 85059, 85066, 85067, 85093, 85094, 97023

It is further defined by the following process(es):
Process: 014 is located at Building 41 - This process represents FOM 014, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFF (Miscellaneous Organic Chemical Manufacturing)
Process: 015 is located at Building 41 - This process represents FOM 015, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 016 is located at Building 41 - This process represents FOM 016, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 017 is located at Building 41 - Equipment for Family of Material #017, which is a miscellaneous organix manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, SubPart FFFF.
Process: 018 is located at Building 41 - This process represents FOM 018, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 019 is located at Building 41 - This process represents FOM 019, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 020 is located at Building 41 - This process represents FOM 020, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 029 is located at Building 85 - This process represents FOM 029, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 053 is located at Building 76 - This process represents FOM 053, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 057 is located at Building 42 - This process represents FOM 057, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 058 is located at Building 42 - This process represents FOM 058, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 059 is located at Building 42 - This process represents FOM 059, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 060 is located at Building 30 - This process represents FOM 060, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 063 is located at Building 30 - This process represents FOM 063, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 065 is located at Building 30 - This process represents FOM 065, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 069 is located at Building 76 - This process represents FOM 069, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 076 is located at Building 30 - This process represents FOM 076, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 077 is located at Building 30 - This process represents FOM 077, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous
Organic Chemical Manufacturing
Process: 081 is located at Building 37 - This process represents FOM 081, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 092 is located at Building 71 - This process represents FOM 092, which is a miscellaneous organic chemical manufacturing unit (MCPU) that is regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 136 is located at Building 30 - Equipment for Family of Material #136 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Part 63 Subpart FFFF.
Process: 155 is located at Building 78 - Equipment for Family of Material #155 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 157 is located at Building 32 - Equipment for Family of Material #157 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 159 is located at Building 42 - Equipment for Family of Material #159 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 165 is located at Building 41 - Equipment for Family of Material #165 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 169 is located at Building 76 - Equipment for Family of Material #169 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 173 is located at Building 78 - Equipment for Family of Material #173 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 175 is located at Building 85 - Equipment for Family of Material #175 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 176 is located at Building 30 - Equipment for Family of Material #176 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 177 is located at Building 30 - Equipment for Family of Material #177 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 178 is located at Building 30 - Equipment for Family of Material #178 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 179 is located at Building 30 - Equipment for Family of Material #179 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 180 is located at Building 78 - Equipment for Family of Material #180 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 181 is located at Building 78 - Equipment for Family of Material #181 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 182 is located at Building 85 - Equipment for Family of Material #182 which is a miscellaneous organic manufacturing unit (MCPU) that is regulated under 40 CFR Oart 63 Subpart FFFF.
Process: 207 This process represents the management of Group 1 wastewater in individual drain systems. The Group 1 wastewater streams are generated by the miscellaneous organic chemical manufacturing units (MCPU) in C-27018 that are regulated under 40 CFR Part 63, Subpart FFFF (Miscellaneous Organic Chemical Manufacturing).
Process: 21801 - Catalyst vapors emitted by material in purge drums waste drums screening operations drum weigh 02 - caco3 &/or tio2 is fed continuously from gravity feeders 898-424-0067 to inlet hopper on 03 - "packaged" piped vacuum cleaning system (898-451-003) for housekeeping in processing areas of 04 - vent from the beringer oven.
Process: 219 Untreated filler is conveyed via a moving air stream to this silo displaced air from the silo is filtered and vented to atmosphere.
Process: 712 South resins. During the vacuum process, emissions from a body kettle condenser pass through a receiver to a vacuum eductor and out to the atmosphere.
Process: 713 East resins. During the vacuum process, emissions from a body kettle condenser pass through a receiver to a vacuum eductor and out to the atmosphere.
Process: 714 Doughmixer area - doughmixers #5,6,7,8, and 9 vent to a condenser and a receiver vent. The doughmixers are batch mixers used in the production of various products.
Process: 716 Doughmixer area - doughmixers #3,5,6,7,8, and 9 vent to a hood. The doughmixers are batch mixers used in the production of various products.
Process: 717Treater filler kettle - Treater filler kettle is used to treat raw filler with HMDZ. HMDZ vapors are discharged to receiver and ultimately to a packed tower scrubber. Tank wagon emissions also vented to scrubber.
Process: 7181500 Phenyl reactor (Diol and Tetramer). A batch system used to manufacture phenyl diol and Phenyl Tetramer.
Process: 720Treater Filler Kettles - The Methyl Tetramer (D4) recovery system consists of a vapor condensing tower, a D4 circulating tank, a knock out pot, and a light-ends weigh tank. D4 vapor and Nitrogen are released from treated filler kettles and transferred to the recovery system.
Process: 721Treater Filler Kettles - Treater filler kettles are used to treat raw fillers with Methyl Tetramer. Methyl Tetramer vapors are discharged to a condenser/receiver system.
Process: 7281M Fluorosilicone reactor. A 1000 gallon batch system used to manufacture Fluorosilicone Polysiloxane. The process consists of two steps: production of 88536 followed by hydrolysis. Major equipment includes a reactor, weigh tank, and two receivers.
Process: 7344000 PUFA - This process consists of a 1-Hexene process tank.
Process: 735East and West Systems - Standing losses from atmospheric storage tanks. The tanks are used to store Acetyl Chloride waste, Silane blend, and propyltriethoxysilane (PTAS).
Process: 736East and West Systems - Working losses from atmospheric storage tanks. The tanks are used to store Acetyl Chloride waste, Silane blend, and propyltriethoxysilane (PTAS).
Process: 738Working losses from the four pigment tanks are used to store liquid pigment dispersions. The vessels vent to the atmosphere when the vessels are charged from the drums the vessels vent to a common conservation vent header.
Process: 739Standing storage losses from four pigment tanks are used to store liquid pigment dispersions. The vessels vent to the atmosphere when the vessels are charged from the drums. The vessels vent to a common conservation vent header.
Process: 740WP2, WP3 Tanks - This process represents working losses from volatile organic liquid storage tanks used in the WP-2 and WP-3 operations. Tanks are under pressure or have a Nitrogen blanket.
Process: BMDMolding Compound Area - Solids handling operations, including dust collectors for grinding operations and exhaust hoods, blending and extruding, and bag slitting. Associated equipment includes mixers, extruders, grinders, and blenders.
Process: DEGMaintenance shops - Cold cleaning solvent degreasing units that use a petroleum distillate solvent.
Process: FFRReductor system. Insignificant emissions from the Phenyl Tetramer eductor system.
Process: TKCTransfer and Blending. Working losses from Tank 538. The tank is under a Nitrogen pad/dapad system.
Process: TKDTransfer and Blending. Working losses from Isopropanol storage tank.
Process: TKETransfer and Blending. Standing storage losses from Isopropanol storage tank.
Process: WPF is located at Building 30 - Fugitive emissions WP1, & WP4.

Emission unit HOFURN - This unit consists of additional hot oil furnaces not already included in another emission unit.
Emission unit HOFURN is associated with the following emission points (EP):
21012, 35027, 62016, 85063
It is further defined by the following process(es):
Process: 418This process includes the operation of hot oil furnaces.
Process: 426 is located at Building 21 - This process includes the operatoin of hot oil furnaces replace the existing 21HOF and 35HOF upon reconfiguration of the existing 12.5 mmBTU/hr natural gas burners with 15 mmBTU/hr natural gas burners. These furnaces are in building 21 and 35.

Emission unit U28002 - Emission Unit U28002 consists of Boilers 13 and 18 and a #2 Fuel Oil storage tank.
Emission unit U28002 is associated with the following emission points (EP):
28002, 28006, 28020
It is further defined by the following process(es):
Process: 409Boiler 13 - Number 6 fuel oil combustion.
Process: 411 is located at Building 28 - #2 fuel oil combustion for boiler #18

Emission unit T13004 - Vapors and particulates are vented to the atmosphere outside of building 13 at different emissions points. These include process, filter, and local extraction discharges.
Emission unit T13004 is associated with the following emission points (EP): 13004, 13006
It is further defined by the following process(es):
Process: 742Process development. Emissions from siloxanes passing from the compander to the LIM after-condenser at location 4A.
Process: 743Process development. Volatiles stripped from the LIM during compounding and cooling pass through the shared LIM after-condenser at location 4C.

Emission unit U28003 - Emission Unit U28003 consists of boilers 14, 15, 16, and 17.
Emission unit U28003 is associated with the following emission points (EP): 28003, 28004, 28005
It is further defined by the following process(es):
Process: 413 is located at Building 28 - Boiler 15 - Natural gas combustion.
Process: 414 is located at Building 28 - Boiler 14 - Number 6 fuel oil combustion.
Process: 415 is located at Building 28 - Boiler 14 - Natural gas combustion.
Process: 416 is located at Building 28 - Boiler 17 - Natural gas combustion.
Process: 417 is located at Building 28 - Boiler 16 - Natural gas combustion.

Emission unit W97004 - This Emission Unit is the wastewater treatment process system of the waste handling area. The wastewater treatment plant is a physical/chemical treatment system consisting of pH neutralization, oil and grease separation, clarification, and air stripping operations.
Emission unit W97004 is associated with the following emission points (EP): 95002, 97004, 97005, 97008, 97011, 97012, 97017, 97020, 97021, 97041, 97042, 97043, 97047, 97048, 97049
It is further defined by the following process(es):
Process: 744Underground storage tanks receiving acidic aqueous polar and non-polar solvent containing wastewater via sewer pipe.
Process: 745Waste Water Treatment Plant - 5,000 gallon neutralization tank which receives non-aqueous phase material and neutralizes it with KOH.

Emission unit C61007 - Silicon grinding area and fines passivation area. In the silicon grinding area, silicon metal is ground, screened, and transferred to silos. In the fines passivation area, mixers are used to mix fines to neutralize and harden the material.
Emission unit C61007 is associated with the following emission points (EP): 61001, 61002, 61003, 61005, 61006, 61007, 61008, 61009, 61010, 61805
It is further defined by the following process(es):
Process: 711 is located at Building 61 - Old Silicon grinding plant - unloads Silicon metal from rail cars to buffer silo. Silicon is fed from buffer silo to ball mill. Ball mill grinds Silicon and discharges ground powder to screener. Finished product is placed in silos; oversize material is recycled from screener to mill.
Process: GCC is located at Building 61 - Fines passivation. Fines are mixed with Lignin and water to neutralize and harden the material. Associated equipment is a bag dump station.

Emission unit C62008 - Chemops - MCSII, MCSIII and MCSIV operations. All equipment associated with the MCSII, MCSIII and MCSIV production operations, with the exception of the MCS vent scrubbers and MCS vent incinerator.
Emission unit C62008 is associated with the following emission points (EP): 55005, 55006, 57004, 62009, 62012, 65001
It is further defined by the following process(es):
Process: 419MCS Hot oil furnaces with limits on #2 fuel oil.
Process: MCW is located at Building 62 - MCS-Tanks - Working Loss - This process consists of Working Losses from tanks in the MCS production operation.

Emission unit C62014 - This unit consists of sources in the trichlorosilanes (TCS) and fumed silica production areas.
Emission unit C62014 is associated with the following emission points (EP):
68001, 68002, 68003, 68004
It is further defined by the following process(es):
Process: 407Fumed Silica scrubber. This process consists of a scrubber which removes Chlorine, Hydrogen Chloride, and Particulates.

**Title V/Major Source Status**
MOMENTIVE PERFORMANCE MATERIALS is subject to Title V requirements. This determination is based on the following information:
This facility is major for the following permitted emissions:

<table>

**Compliance Status**

Facility is in compliance with all requirements

**SIC Codes**

SIC or Standard Industrial Classification code is an industrial code developed by the
federal Office of Management and Budget for use, among other things, in the classification of establishments by the type of activity in which they are engaged. Each operating establishment is assigned an industry code on the basis of its primary activity, which is determined by its principal product or group of products produced or distributed, or services rendered. Larger facilities typically have more than one SIC code.

SCC Codes

SCC or Source Classification Code is a code developed and used by the USEPA to categorize processes which result in air emissions for the purpose of assessing emission factor information. Each SCC represents a unique process or function within a source category logically associated with a point of air pollution emissions. Any operation that causes air pollution can be represented by one or more SCC’s.

Facility Emissions Summary

In the following table, the CAS No. or Chemical Abstract Series code is an identifier assigned to every chemical compound. [NOTE: Certain CAS No.’s contain a ‘NY’ designation within them. These are not true CAS No.’s but rather an identification which has been developed by the department to identify groups of contaminants which ordinary CAS No.’s do not do. As an example, volatile organic compounds or VOC’s are identified collectively by the NY CAS No. 0NY998-00-0.] The PTE refers to the Potential to Emit. This is defined as the maximum capacity of a facility or air contaminant source to emit any air contaminant under its physical and operational design. Any physical or operational limitation on the capacity of the facility or air contamination source to emit any air contaminant, including air pollution control equipment and/or restrictions on the hours of operation, or on the type or amount or material combusted, stored, or processed, shall be treated as part of the design only if the limitation is contained in federally enforceable permit conditions. The PTE Range represents an emission range for a contaminant. Any PTE quantity that is displayed represents a facility-wide emission cap or limitation for that contaminant. If no PTE quantity is displayed, the PTE Range is provided to indicate the approximate magnitude of facility-wide emissions for the specified contaminant in terms of tons per year (tpy). The term ‘HAP’ refers to any of the hazardous air pollutants listed in section 112(b) of the Clean Air Act Amendments of 1990. Total emissions of all hazardous air pollutants are listed under the special NY CAS No. 0NY100-00-0. In addition, each individual hazardous air pollutant is also listed under its own specific CAS No. and is identified in the list below by the (HAP) designation.

NOTIFICATION OF GENERAL PERMITTEE OBLIGATIONS

Item A: Emergency Defense - 6NYCRR Part 201-1.5

An emergency constitutes an affirmative defense to an action brought for noncompliance with emissions limitations or permit conditions for all facilities in New York State.

(a) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

   (1) An emergency occurred and that the facility owner and/or operator can identify the cause(s) of the emergency;
   (2) The equipment at the permitted facility causing the emergency was at the time being properly operated;
   (3) During the period of the emergency the facility owner and/or operator took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit; and
   (4) The facility owner and/or operator notified the Department within two working days after the event occurred. This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

(b) In any enforcement proceeding, the facility owner and/or operator seeking to establish the occurrence of an emergency has the burden of proof.

(c) This provision is in addition to any emergency or upset provision contained in any applicable requirement.

Item B: Public Access to Recordkeeping for Title V Facilities - 6NYCRR Part 201-1.10(b)

The Department will make available to the public any permit...
application, compliance plan, permit, and monitoring and compliance certification report pursuant to Section 503(e) of the Act, except for information entitled to confidential treatment pursuant to 6NYCRR Part 616 - Public Access to records and Section 114(c) of the Act.

Item C: **Timely Application for the Renewal of Title V Permits - 6 NYCRR Part 201-6.3(a)(4)**

Owners and/or operators of facilities having an issued Title V permit shall submit a complete application at least 180 days, but not more than eighteen months, prior to the date of permit expiration for permit renewal purposes.

Item D: **Certification by a Responsible Official - 6 NYCRR Part 201-6.3(d)(12)**

Any application, form, report or compliance certification required to be submitted pursuant to the federally enforceable portions of this permit shall contain a certification of truth, accuracy and completeness by a responsible official. This certification shall state that based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

Item E: **Requirement to Comply With All Conditions - 6 NYCRR Part 201-6.5(a)(2)**

The permittee must comply with all conditions of the Title V facility permit. Any permit non-compliance constitutes a violation of the Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

Item F: **Permit Revocation, Modification, Reopening, Reissuance or Termination, and Associated Information Submission Requirements - 6 NYCRR Part 201-6.5(a)(3)**

This permit may be modified, revoked, reopened and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

Item G: **Cessation or Reduction of Permitted Activity Not a Defense - 6NYCRR Part 201-6.5(a)(5)**

It shall not be a defense for a permittee in an enforcement action to claim that a cessation or reduction in the permitted activity would have been necessary in order to maintain compliance with the conditions of this permit.

Item H: **Property Rights - 6 NYCRR Part 201-6.5(a)(6)**

This permit does not convey any property rights of any sort or any exclusive privilege.

Item I: **Severability - 6 NYCRR Part 201-6.5(a)(9)**
If any provisions, parts or conditions of this permit are found to be invalid or are the subject of a challenge, the remainder of this permit shall continue to be valid.

Item J: Permit Shield - 6 NYCRR Part 201-6.5(g)

All permittees granted a Title V facility permit shall be covered under the protection of a permit shield, except as provided under 6 NYCRR Subpart 201-6. Compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that such applicable requirements are included and are specifically identified in the permit, or the Department, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable to the major stationary source, and the permit includes the determination or a concise summary thereof. Nothing herein shall preclude the Department from revising or revoking the permit pursuant to 6 NYCRR Part 621 or from exercising its summary abatement authority. Nothing in this permit shall alter or affect the following:

i. The ability of the Department to seek to bring suit on behalf of the State of New York, or the Administrator to seek to bring suit on behalf of the United States, to immediately restrain any person causing or contributing to pollution presenting an imminent and substantial endangerment to public health, welfare or the environment to stop the emission of air pollutants causing or contributing to such pollution;

ii. The liability of a permittee of the Title V facility for any violation of applicable requirements prior to or at the time of permit issuance;

iii. The applicable requirements of Title IV of the Act;

iv. The ability of the Department or the Administrator to obtain information from the permittee concerning the ability to enter, inspect and monitor the facility.

Item K: Reopening for Cause - 6 NYCRR Part 201-6.5(i)

This Title V permit shall be reopened and revised under any of the following circumstances:

i. If additional applicable requirements under the Act become applicable where this permit's remaining term is three or more years, a reopening shall be completed not later than 18 months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which this permit is due to expire, unless the original permit or any of its terms and conditions has been extended by the Department pursuant to the provisions of Part 201-6.7 and Part 621.
ii. The Department or the Administrator determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the permit.

iii. The Department or the Administrator determines that the Title V permit must be revised or reopened to assure compliance with applicable requirements.

iv. If the permitted facility is an "affected source" subject to the requirements of Title IV of the Act, and additional requirements (including excess emissions requirements) become applicable. Upon approval by the Administrator, excess emissions offset plans shall be deemed to be incorporated into the permit.

Proceedings to reopen and issue Title V facility permits shall follow the same procedures as apply to initial permit issuance but shall affect only those parts of the permit for which cause to reopen exists.

Reopenings shall not be initiated before a notice of such intent is provided to the facility by the Department at least thirty days in advance of the date that the permit is to be reopened, except that the Department may provide a shorter time period in the case of an emergency.

Item L: Permit Exclusion - ECL 19-0305
The issuance of this permit by the Department and the receipt thereof by the Applicant does not and shall not be construed as barring, diminishing, adjudicating or in any way affecting any legal, administrative or equitable rights or claims, actions, suits, causes of action or demands whatsoever that the Department may have against the Applicant for violations based on facts and circumstances alleged to have occurred or existed prior to the effective date of this permit, including, but not limited to, any enforcement action authorized pursuant to the provisions of applicable federal law, the Environmental Conservation Law of the State of New York (ECL) and Chapter III of the Official Compilation of the Codes, Rules and Regulations of the State of New York (NYCRR). The issuance of this permit also shall not in any way affect pending or future enforcement actions under the Clean Air Act brought by the United States or any person.

Item M: Federally Enforceable Requirements - 40 CFR 70.6(b)
All terms and conditions in this permit required by the Act or any applicable requirement, including any provisions designed to limit a facility's potential to emit, are enforceable by the Administrator and citizens under the Act. The Department has, in this permit, specifically designated any terms and conditions that are not required under the Act or under any of its applicable requirements as being enforceable under only state regulations.

NOTIFICATION OF GENERAL PERMITTEE OBLIGATIONS
Item A: **General Provisions for State Enforceable Permit Terms and Condition - 6 NYCRR Part 201-5**

Any person who owns and/or operates stationary sources shall operate and maintain all emission units and any required emission control devices in compliance with all applicable Parts of this Chapter and existing laws, and shall operate the facility in accordance with all criteria, emission limits, terms, conditions, and standards in this permit. Failure of such person to properly operate and maintain the effectiveness of such emission units and emission control devices may be sufficient reason for the Department to revoke or deny a permit.

The owner or operator of the permitted facility must maintain all required records on-site for a period of five years and make them available to representatives of the Department upon request. Department representatives must be granted access to any facility regulated by this Subpart, during normal operating hours, for the purpose of determining compliance with this and any other state and federal air pollution control requirements, regulations or law.

Applicability Discussion:
Mandatory Requirements: The following facility-wide regulations are included in all Title V permits:

ECL 19-301.
This section of the Environmental Conservation Law establishes the powers and duties assigned to the Department with regard to administering the air pollution control program for New York State.
6NYCRR Part 200-.6
Acceptable ambient air quality - prohibits contravention of ambient air quality standards without mitigating measures

6NYCRR Part 200-.7
Anyone owning or operating an air contamination source which is equipped with an emission control device must operate the control consistent with ordinary and necessary practices, standards and procedures, as per manufacturer's specifications and keep it in a satisfactory state of maintenance and repair so that it operates effectively

6NYCRR Part 201-1.4
This regulation specifies the actions and recordkeeping and reporting requirements for any violation of an applicable state enforceable emission standard that results from a necessary scheduled equipment maintenance, start-up, shutdown, malfunction or upset in the event that these are unavoidable.

6NYCRR Part 201-1.7
Requires the recycle and salvage of collected air contaminants where practical

6NYCRR Part 201-1.8
Prohibits the reintroduction of collected air contaminants to the outside air

6NYCRR Part 201-3.2(a)
An owner and/or operator of an exempt emission source or unit may be required to certify that it operates within the specific criteria described in this Subpart. All required records must be maintained on-site for a period of 5 years and made available to department representatives upon request. In addition, department representatives must be granted access to any facility which contains exempt emission sources or units, during normal operating hours, for the purpose of determining compliance with this and any other state and federal air pollution control requirements, regulations, or law.

6NYCRR Part 201-3.3(a)
The owner and/or operator of a trivial emission source or unit may be required to certify that it operates within the specific criteria described in this Subpart. All required records must be maintained on-site for a period of 5 years and made available to department representatives upon request. In addition, department representatives must be granted access to any facility which contains trivial emission sources or units subject to this Subpart, during normal operating hours, for the purpose of determining compliance with this and any other state and federal air pollution control requirements, regulations, or law.

6NYCRR Part 201-6
This regulation applies to those terms and conditions which are subject to Title V permitting. It establishes the applicability criteria for Title V permits, the information to be included in all Title V permit applications as well as the permit content and terms of permit issuance. This rule also specifies the compliance, monitoring, recordkeeping, reporting, fee, and procedural requirements that need to be met to obtain a Title V permit, modify the permit and demonstrate conformity with applicable requirements as listed in the Title V permit. For permitting purposes,
this rule specifies the need to identify and describe all emission units, processes and products in the permit application as well as providing the Department the authority to include this and any other information that it deems necessary to determine the compliance status of the facility.

6NYCRR 201-6.5(a)(4)
This mandatory requirement applies to all Title V facilities. It requires the permittee to provide information that the Department may request in writing, within a reasonable time, in order to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. The request may include copies of records required to be kept by the permit.

6NYCRR 201-6.5(a)(7)
This is a mandatory condition that requires the owner or operator of a facility subject to Title V requirements to pay all applicable fees associated with the emissions from their facility.

6NYCRR 201-6.5(a)(8)
This is a mandatory condition for all facilities subject to Title V requirements. It allows the Department to inspect the facility to determine compliance with this permit, including copying records, sampling and monitoring, as necessary.

6NYCRR Part 201-6.5(c)
This requirement specifies, in general terms, what information must be contained in any required compliance monitoring records and reports. This includes the date, time and place of any sampling, measurements and analyses; who performed the analyses; analytical techniques and methods used as well as any required QA/QC procedures; results of the analyses; the operating conditions at the time of sampling or measurement and the identification of any permit deviations. All such reports must also be certified by the designated responsible official of the facility.

6NYCRR Part 201-6.5(c)(2)
This requirement specifies that all compliance monitoring and recordkeeping is to be conducted according to the terms and conditions of the permit and follow all QA requirements found in applicable regulations. It also requires monitoring records and supporting information to be retained for at least 5 years from the time of sampling, measurement, report or application. Support information is defined as including all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit.

6NYCRR Part 201-6.5(c)(3)(ii)
This regulation specifies any reporting requirements incorporated into the permit must include provisions regarding the notification and reporting of permit deviations and incidences of noncompliance stating the probable cause of such deviations, and any corrective actions or preventive measures taken.

6NYCRR 201-6.5(d)(5)
This condition applies to every Title V facility subject to a compliance schedule. It requires that reports, detailing the status of progress on achieving compliance with emission standards, be submitted semiannually.
6NYCRR Part 201-6.5(e)
Sets forth the general requirements for compliance certification content; specifies an annual submittal frequency; and identifies the EPA and appropriate regional office address where the reports are to be sent.

6NYCRR 201-6.5(f)(6)
This condition allows changes to be made at the facility, without modifying the permit, provided the changes do not cause an emission limit contained in this permit to be exceeded. The owner or operator of the facility must notify the Department of the change. It is applicable to all Title V permits which may be subject to an off permit change.

6NYCRR Part 202-1.1
This regulation allows the department the discretion to require an emission test for the purpose of determining compliance. Furthermore, the cost of the test, including the preparation of the report are to be borne by the owner/operator of the source.

6NYCRR Part 202-2.1
Requires that emission statements shall be submitted on or before April 15th each year for emissions of the previous calendar year.

6NYCRR Part 202-2.5
This rule specifies that each facility required to submit an emission statement must retain a copy of the statement and supporting documentation for at least 5 years and must make the information available to department representatives.

6NYCRR Part 211-.2
This regulation prohibits any emissions of air contaminants to the outdoor atmosphere which may be detrimental to human, plant or animal life or to property, or which unreasonably interferes with the comfortable enjoyment of life or property regardless of the existence of any specific air quality standard or emission limit.

6 NYCRR Part 211.3
This condition requires that the opacity (i.e., the degree to which emissions other than water reduce the transmission of light) of the emissions from any air contamination source be less than 20 percent (six minute average) except for one continuous six-minute period per hour of not more than 57 percent.

6 NYCRR Part 215
Prohibits open fires at industrial and commercial sites.

40 CFR Part 68.
This Part lists the regulated substances and there applicability thresholds and sets the requirements for stationary sources concerning the prevention of accidental releases of these substances.

40 CFR Part 82, Subpart F
Subpart F requires the reduction of emissions of class I and class II refrigerants to the lowest achievable level during the service, maintenance, repair, and disposal of appliances in accordance with section 608 of the Clean Air Act Amendments of 1990. This subpart applies to any person servicing, maintaining, or repairing appliances except for motor vehicle air conditioners. It also applies to persons disposing of
appliances, including motor vehicle air conditioners, refrigerant reclaimers, appliance owners, and manufacturers of appliances and recycling and recovery equipment. Those individuals, operations, or activities affected by this rule, may be required to comply with specified disposal, recycling, or recovery practices, leak repair practices, recordkeeping and/or technician certification requirements.

Facility Specific Requirements
In addition to Title V, MOMENTIVE PERFORMANCE MATERIALS has been determined to be subject to the following regulations:

40CFR 52-A.21
This citation applies to facilities that are subject to Prevention of Significant Deterioration provisions; i.e. facilities that are located in an attainment area and that emit pollutants which are listed in 40 CFR 52.21(b)(23)(i).

40CFR 60-A.11
This regulation specifies the type of opacity monitoring requirements in relation to compliance with the standards and maintenance requirements.

40CFR 60-A.11 (d)
This regulation specifies the type of opacity monitoring requirements in relation to compliance with the standards and maintenance requirements.

40CFR 60-A.12
This regulation prohibits an owner or operator from concealing emissions in violation of applicable standards by any means.

40CFR 60-A.13 (a)
This regulation specifies that all New Source Performance Standard (NSPS) affected sources that are required to have continuous monitoring systems (CMS) are subject to the requirements of Appendix B of 40 CFR Part 60 and if the CMS is used to demonstrate compliance with emission limits on a continuous basis, then it is also subject to Appendix F of 40 CFR Part 60.

40CFR 60-A.13 (d)
This regulation contains the requirements for daily drift testing for continuous monitoring systems required by 40 CFR Part 60.

40CFR 60-A.13 (e)
This regulation specifies minimum frequency of operation requirements for continuous monitoring systems required by 40 CFR Part 60.

40CFR 60-A.13 (h)
This regulation specifies the data averaging requirements for continuous monitoring systems subject to 40 CFR Part 60.

40CFR 60-A.4
This condition lists the USEPA Region 2 address for the submittal of all communications to the "Administrator". In
addition, all such communications must be copied to NYSDEC Bureau of Quality Assurance (BQA).

40CFR 60-A.7 (a)
This regulation requires any owner or operator subject to a New Source Performance Standard (NSPS) to furnish the Administrator with notification of the dates of: construction or reconstruction, initial startup, any physical or operational changes, commencement of performance testing for continuous monitors and anticipated date for opacity observations as required.

40CFR 60-A.7 (b)
This regulation requires the owner or operator to maintain records of the occurrence and duration of any startup, shutdown, or malfunction of the source or control equipment or continuous monitoring system.

40CFR 60-A.7 (c)
This requirement details the information to be submitted in excess emissions and monitoring systems performance reports which must be submitted at least semi-annually for sources with compliance monitoring systems.

40CFR 60-A.7 (d)
This condition specifies the required information and format for a summary report form and details when either a summary form and/or excess emissions reports are required.

40CFR 60-A.7 (f)
This condition specifies requirements for maintenance of files of all measurements, including continuous monitoring system (CMS), monitoring device, and performance testing measurements; all CMS performance evaluations; all CMS or monitoring device calibration checks; adjustments and maintenance performed on these systems or devices for at least two years.

40CFR 60-Db.43b (f)
This regulation specifies maximum allowable opacity for affected sources. The opacity of the emission may not exceed 20%, except for one six minute period when the maximum opacity may not exceed 27%.

40CFR 60-Db.43b (g)
This regulation specifies that the particulate matter and opacity standards apply at all times, except during periods of startup, shutdown or malfunction.

40CFR 60-Db.44b (a) (1)
These standards apply to all boilers firing natural gas and/or distillate oil except as provided in 40 CFR 60.44b(a)(4) Duct Burners Used in a Combined Cycle System.

40CFR 60-Db.44b (h)
This regulation specifies that the NSPS nitrogen oxide standards apply at all time including periods of startup, shutdown, or malfunction.

40CFR 60-Db.45b (j)
This regulation specifies that owner or operators that combust very low sulfur oil are not subject to compliance and performance testing requirements for Sulfur Dioxide if they obtain fuel receipts as described in 40 CFR 60.49b(r)

40CFR 60-Db.48b (c)
This regulation requires that the continuous monitoring system (CMS) and data recorder for nitrogen oxides
be operated during all periods of operation of the affected facility except for CMS breakdowns and repairs. Data must be recorded during calibration checks, and zero and span adjustments.

40 CFR 60-Db.48b (f)
This regulation requires that standby methods of obtaining minimum emissions data for oxides of nitrogen be specified by the source owner or operator.

40 CFR 60-Db.49b (f)
This subdivision specifies that monitored opacity records must be kept at the facility.

40 CFR 60-Db.49b (g)
This subdivision requires reporting and recordkeeping for affected steam generating units - specific oxides of nitrogen requirements.

40 CFR 60-Db.49b (r)
This regulation specifies that owner or operators that combust very low sulfur oil are required to obtain fuel receipts. The oil need not meet the fuel nitrogen content specification in the definition of distillate oil. Reports shall be submitted to the Administrator certifying that only very low sulfur oil meeting this definition was combusted.

40 CFR 60-Kb.112b (a) (3)
This regulation requires owner or operators of storage vessels with the dimensions listed below, to install a closed vent system and control device to collect all volatile organic compounds that are discharged from the vessel. This requirement applies to storage vessels with the following dimensions: design capacity > 151 m³ containing a VOL that, as stored, has a maximum true vapor pressure > 5.2 kPa but < 76.6 kPa or with a design capacity > 75 m³ but < 151 m³ containing a VOL that, as stored, has a maximum true vapor pressure > 27.6 kPa but less than 76.7 kPa. The emissions from the storage vessel must be monitored and be less than 500 parts per million.

40 CFR 60-Kb.113b (c)
This regulation allows the owner or operator of the storage vessel equipped with a closed vent system and control device to be exempt from the requirements of 40 CFR 60.8 (General Provisions). The source owner or operator must provide documentation that the control device will achieve the required control efficiency during maximum loading conditions.

40 CFR 60-Kb.115b (c)
This regulation requires the owner or operator to keep records of the operating plan and record the measured values of the parameters monitored for the closed vent system.

40 CFR 60-Kb.116b (b)
Owners or operators of affected storage tanks with capacities greater than or equal to 10,000 gallons must keep records of the tanks dimensions and an analysis of its capacity for the life of the tank. If the tank's capacity is less than 20,000 gallons, then it is subject to no other provisions of this subpart.

40 CFR 60-NNN.662 (a)
Conditions under 40 CFR 60.662(a) require total organic compound emissions (not counting methane or ethane) from distillation operations at synthetic organic chemical manufacturing facilities to be reduced by 98% or to a concentration of 20 parts per million whichever is less stringent. This is part of the Federal New Source Performance Standards and applies only to facilities constructed, reconstructed or modified since December 30, 1983.
40CFR 60-NNN.663 (a)
Conditions under 40CFR 60-NNN.663(a) dictate the parameter(s) to be monitored for distillation operations using incinerators to control their total organic compound emissions. This provides an assurance of continuous compliance with the emission standard.

40CFR 60-NNN.665
Conditions under 40CFR 60-NNN.665 describe the reporting and recordkeeping requirements for facilities subject to the Distillation Operations New Source Performance Standards, as well as those that are exempt due to having a total resource effectiveness index value greater than 8.

40CFR 60-RRR.702 (a)
Conditions under 40CFR 60-RRR.702(a) require total organic compound emissions (not counting methane or ethane) from reactor processes at synthetic organic chemical manufacturing facilities to be reduced by 98% or to a concentration of 20 parts per million whichever is less stringent. This is part of the Federal New Source Performance Standards and applies only to facilities constructed, reconstructed, or modified since June 29, 1990. Applicability under this section also triggers monitoring under §703, testing under §704, and reporting and recordkeeping under §705.

40CFR 61-A
This regulation, 40 CFR 61 Subpart A, lists the general provisions that a facility subject to a National Emissions Standard for Hazardous Air Pollutant is subject to.

40CFR 61-M.145
This regulation, 40 CFR 61 Subpart M, lists the general provisions that a facility subject to a National Emissions Standard for Hazardous Air Pollutant for Asbestos demolition and renovation is subject to.

40CFR 63-A.6 (e) (1)
This condition requires the facility to address the emissions of hazardous air pollutants (HAPs) during periods when the process(es) are starting up, shutting down, or malfunctioning. This condition requires the facility to come up with a startup, shutdown, malfunction plan (SSMP) which addresses how the plant personnel will react to each of the situations when the process(es) are not functioning normally and what steps will be taken to reduce the release of HAPs to the atmosphere.

If the facility takes actions which aren't in the SSMP, then the facility needs to notify NYSDEC, and update the SSMP accordingly.

The facility must have the SSMP available upon request for the NYSDEC to review.

40CFR 63-A.6 (e) (1) (i)
Paragraph 63.6(e) requires that affected sources including air pollution control equipment must be operated and maintained to minimize emissions "at least to the level required by all relevant standards." It further requires that this be done at all time including during periods of startup, shutdown, and malfunction (SSM). Also operation during those times must be according to a SSM plan. §63.6(f) indicates however that nonopacity emission standards do not apply during SSM periods. Thus at those times the owner or operator must minimize emissions.

40CFR 63-A.6 (e) (3)
Paragraph 63.6(e)(3) requires a startup, shutdown, and malfunction (SSM) plan for MACT-affected sources and that the plan be followed.

40CFR 63-A.6 (f) (1)
This section states that nonopacity standards apply at all times except during periods of startup, shutdown, and
malfuncti

40CFR 63-A.6 (f) (2) (i)
§63.6(f)(2) states that compliance with nonopacity standards shall be based on the results of performance tests using procedures in §63.7 and on conformance with the operation and maintenance requirements of §63.6(e).

40CFR 63-A.6 (f) (2) (ii)
§63.6(f)(2) states that compliance with nonopacity standards shall be based on the results of performance tests using procedures in §63.7 and on conformance with the operation and maintenance requirements of §63.6(e).

40CFR 63-DD.680 (d)
This regulation, 40 CFR 63 Subpart DD, lists the applicability and designation of affected sources subject to a National Emissions Standard for Hazardous Air Pollutant from Off-Site Waste and Recovery Operations.

40CFR 63-EEE.1203 (a) (1)
This regulation, 40 CFR 63 Subpart EEE, provides the standards for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1203 (a) (2)
(a) Emission limits for existing sources You must not discharge or cause combustion gasses to be emitted into the atmosphere that contain:
(2) Mercury in excess of 130 μg/dscm corrected to 7 percent oxygen;

40CFR 63-EEE.1203 (a) (3)
(a) Emission limits for existing sources You must not discharge or cause combustion gasses to be emitted into the atmosphere that contain:
(3) Lead and cadmium in excess of 240 μg/dscm, combined emissions, corrected to 7 percent oxygen;

40CFR 63-EEE.1203 (a) (4)
(a) Emission limits for existing sources You must not discharge or cause combustion gasses to be emitted into the atmosphere that contain:
(4) Arsenic, beryllium, and chromium in excess of 97 μg/dscm, combined emissions, corrected to 7 percent oxygen;

40CFR 63-EEE.1203 (a) (5) (i)
(a) Emission limits for existing sources You must not discharge or cause combustion gasses to be emitted into the atmosphere that contain:
(5) For carbon monoxide and hydrocarbons, either:

(i) Carbon monoxide in excess of 100 parts per million by volume, over an hourly rolling average (monitored continuously with a continuous emissions monitoring system), dry basis and corrected to 7 percent oxygen. If you elect to comply with this carbon monoxide standard rather than the hydrocarbon standard under paragraph (a)(5)(ii) of this section, you must also document that, during the destruction and removal efficiency (DRE) test runs or their equivalent as provided by § 63.1206(b)(7), hydrocarbons do not exceed 10 parts per million by volume during those runs, over an hourly rolling average (monitored continuously with a continuous emissions monitoring system), dry basis, corrected to 7 percent oxygen, and reported as propane; or

(ii) Hydrocarbons in excess of 10 parts per million by volume, over an hourly rolling average (monitored
continuously with a continuous emissions monitoring system), dry basis, corrected to 7 percent oxygen, and reported as propane;

\[40CFR\ 63\-EEE.1203\ (a)\ (6)\]

(a) Emission limits for existing sources You must not discharge or cause combustion gasses to be emitted into the atmosphere that contain:

(6) Hydrochloric acid and chlorine gas in excess of 77 parts per million by volume, combined emissions, expressed as hydrochloric acid equivalents, dry basis and corrected to 7 percent oxygen; and

\[40CFR\ 63\-EEE.1203\ (a)\ (7)\]

(a) Emission limits for existing sources You must not discharge or cause combustion gasses to be emitted into the atmosphere that contain:

(7) Particulate matter in excess of 34 mg/dscm corrected to 7 percent oxygen.

\[40CFR\ 63\-EEE.1203\ (c)\ (1)\]

This regulation, 40 CFR 63 Subpart EEE, provides the standards for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

\[40CFR\ 63\-EEE.1203\ (c)\ (3)\ (ii)\]

This regulation, 40 CFR 63 Subpart EEE, provides the standards for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

\[40CFR\ 63\-EEE.1206\ (a)\ (1)\ (ii)\ ('A')\]

This regulation, 40 CFR 63 Subpart EEE, details when and how a facility must comply with the applicable requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

\[40CFR\ 63\-EEE.1206\ (b)\]

Summary of Compliance with standards (see regulation for detailed descriptions)

(1) Applicability.
(2) Methods for determining compliance.
(3) Finding of compliance.
(4) Extension of compliance with emission standards.
(5) Changes in design, operation, or maintenance.
(6) Compliance with the carbon monoxide and hydrocarbon emission standards.
(7) Compliance with the DRE standard.
(8) Applicability of particulate matter and opacity standards during particulate matter CEMS correlation tests.
(9) Alternative standards for existing or new hazardous waste burning lightweight aggregate kilns using MACT.
(10) Alternative standards for existing or new hazardous waste burning cement kilns using MACT.
(11) Calculation of hazardous waste residence time.
(12) Documenting compliance with the standards based on performance testing.
(13) Cement kilns and lightweight aggregate kilns that feed hazardous waste at a location other than the end where products are normally discharged and where fuels are normally fired.
(14) Alternative particulate matter standard for incinerators with de minimis metals.
Summary of Operating requirements --

(1) General.
(2) Startup, shutdown, and malfunction plan.
(3) Automatic waste feed cutoff
(4) ESV openings
(5) Combustion System Leaks
(6) Operator training and certification.
(7) Operation and maintenance plan

40CFR 63-EEE.1209 (a) (1) (i)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (a) (1) (iii)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (a) (2)
This condition requires the facility to ensure that the continuous monitor that is installed to be properly maintained and operated so that the emission results it reads is accurate.

40CFR 63-EEE.1209 (a) (3) (i)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (a) (6) (i)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (a) (6) (ii)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (a) (6) (iii)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (a) (7)
This condition explains how the facility is expected to ensure that the emission standard for hydrocarbons is not exceeded. Basically, the facility is expected to set limits based on the readings of a continuous monitor and limits relating to a specific destruction and removal efficiency (DRE) during the performance test and continuously comply with them.
40CFR 63-EEE.1209 (c) (1)
This condition requires the facility to analyze each feedstream to determine whether the properties of the feedstream are within the parameter limits.

40CFR 63-EEE.1209 (c) (2)
This condition requires the facility to develop a feedstream analysis plan in order to determine whether the properties of the feedstream meet the operating limits in this subpart. This analysis should include information on what the facility will measure, and how the parameter will be measured. The plan will be recorded in the facility's operating record.

40CFR 63-EEE.1209 (c) (4)
This condition describes how the facility is expected to comply with the feedstream parameter limits. The condition requires a continuous monitoring system to measure the proper parameters of the feedstream so that the facility can calculate and record the parameter to ensure the parameter's limit is not exceeded.

40CFR 63-EEE.1209 (j) (1)
This condition requires that in order for the facility to determine if it is complying with the destruction and removal efficiency standard, then a minimum combustion temperature must be established during the performance test. This temperature would be representative of the minimum temperature that will destroy the hazardous air pollutant emissions sufficiently to satisfy the limit in this subpart.

40CFR 63-EEE.1209 (j) (2)
This condition requires that in order for the facility to determine if it is complying with the destruction and removal efficiency standard, then a maximum flue gas flowrate or production rate must be established during the performance test. This flowrate or production rate would be representative of the maximum value that will ensure that the hazardous air pollutant emissions are sufficiently reduced to satisfy the emission limits in this subpart.

40CFR 63-EEE.1209 (j) (3)
This condition requires that in order for the facility to determine if it is complying with the destruction and removal efficiency standard, then a maximum hazardous waste feedrate must be established during the performance test. This feedrate would be representative of the maximum value that will ensure that the hazardous air pollutant emissions are sufficiently reduced to satisfy the emission limits in this subpart.

40CFR 63-EEE.1209 (j) (4)
This condition requires that in order for the facility to determine if it is complying with the destruction and removal efficiency standard, then parameters must be established during the performance test which indicate proper operation of the waste firing system.

40CFR 63-EEE.1209 (l) (1)
During the comprehensive performance test, the maximum level of mercury is established which will ensure that the hazardous waste combustor does not exceed the emission limit for mercury. The facility will then need to monitor the mercury content of the hazardous waste to prove that the limit has not been exceeded.

40CFR 63-EEE.1209 (m) (1) (i) ('B') ('1')
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (m) (1) (i) ('B') ('2')
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air
Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (m) (1) (i) (B) (4)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (m) (3)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (n) (2)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1209 (n) (4)
In order for the hazardous waste combustor to meet the emission limits for metals, then during the comprehensive performance test the facility must establish operating limits that prove that the facility will be in compliance with the metal limits as long as the operating parameter is being met. This condition specifically requires the facility to set a limit for the amount of chlorine and chloride in the hazardous waste feedstream.

40CFR 63-EEE.1209 (o) (3) (ii)
If the facility equips the hazardous waste combustor with a low energy wet scrubber, then this condition requires the facility to monitor certain parameters to make sure the scrubber is working properly to control hydrochloric acid and chloride gas emissions. This condition specifically requires the facility to monitor the pressure drop across the scrubber.

40CFR 63-EEE.1209 (o) (3) (iii)
If the facility equips the hazardous waste combustor with a low energy wet scrubber, then this condition requires the facility to monitor certain parameters to make sure the scrubber is working properly to control hydrochloric acid and chloride gas emissions. This condition specifically requires the facility to monitor the minimum liquid feed pressure in the scrubber.

40CFR 63-EEE.1209 (o) (3) (iv)
If the facility equips the hazardous waste combustor with a wet scrubber, then this condition requires the facility to monitor certain parameters to make sure the scrubber is working properly to control hydrochloric acid and chloride gas emissions. This condition specifically requires the facility to monitor the pH in the scrubber.

40CFR 63-EEE.1209 (o) (3) (v)
If the facility equips the hazardous waste combustor with a low energy wet scrubber, then this condition requires the facility to monitor certain parameters to make sure the scrubber is working properly to control hydrochloric acid and chloride gas emissions. This condition specifically requires the facility to monitor the minimum liquid-gas ratio or minimum scrubber water flowrate and maximum flue gas flowrate in the scrubber.

40CFR 63-EEE.1209 (p)
This condition reduces the emissions of hazardous air pollutants by requiring the facility to keep the pressure inside of the combustion chamber of the hazardous waste combustor under that of the atmosphere outside of the combustor. This reduces the chance of leaks from the combustor escaping into the atmosphere.
40CFR 63-EEE.1210 (a)
This regulation, 40 CFR 63 Subpart EEE, details the notification requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1210 (b)
This regulation, 40 CFR 63 Subpart EEE, details the notification requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1210 (d)
This regulation, 40 CFR 63 Subpart EEE, details the notification requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1211 (a)
This regulation, 40 CFR 63 Subpart EEE, details the record keeping and reporting requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1211 (b)
This condition lists the information that the facility must keep on record at the plant. This information will assist the NYSDEC when the facility is inspected in order to determine whether the plant has been in compliance with the emission standards listed in this subpart EEE. Information that must be recorded includes instrument readings which indicate whether any control devices were working, whether there were any startups, shutdowns, or malfunctions at the facility, and whether the plant has changed its operation in a way that could affect the emissions from the incinerator.

40CFR 63-EEE.1211 (c)
This regulation, 40 CFR 63 Subpart EEE, details the record keeping and reporting requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1219 (a)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1219 (c) (1)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1219 (c) (3) (ii)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air Pollutant from Hazardous Waste Combustors.

40CFR 63-EEE.1219 (e)
This regulation, 40 CFR 63 Subpart EEE, details the monitoring requirements for a facility subject to the requirements for Hazardous Waste Incinerators subject to a National Emissions Standard for Hazardous Air...
Pollutant from Hazardous Waste Combustors.

40CFR 63-F.102 (a) (2)
This condition specifies that the requirements of the HON rule do not apply during periods of startup, shutdown, or malfunction. The rule also does not apply when the process unit's lines are drained and depressurized.

40CFR 63-F.104
If there are heat exchangers in a process unit that is subject to the Hazardous Organic NESHAP rule, the facility must monitor the heat exchangers for leaks in order to prevent organic hazardous air pollutants from entering the coolant water supply. The facility can choose to either monitor the cooling water directly or measure some other parameter that would indicate a leak in the heat exchange equipment.

40CFR 63-F.105
This condition requires that the facility prepare a plan on how to manage the wastewater containing organic hazardous air pollutants that is generated during process unit maintenance or shutdown. This plan should include every task that creates this type of wastewater and how best to handle the water to minimize the amount of organic hazardous air pollutants that get released to the atmosphere.

40CFR 63-FFFF.2450 (a)
This regulation, 40 CFR 63 Subpart FFFF, details the general requirements to comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2450 (b)
This regulation, 40 CFR 63 Subpart FFFF, details the general requirements to comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2450 (f)
This regulation, 40 CFR 63 Subpart FFFF, details the general requirements to comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2450 (i)
This regulation, 40 CFR 63 Subpart FFFF, details the general requirements to comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2450 (j)
This regulation, 40 CFR 63 Subpart FFFF, details the general requirements to comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2450 (k)
This regulation, 40 CFR 63 Subpart FFFF, details the general requirements to comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2450 (l)
This regulation, 40 CFR 63 Subpart FFFF, details the general requirements to comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.
40CFR 63-FFFF.2450 (p)
This regulation, 40 CFR 63 Subpart FFFF, details the general requirements to comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2455 (a)
This regulation, 40 CFR 63 Subpart FFFF, details when a facility must comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2455 (b)
This regulation, 40 CFR 63 Subpart FFFF, details when a facility must comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2460 (a)
This regulation, 40 CFR 63 Subpart FFFF, details when a facility must comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2460 (b)
This regulation, 40 CFR 63 Subpart FFFF, details when a facility must comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2460 (c)
This regulation, 40 CFR 63 Subpart FFFF, details when a facility must comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2460 (c) (7)
This regulation, 40 CFR 63 Subpart FFFF, details when a facility must comply with the requirements for National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2465 (a)
This regulation, 40 CFR 63 Subpart FFFF, details the requirements to meet for process vents that emit hydrogen halide and halogen HAP or PM HAP for facilities subject to the National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2480
This regulation, 40 CFR 63 Subpart FFFF, details the requirements to meet for equipment leaks for facilities subject to the National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2485 (c)
This regulation, 40 CFR 63 Subpart FFFF, details the requirements to meet for wastewater streams and liquid streams in open systems within an MPCU for facilities subject to the National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2520 (c)
This regulation, 40 CFR 63 Subpart FFFF, details what reports must be submitted and when for facilities subject to the National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2525
This regulation, 40 CFR 63 Subpart FFFF, details what reports must be submitted and when for facilities subject to the National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40CFR 63-FFFF.2535 (g)
This regulation, 40 CFR 63 Subpart FFFF, details compliance options when part of a plant is subject to both this
subpart and another subpart for facilities subject to the National Emission Standards for Hazardous Air Pollutants: Miscellaneous Organic Chemical Manufacturing.

40 CFR 63-G.113
This regulation, 40 CFR 63 Subpart G, provides the reference control technology for process vents subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40 CFR 63-G.113 (a)(2)
This allows the owner/operator to either reduce the total OHAP concentration in the vent stream by 98% by weight or to reduce the total OHAP or TOC concentration to 20 ppmv, whichever is less stringent.

40 CFR 63-G.113 (b)
This condition controls the emissions of hazardous air pollutants by requiring that if the facility is controlling emissions of the gas stream by using a process heater or a boiler, then the stream must be introduced into the flame zone. This helps to ensure complete combustion within the boiler/process heater and therefore minimizes the amount of hazardous air pollutants that could escape to the atmosphere.

40 CFR 63-G.114
This regulation, 40 CFR 63 Subpart G, provides the monitoring requirements for process vents subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40 CFR 63-G.114 (a)(1)(i)
This regulation, 40 CFR 63 Subpart G, provides the monitoring requirements for process vents subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40 CFR 63-G.114 (a)(3)
This regulation, 40 CFR 63 Subpart G, provides the monitoring requirements for process vents subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40 CFR 63-G.114 (a)(4)(i)
This regulation, 40 CFR 63 Subpart G, provides the monitoring requirements for process vents subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40 CFR 63-G.114 (a)(4)(ii)
This regulation, 40 CFR 63 Subpart G, provides the monitoring requirements for process vents subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40 CFR 63-G.119 (b)
In order to reduce the emissions of organic hazardous air pollutants from storage vessels, a facility may elect to install a fixed roof and an internal floating roof on the storage vessel. This condition requires the facility to install certain equipment (seals, gaskets, etc.) designed to reduce any direct contact between the liquid in the storage tank and the atmosphere. Periodic inspections to insure that there are no leaks from the internal floating roof into the atmosphere are also required in this condition.

40 CFR 63-G.119 (e)
In order to reduce the emissions of organic hazardous air pollutants from storage vessels, a facility may elect to install a system that routes all of the emissions from the storage vessel to a control device. This condition requires that the control device reduces the organic hazardous air pollutants in this captured stream by 90-95% depending on when the control device was installed.

40CFR 63-G.123 (a)
This condition requires the facility to keep a record of the dimensions and the capacity of any storage vessel that is subject to the HON rule.

40CFR 63-G.132 (a) (3)
According to this condition, the facility must keep certain records for wastewater streams that are not considered a high risk of hazardous air pollutant emissions. These records will ensure that the stream(s) remain a minor source of emissions and are subject to verification by the New York State DEC.

40CFR 63-G.132 (f)
This regulation, 40 CFR 63 Subpart G, provides the general process waste water requirements for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.133 (a) (1)
This regulation, 40 CFR 63 Subpart G, provides the requirements for waste water tanks subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.133 (a) (2)
This regulation, 40 CFR 63 Subpart G, provides the requirements for waste water tanks subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.133 (f)
This regulation, 40 CFR 63 Subpart G, provides the requirements for waste water tanks subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.135 (b)
This regulation, 40 CFR 63 Subpart G, provides the requirements for containers subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.135 (c)
This regulation, 40 CFR 63 Subpart G, provides the requirements for containers subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.135 (e)
This regulation, 40 CFR 63 Subpart G, provides the requirements for containers subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.135 (f)
This regulation, 40 CFR 63 Subpart G, provides the requirements for containers subject to a National Emissions

**40CFR 63-G.136**
This regulation, 40 CFR 63 Subpart G, provides the requirements for individual drain systems subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

**40CFR 63-G.138 (a)**
This regulation, 40 CFR 63 Subpart G, provides the requirements for treatment processes managing Group 1 wastewater streams and/or residuals removed from streams and/or residuals removed from Group 1 wastewater streams subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

**40CFR 63-G.138 (k)**
This regulation, 40 CFR 63 Subpart G, provides the requirements for treatment processes managing Group 1 wastewater streams and/or residuals removed from streams and/or residuals removed from Group 1 wastewater streams subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

**40CFR 63-G.139 (f)**

**40CFR 63-G.140**

**40CFR 63-G.143 (e)**
This regulation, 40 CFR 63 Subpart G, contains provisions for the inspection and monitoring of operations for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

**40CFR 63-G.143 (g)**
This regulation, 40 CFR 63 Subpart G, contains provisions for the inspection and monitoring of operations for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

**40CFR 63-G.145 (h)**
This regulations details the test methods and procedures to determine compliance for Process wastewater sources.

40CFR 63-G.146 (b)

40CFR 63-G.147

40CFR 63-G.148
This regulation, 40 CFR 63 Subpart G, contains the leak inspection requirements for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.148 (b) (1)
This condition requires any vapor collection system and closed-vent system that consists of hard-piping to be periodically checked for leaks of organic hazardous air pollutants. There shall be an initial inspection of the entire system using an analyzer. Subsequently, the systems shall be looked at annually and checked to see if there is any physical evidence (sight, smell, etc.) of a leak.

40CFR 63-G.148 (d)
This condition requires the facility to repair any leaks found on a closed-vent or vapor collection system that is subject to the HON rule. This condition helps minimize the fugitive losses of organic hazardous air pollutants by ensuring that the facility repairs all leaks within 15 days. Adequate records also are required in order to keep track of the leaks in these systems.

40CFR 63-G.148 (e)
This condition allows a facility that found leaks in a vapor collection system or closed-vent system to delay the repair of these leaks. The leaks may be delayed if doing so would create more emissions of organic hazardous air pollutants than otherwise would result from leaving the leak alone.

40CFR 63-G.148 (i)
This regulation, 40 CFR 63 Subpart G, contains the leak inspection requirements for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.148 (j)
This regulation, 40 CFR 63 Subpart G, contains the leak inspection requirements for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants from the Synthetic Organic Chemical Manufacturing Industry for Process Vents, Storage Vessels, Transfer Operations, and Wastewater.

40CFR 63-G.152 (d) (1)
This condition requires the facility to submit reports of startups, shutdowns, and malfunctions that occur during each 6-month period.

40CFR 63-GGGGG.7881 (c)
This regulation, 40 CFR 63 Subpart GGGGG, details who is subject to the National Emissions Standard for Hazardous Air Pollutants from Site Remediation.
40CFR 63-H.160
This section of the Equipment Leaks portion of the Hazardous Organic NESHAP rule describes the types of equipment subject to the rule and types that are exempt. It also describes how overlap with other federal regulations are handled.

40CFR 63-H.162 (c)
This regulation, 40 CFR 63 Subpart H, contains the General Standards for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.162 (f)
This condition requires the facility to identify which pieces of equipment is leaking hazardous air pollutants. The facility is generally allowed to remove the indicator sign once the equipment has been remonitored and is no longer leaking.

40CFR 63-H.163 (a)
This regulation, 40 CFR 63 Subpart H, contains the Standards for pumps in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.163 (b) (1)
This regulation, 40 CFR 63 Subpart H, contains the Standards for pumps in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.163 (b) (2)
This paragraph of the Equipment Leaks rule defines leaks for pumps in light liquid service. Leaks are not violations but trigger attempts at repair.

40CFR 63-H.163 (b) (3)
This regulation, 40 CFR 63 Subpart H, contains the Standards for pumps in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.163 (d) (1)
This paragraph of the equipment leaks rule describes how to calculate the percent of leaking pumps in light liquid service. The result is used to determine whether or not a quality improvement program for pumps is required.

40CFR 63-H.164 (i)
This regulation, 40 CFR 63 Subpart H, contains the Standards for compressors subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.165 (d) (2)
This regulation, 40 CFR 63 Subpart H, contains the standards for pressure relief devices in gas/vapor service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.166
This condition reduces the emissions of hazardous air pollutants by requiring the facility to install sampling connection systems in such a way that the sampling system is either closed or disposed of in an approved method.

40CFR 63-H.167 (a) (1)
This regulation, 40 CFR 63 Subpart H, contains the standards for open-ended valves or lines subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.
40CFR 63-H.167 (b)
This condition reduces the fugitive emissions of hazardous air pollutants by requiring that when a facility has an open-ended valve or line that is subject to subpart H, there needs to be a valve on the process side that is closed before the second valve is closed. This will greatly reduce the accidental release of fluids that contain hazardous air pollutants.

40CFR 63-H.167 (c)
This regulation, 40 CFR 63 Subpart H, contains the standards for open-ended valves or lines subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.167 (d)
This regulation, 40 CFR 63 Subpart H, contains the standards for open-ended valves or lines subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.168 (b)
This regulation, 40 CFR 63 Subpart H, contains the standards for valves in gas/vapor service and in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.168 (f) (1)
This regulation, 40 CFR 63 Subpart H, contains the standards for valves in gas/vapor service and in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.168 (h)
This regulation, 40 CFR 63 Subpart H, contains the standards for valves in gas/vapor service and in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.168 (i)
This regulation, 40 CFR 63 Subpart H, contains the standards for valves in gas/vapor service and in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.171 (a)
This condition allows the facility to delay repair of a leaking piece of equipment if the facility deems it to be technically infeasible to do so. The repair must be done the next time the process is not in operation.

40CFR 63-H.171 (b)
This condition allows the facility to delay the repair of a leaking piece of equipment if the leaking equipment is isolated and no longer contains organic hazardous air pollutants.

40CFR 63-H.171 (c)
This condition allows facilities the option to delay the repair of certain types of equipment that are leaking hazardous air pollutants if the repair of that equipment would cause more emissions than if they left the equipment alone. In these cases, the material that was purged during the repair must be collected and controlled in order to further reduce the emissions of hazardous air pollutants.

40CFR 63-H.171 (d)
This condition allows the facility to delay the repair of pumps if the repair entails:

- implementing a quality improvement program (QIP) for the pump,
- replacing the pump with one that is much less susceptible to leaking, or
- venting emissions from the pump to a closed-vent system with a control device.
The facility will be given up to six months to repair the leaking pump.

40CFR 63-H.171 (e)
This condition allows the facility to extend a delayed repair beyond a process unit shutdown for valves if certain, specific extenuating circumstances are being faced.

40CFR 63-H.174 (a)
This condition reduces the emissions of hazardous air pollutants by requiring the facility to periodically check for leaks in certain connectors. The facility then has a limited amount of time in order to repair the leak and stop the fugitive emissions of hazardous air pollutants. The facility may reduce the frequency of monitoring for leaks if the percentage of connectors that are leaking is below a certain threshold. Records must be kept and reports must be submitted verifying compliance with this condition.

40CFR 63-H.174 (c) (1) (i)
This condition specifies the different monitoring requirements for connectors that has been opened. The facility must either monitor the connector right away or must automatically count it as a leaking connector when calculating the monitoring frequency of connectors throughout the facility.

40CFR 63-H.174 (c) (2)
This regulation, 40 CFR 63 Subpart H, contains the standards for connectors in gas/vapor service and in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.174 (f)
This condition allows the facility to skip the periodic monitoring of connectors that are not safe for personnel to monitor. A written plan must be developed requiring monitoring as often as possible during times when it is safe to monitor the connector.

40CFR 63-H.174 (g)
This condition allows the facility to delay repairing of a connector if it is deemed to be unsafe for personnel to repair until the next shutdown.

40CFR 63-H.174 (h) (1)
This regulation, 40 CFR 63 Subpart H, contains the standards for connectors in gas/vapor service and in light liquid service and subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.175
This regulation, 40 CFR 63 Subpart H, contains the requirements for a quality improvement program for valves subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.181 (a)
This condition specifies certain recordkeeping requirements for facilities that are subject to Subpart H. These requirements basically require the facility to make all of the records readily accessible so that they may be verified by an inspector.

40CFR 63-H.181 (b)
This condition lists some of the records that the facility must keep in order to verify compliance with Subpart H. This condition specifically requires the company to keep lists of each piece of equipment that is supposed to be monitored according to the provisions in Subpart H.

40CFR 63-H.181 (c)
This regulation, 40 CFR 63 Subpart H, contains recordkeeping requirements for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.181 (d)
This regulation, 40 CFR 63 Subpart H, contains recordkeeping requirements for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.181 (f)
This regulation, 40 CFR 63 Subpart H, contains recordkeeping requirements for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.181 (h)
This regulation, 40 CFR 63 Subpart H, contains recordkeeping requirements for sources subject to a National Emissions Standard for Organic Hazardous Air Pollutants for Equipment Leaks.

40CFR 63-H.182 (d)
This condition lists the items that the facility must enter in their semi-annual periodic report. The items include the number of pieces of equipment that were monitored, how many pieces of equipment were found to be leaking and whether the leaks were repaired.

40CFR 63-NNNNN.9000 (a)
This regulation, 40 CFR 63 Subpart NNNNN, details the applicable emission limits and work practice standards for sources subject to the requirements for National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9000 (b)
This regulation, 40 CFR 63 Subpart NNNNN, details the applicable emission limits and work practice standards for sources subject to the requirements for National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9005 (a)
This regulation, 40 CFR 63 Subpart NNNNN, details the general requirements for sources subject to the requirements for National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9005 (b)
This regulation, 40 CFR 63 Subpart NNNNN, details the general requirements for sources subject to the requirements for National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9005 (c)
This regulation, 40 CFR 63 Subpart NNNNN, details the general requirements for sources subject to the requirements for National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9005 (d)
This regulation, 40 CFR 63 Subpart NNNNN, details the general requirements for sources subject to the requirements for National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9020 (b)
This regulation, 40 CFR 63 Subpart NNNNN, specifies required performance tests and procedures for sources subject to the requirements for National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.
40CFR 63-NNNNN.9020 (e)
This regulation, 40 CFR 63 Subpart NNNNN, specifies required performance tests and procedures for sources subject to the requirements for National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9025 (a)
This regulation, 40 CFR 63 Subpart NNNNN, specifies monitoring installation, operation and maintenance requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9025 (b)
This regulation, 40 CFR 63 Subpart NNNNN, specifies monitoring installation, operation and maintenance requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9030 (a)
This regulation, 40 CFR 63 Subpart NNNNN, specifies initial compliance demonstration requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9030 (b)
This regulation, 40 CFR 63 Subpart NNNNN, specifies initial compliance demonstration requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9035 (b)
This regulation, 40 CFR 63 Subpart NNNNN, specifies continuous compliance monitoring and data collection requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9035 (d)
This regulation, 40 CFR 63 Subpart NNNNN, specifies continuous compliance monitoring and data collection requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9035 (e)
This regulation, 40 CFR 63 Subpart NNNNN, specifies continuous compliance monitoring and data collection requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9040 (c)
This regulation, 40 CFR 63 Subpart NNNNN, specifies continuous compliance emission limits and work practice requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9045 (f)
This regulation, 40 CFR 63 Subpart NNNNN, specifies notification submittal requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9045 (g)
This regulation, 40 CFR 63 Subpart NNNNN, specifies notification submittal requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.
40CFR 63-NNNNN.9050 (a)
This regulation, 40 CFR 63 Subpart NNNNN, specifies report submittal requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9050 (b)
This regulation, 40 CFR 63 Subpart NNNNN, specifies report submittal requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9050 (c)
This regulation, 40 CFR 63 Subpart NNNNN, specifies report submittal requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9050 (d)
This regulation, 40 CFR 63 Subpart NNNNN, specifies report submittal requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9050 (e)
This regulation, 40 CFR 63 Subpart NNNNN, specifies report submittal requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9050 (f)
This regulation, 40 CFR 63 Subpart NNNNN, specifies report submittal requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9055
This regulation, 40 CFR 63 Subpart NNNNN, specifies records retention requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-NNNNN.9060
This regulation, 40 CFR 63 Subpart NNNNN, specifies records retention and format requirements for sources subject to National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors.

40CFR 63-SS.983 (a)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for closed vent systems subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.983 (b)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for closed vent systems subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.983 (c)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for closed vent systems subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.983 (d)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for closed vent systems subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.
40CFR 63-SS.988 (a)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for incinerators, boilers, and process heaters subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.988 (b)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for incinerators, boilers, and process heaters subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.990 (a)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for absorbers, condensers, and carbon adsorbers used as control devices for sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.990 (b)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for absorbers, condensers, and carbon adsorbers used as control devices for sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.994 (a) (2)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for halogen scrubbers and other halogen reduction devices on sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.994 (b)
This regulation, 40 CFR 63 Subpart SS, contains the requirements for halogen scrubbers and other halogen reduction devices on sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.996
This regulation, 40 CFR 63 Subpart SS, contains the general monitoring requirements for control and recovery devices on sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.996 (d)
This regulation, 40 CFR 63 Subpart SS, contains the general monitoring requirements for control and recovery devices on sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.998 (a) (2)
This regulation, 40 CFR 63 Subpart SS, contains the recordkeeping requirements for sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.998 (b)
This regulation, 40 CFR 63 Subpart SS, contains the recordkeeping requirements for sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.
40CFR 63-SS.998 (c).  
This regulation, 40 CFR 63 Subpart SS, contains the recordkeeping requirements for sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.998 (c) (1).  
This regulation, 40 CFR 63 Subpart SS, contains the recordkeeping requirements for sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.998 (c) (2).  
This regulation, 40 CFR 63 Subpart SS, contains the recordkeeping requirements for sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-SS.998 (d) (1).  
This regulation, 40 CFR 63 Subpart SS, contains the recordkeeping requirements for sources subject to a National Emissions Standard for Closed Vent Systems, Control Devices, Recovery Devices and Routing to a Fuel Gas System or a Process.

40CFR 63-UU.1019.  
This regulation, 40 CFR 63 Subpart UU, details applicability requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1022.  
Conditions under this section relate to the identification of equipment subject to Subpart UU. Physical tagging of the equipment (pumps, valves, connectors, etc.) is not required, but is allowed as one method of identification. Other allowable methods are by a site plan, log entries, designation of process boundaries, etc. Equipment identification is needed so equipment subject to leak detection monitoring can be differentiated from equipment not needing monitoring.

40CFR 63-UU.1023 (a).  
This regulation, 40 CFR 63 Subpart UU, details instrument and sensory monitoring requirements for leaks for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1023 (b).  
This regulation, 40 CFR 63 Subpart UU, details instrument and sensory monitoring requirements for leaks for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1023 (c).  
This regulation, 40 CFR 63 Subpart UU, details instrument and sensory monitoring requirements for leaks for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1023 (e).  
This regulation, 40 CFR 63 Subpart UU, details instrument and sensory monitoring requirements for leaks for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1024 (a).  
This regulation, 40 CFR 63 Subpart UU, details leak repair requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.
40CFR 63-UU.1024 (c)
This regulation, 40 CFR 63 Subpart UU, details leak repair requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1024 (d)
This regulation, 40 CFR 63 Subpart UU, details leak repair requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1024 (e)
This regulation, 40 CFR 63 Subpart UU, details leak repair requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1024 (f)
This regulation, 40 CFR 63 Subpart UU, details leak repair requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1025 (b)
This regulation, 40 CFR 63 Subpart UU, details standards for valves in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1025 (c)
This regulation, 40 CFR 63 Subpart UU, details standards for valves in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1025 (d)
This regulation, 40 CFR 63 Subpart UU, details standards for valves in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1025 (e) (1)
This regulation, 40 CFR 63 Subpart UU, details standards for valves in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1025 (e) (2)
This regulation, 40 CFR 63 Subpart UU, details standards for valves in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1025 (e) (3)
This regulation, 40 CFR 63 Subpart UU, details standards for valves in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1026
This regulation, 40 CFR 63 Subpart UU, details standards for pumps in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1026 (b) (4)
This regulation, 40 CFR 63 Subpart UU, details standards for pumps in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1026 (e)
This regulation, 40 CFR 63 Subpart UU, details standards for pumps in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.
40CFR 63-UU.1027 (b)
This regulation, 40 CFR 63 Subpart UU, details standards for connectors in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1027 (e) (1)
This regulation, 40 CFR 63 Subpart UU, details standards for connectors in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1027 (e) (2)
This regulation, 40 CFR 63 Subpart UU, details standards for connectors in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1028
This regulation, 40 CFR 63 Subpart UU, details standards for agitators in gas and vapor service and in light liquid service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1029
This regulation, 40 CFR 63 Subpart UU, details standards for pumps, valves, connectors, and agitators in heavy liquid service; pressure relief devices in liquid service; and instrumentation systems for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1030
This regulation, 40 CFR 63 Subpart UU, details standards for pressure relief devices in gas and vapor service for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1031 (f)
This regulation, 40 CFR 63 Subpart UU, details standards for compressors for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1032
This regulation, 40 CFR 63 Subpart UU, details standards for sampling connection systems for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1033
This regulation, 40 CFR 63 Subpart UU, details standards for open-ended valves or lines for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1035
When a large percentage of the pumps within the facility and subject to this rule leak, a quality improvement program (QIP) to reduce the number of leaking pumps is triggered. Conditions under this section describe the requirements QIP including it's recordkeeping and reporting requirements.

40CFR 63-UU.1036
Conditions under this section provide alternatives to the leak detection and repair standards of sections 63.1025 through 63.1033. They also describe the means of tracking changes of operation between the alternatives.

40CFR 63-UU.1038 (b)
This regulation, 40 CFR 63 Subpart UU, details record keeping requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.
40CFR 63-UU.1038 (c)
This regulation, 40 CFR 63 Subpart UU, details record keeping requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1039 (a)
This regulation, 40 CFR 63 Subpart UU, details reporting requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-UU.1039 (b)
This regulation, 40 CFR 63 Subpart UU, details reporting requirements for sources subject to the National Emission Standards for Equipment Leaks-Control Level 2.

40CFR 63-ZZZZ.6590 (b) (3)
This condition lists the types of engines that are exempt from the provisions in this NESHAP rule. The types of engines include:

Existing 2-stroke lean burn
Existing 4-stroke lean burn
Existing compression ignition
Existing emergency
Existing limited-use
Existing landfill/digester gas fuel-fired

6NYCRR 201-6.5 (f)
This regulation defines in general terms under what circumstances changes would be allowed without a permit modification provided the permit contains sufficient operational flexibility provisions.

6NYCRR 201-7
This regulation sets forth an emission cap that cannot be exceeded by the facility. In this permit that cap is

6NYCRR 204-2.1
This condition states the submission requirements for the NOx Budget Trading Program. The Program is designed to mitigate the interstate transport of ground level ozone and nitrogen oxides, a ground level ozone precursor.

6NYCRR 204-4.1
This condition covers the compliance certification report requirements for the NOx Budget Program.

6NYCRR 204-5.3
This condition lists the allocation procedures for this unit in the NOx Budget Program.

6NYCRR 204-7.1
This condition lists the requirements for transfer of allowances in the NOx Budget Program.

6NYCRR 204-8.1
This condition lists the general requirements for the NOx Budget trading program. They include, but are not limited to monitoring requirements, certification, record keeping and reporting.

6NYCRR 204-8.2
This condition covers the procedures for initially certifying and recertifying the monitoring systems of the unit meet the requirements of the NOx Budget Program.
6NYCRR 204-8.3
This condition states the requirements for data substitution during times when the monitoring systems to not meet applicable quality assurance requirements.

6NYCRR 204-8.6
6 NYCRR 204-8 has the monitoring and reporting requirements for the NOx Budget Trading Program.

6NYCRR 212
6 NYCRR Part 212 contains all the requirements for General Process Sources.

6NYCRR 212 .10 (a) (2)
6 NYCRR 212.10(a)(2) has the Reasonably Available Control Technology requirements for major facilities in upstate NY.

6NYCRR 212 .10 (c) (4) (i)
VOC removal efficiency greater than 81% is considered RACT.

6NYCRR 212 .10 (c) (4) (iii)
This rule allows those sources which cannot achieve an overall removal efficiency of 81% or use coatings that don't exceed 3.5 lbs. VOC/gallon as applied for technological or economic reasons to use process specific reasonably available control technology (RACT) demonstrations for sources of volatile organic compounds (VOC) which are acceptable to the department and have been submitted to EPA for approval as a revision to the State Implementation Plan by the department.

6NYCRR 212 .2
6NYCRR 212.2 specifies that the commissioner shall issue an environmental rating for each air contaminant from each emission point when an application for an air permit is made.

6NYCRR 212 .3 (a)
This rule requires compliance with the degree of control specified in Tables 2, 3 and 4 for existing (on or before July 1, 1973) process emission sources.

6NYCRR 212 .4 (a)
This rule requires compliance with the degree of control specified in Tables 2, 3 and 4 for new (after July 1, 1973) process emission sources.

6NYCRR 212 .4 (b)
212.4(b) establishes a limit on gas and liquid particulates.

6NYCRR 212 .4 (c)
This rule requires existing sources (in operation after July 1, 1973) of solid particulates with environmental rating of B or C which are not subject to Table 5 "Processes for which Permissible Emission Rate is Based on Process Weight, to be limited to an particulate emission rate not to exceed 0.05 grains per dry standard cubic foot.

6NYCRR 212 .5 (d)
This section specifies that if best available control technologies are implemented the commissioner may specify, under certain situations, a less restrictive emission rate.

6NYCRR 212 .6 (a)
This rule specifies an opacity limitation of less than 20% for any six consecutive minute period for all process emission sources.
6NYCRR 212.9 (b)
This section refers to Table 2 which specifies the degree of control required for Gases and Liquid Particulate Emissions (Environmental Rating of A, B, C or D) and Solid Particulate Emissions (Environmental Rating A or D) but excluding Volatile Organic Compound Emissions in the New York City Metropolitan Area.

6NYCRR 225-1.2 (a) (2)
This regulation prohibits any person from selling, offering for sale, purchasing or using any fuel which contains sulfur in a quantity exceeding the limitations set forth in Table 1, Table 2, or Table 3 of this section.

6NYCRR 225-1.7 (c)
This regulation requires that measurements be made daily of the rate of each fuel burned, the gross heat content and ash content of each fuel burned (determined at least once per week), and the average electrical output (daily) and hourly generation rate.

6NYCRR 226
This regulation specifies the general requirements, equipment specifications and operating requirements for open-top vapor, conveyorized and cold cleaning degreasers.

6NYCRR 227.2 (b) (1)
This regulation is from the 1972 version of Part 227 and still remains as part of New York's SIP. The rule establishes a particulate limit of 0.10 lbs/mmBtu based on a 2 hour average emission for any oil fired stationary combustion installation.

6NYCRR 227-1.2 (a) (1)
This regulation establishes a particulate emission limit in terms of lbs per mmBtu of heat input for stationary combustion units of greater than 250 mmBtu/hr heat input capacity which fire coal, oil, or coal derived fuels.

6NYCRR 227-1.3
This regulation requires a limitation and compliance monitoring for opacity from a stationary combustion installation.

6NYCRR 227-1.3 (a)
This regulation prohibits any person from operating a stationary combustion installation which emits smoke equal to or greater than 20% opacity except for one six-minute period per hour of not more than 27% opacity.

6NYCRR 227-2.2 (b) (1)
227-2.2(b)(1) defines the term "actual 1990 baseline emissions"

6NYCRR 227-2.4 (a) (1)
This condition lists the emission limitations for very large boilers.

6NYCRR 227-2.4 (b) (1)
This paragraph provides a table for gas only, gas and/or oil firing capable, pulverized coal, and overfeed stoker emission limits. Compliance is determined by a stack test.

6NYCRR 227-2.4 (d)
This rule specifies that the reasonably available control technology (RACT) requirement for small boilers (< or = 50 million BTUs/hr) at Title V facilities consists of an annual tune-up.

6NYCRR 227-2.6
This regulation establishes the compliance testing, monitoring, and reporting requirements for NOx RACT affected stationary combustion installations.

6NYCRR 229.3(e)(1)
This regulation requires fixed roof storage tanks subject to Part 229 to be equipped with an internal floating roof with a liquid-mounted primary seal and gasketed fittings, or equivalent control. Furthermore, replacement of other than liquid mounted seals is to be performed only when the tank is cleaned and gas-freed for other purposes.

6NYCRR 229.3(e)(2)(iv)
This section requires a tank with submerged fill for storage of volatile organic liquids.

6NYCRR 229.3(e)(2)(v)
This section requires the tank to be equipped with conservation vents for storage of volatile organic liquids.

6NYCRR 229.5(d)
This section requires facilities subject to the requirements under Part 229.3, to maintain a record of the capacity of the volatile organic liquid storage tanks, in gallons, for a period of 5 years.

6NYCRR 231-2
The provisions of Subpart 231-2 apply to new or modified major facilities. The contaminants of concern state-wide are nitrogen oxides and volatile organic compounds since New York State is located in the ozone transport region and because there are ozone non-attainment areas within the state. In addition, particulate matter less than 10 microns in size (PM-10) is a non-attainment contaminant in Manhattan County.

6NYCRR 231-2.6
The provisions of Subpart 231-2 apply to new or modified major facilities. The contaminants of concern state-wide are nitrogen oxides and volatile organic compounds since New York State is located in the ozone transport region and because there are ozone non-attainment areas within the state. In the New York City metropolitan area, carbon monoxide is also a non-attainment contaminant. In addition, particulate matter less than 10 microns in size (PM-10) is a non-attainment contaminant in Manhattan County.

The requirements and criteria for creating and certifying emission reduction credits (ERCs) are set forth in section 231-2.6.

Compliance Certification
Summary of monitoring activities at MOMENTIVE PERFORMANCE MATERIALS:

Basis for Monitoring
6 NYCRR 212.9(b)
C-27018     Emission Point 23002
Water flow rate to the scrubber is monitored to meet required control efficiency. The lower limit of monitoring ensures compliance with all process operations. Engineering calculations is used as evidence of compliance with VOC control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
F-INISH     Emission Point: 32028
Scrubber water flow during stripping is monitored to ensure sufficient control efficiency. The lower limit of monitoring ensures compliance with all process batch operations. Engineering calculations is used as evidence of compliance with contaminant control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
C-27018     Emission Point: 35006
The water flow to the scrubber is monitored to ensure the scrubber is operating at the required control efficiency.

6 NYCRR 212.9(b)
F-INISH     Emission Point 32026, 32027
Condenser outlet temperature is monitored once per batch to ensure sufficient control efficiency. This process emits through two emission points 32026 and 32027. The upper limit of monitoring ensures compliance with all process batch operations. Engineering calculations is used as evidence of compliance with contaminant control efficiency when the measured temperature rises above the upper limit of monitoring.

6 NYCRR 212.9(b)
C-27018     Emission Point: 31041
Water flow to the scrubbers is monitored to ensure sufficient control efficiency. The lower limit of monitoring ensures compliance with all process batch operations. Engineering calculations is used as evidence of compliance with contaminant control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
C-27018     Emission Point 32050
Each condenser's outlet gas temperature is monitored when the ERP of non-VOCs (Octamethylcyclotetra Siloxane) exceeds 10 lb/hr and when "A" rated contaminant ERPs exceeds 1 lb/hr. This process emits through five emission points 32040, 32042, 32044, 32049 and 32050. Engineering calculations is used as evidence of compliance with control efficiency when the measured parameters exceeds the upper limit of monitoring.

6 NYCRR 212.9(b)
F-INISH     Emission Point: 37016
For grade 88476 (main process) the condenser outlet gas temperature is maintained to ensure sufficient control efficiency. The upper limit of monitoring ensures compliance with all process batch operations. Engineering calculations is used as evidence of compliance with contaminant control efficiency when the measured temperature rises above the upper limit of monitoring.

6 NYCRR 212.9(b)
F-INISH Emission Point: 85008
Outlet temperature of condensing column 85TST is monitored to ensure sufficient control efficiency. The lower limit of monitoring ensures compliance with all process batch operations. Engineering calculations is used as evidence of compliance with contaminant control efficiency when the measured parameter exceeds the upper limit of monitoring.

6 NYCRR 212.9(b)
C-27018 Emission Point: 62005
The Venturi water flow (ES-62EVS) is monitored to ensure sufficient control efficiency. Engineering calculations is used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
C-27018 Emission Point 71001
Water scrubber flow creates the proper vacuum to operate the process and removes air contaminants. Water flow to the scrubber is recorded (on/off) to ensure sufficient control efficiency. The lower limit of monitoring ensures compliance with all process batch operations. Engineering calculations is used as evidence of compliance with contaminant control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
F-INISH Emission Points 24946, 24947
Water flow for eductor scrubber (24SRC) is recorded (on/off) to ensure sufficient control efficiency. This process is controlled by one eductor scrubber which emits through two emission points 24946 and 24947. The lower limit of monitoring ensures compliance with all process batch operations.

6 NYCRR 212.9(b)
C-27018 Emission Point: 62011
The Venturi water flow (ES-62WVS) is monitored to ensure sufficient control efficiency. Engineering calculations is used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
C-27018 Emission Point: 62005
The tower water flow (ES-62EST) is monitored to ensure sufficient control efficiency. Engineering calculations is used as evidence of compliance with control efficiency when the
measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
F-INISH Emission Point: 71013
Water flow to the scrubber is recorded (on/off) to ensure sufficient control efficiency.

6 NYCRR 212.9(b)
C-27018 Emission Point 35031
Scrubber water flow rate is monitored to ensure it is greater than or equal to 3 gallons per minute. Engineering calculations is used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
C-27018 Emission Point 27018
The water flow to the scrubber is monitored to ensure the scrubber is operating at the required control efficiency. Engineering calculations is used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 212.9(b)
C-27018 Emission Point: 24944, 24945
High acid scrubber water flow is recorded (on/off) for each batch to ensure sufficient control efficiency.

6 NYCRR 212.9(b)
C-27018 Emission Point: 62011
The tower water flow (62WST) is monitored to ensure sufficient control efficiency. Engineering calculations is used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring.

6 NYCRR 243-1.6(c)
As of the allowance transfer deadline for a control period, the owners and operators of each CAIR NOx Ozone Season source and each CAIR NOx Ozone Season unit at the source shall hold, in the source's compliance account, CAIR NOx Ozone Season allowances available for compliance deductions for the control period under section 243-6.5(a) in an amount not less than the tons of total nitrogen oxides emissions for the control period from all CAIR NOx Ozone Season units at the source, as determined in accordance with Subpart 243-8. The CAIR NOx ozone season is the period beginning May 1 of a calendar year, except as provided in section 243-1.6(c)(2), and ending on September 30 of the same year, inclusive.

A CAIR NOx Ozone Season unit shall be subject to the requirements under paragraph (c)(1) of this section for the control period starting on the later of May 1, 2009 or the deadline for meeting the unit's monitor certification requirements under sections 243-8.1(b)(1), (2), (3), or (7) and for
each control period thereafter.

A CAIR NOx Ozone Season allowance shall not be deducted, for compliance with the requirements under paragraph (c)(1) of this section, for a control period in a calendar year before the year for which the CAIR NOx Ozone Season allowance was allocated. CAIR NOx Ozone Season allowances shall be held in, deducted from, or transferred into or among CAIR NOx Ozone Season Allowance Tracking System accounts in accordance with Subparts 243-6, 243-7, and 243-9.

A CAIR NOx Ozone Season allowance is a limited authorization to emit one ton of nitrogen oxides in accordance with the CAIR NOx Ozone Season Trading Program. No provision of the CAIR NOx Ozone Season Trading Program, the CAIR permit application, the CAIR permit, or an exemption under section 243-1.5 and no provision of law shall be construed to limit the authority of the State or the United States to terminate or limit such authorization.

A CAIR NOx Ozone Season allowance does not constitute a property right.

Upon recordation by the Administrator under Subpart 243-6, 243-7, or 243-9, every allocation, transfer, or deduction of a CAIR NOx Ozone Season allowance to or from a CAIR NOx Ozone Season source's compliance account is incorporated automatically in any CAIR permit of the source.

6NYCRR 243-1.6(d)
If a CAIR NOx Ozone Season source emits nitrogen oxides during any control period in excess of the CAIR NOx Ozone Season emissions limitation, then:

(1) the owners and operators of the source and each CAIR NOx Ozone Season unit at the source shall surrender the CAIR NOx Ozone Season allowances required for deduction under section 243-6.5(d)(1) and pay any fine, penalty, or assessment or comply with any other remedy imposed, for the same violations, under the Act or applicable State law; and

(2) each ton of such excess emissions and each day of such control period shall constitute a separate violation of this Subpart, the Act, and applicable State law.

6NYCRR 243-1.6(e)
Unless otherwise provided, the owners and operators of the CAIR NOx Ozone Season source and each CAIR NOx Ozone Season unit at the source shall keep on site at the source each of the following documents for a period of five years from the date the document is created. This period may be extended for cause, at any time before the end of five years, in writing by the department or the Administrator.
(i) The certificate of representation under section 243-2.4 for the CAIR designated representative for the source and each CAIR NOx Ozone Season unit at the source and all documents that demonstrate the truth of the statements in the certificate of representation; provided that the certificate and documents shall be retained on site at the source beyond such five-year period until such documents are superseded because of the submission of a new certificate of representation under section 243-2.4 changing the CAIR designated representative.

(ii) All emissions monitoring information, in accordance with Subpart 243-8, provided that to the extent that Subpart 243-8 provides for a three-year period for recordkeeping, the three-year period shall apply.

(iii) Copies of all reports, compliance certifications, and other submissions and all records made or required under the CAIR NOx Ozone Season Trading Program.

(iv) Copies of all documents used to complete a CAIR permit application and any other submission under the CAIR NOx Ozone Season Trading Program or to demonstrate compliance with the requirements of the CAIR NOx Ozone Season Trading Program.

6NYCRR 243-8.1
The owners and operators, and to the extent applicable, the CAIR designated representative, of a CAIR NOx Ozone Season unit, shall comply with the monitoring, recordkeeping, and reporting requirements as provided in this Subpart and in Subpart H of 40 CFR Part 75. For purposes of complying with such requirements, the definitions in section 243-1.2 and in 40 CFR 72.2 shall apply, and the terms "affected unit," "designated representative," and "continuous emission monitoring system" (or "CEMS") in 40 CFR Part 75 shall be deemed to refer to the terms "CAIR NOx Ozone Season unit," "CAIR designated representative," and "continuous emission monitoring system" (or "CEMS") respectively, as defined in section 243-1.2. The owner or operator of a unit that is not a CAIR NOx Ozone Season unit but that is monitored under 40 CFR 75.72(b)(2)(ii) shall comply with the same monitoring, recordkeeping, and reporting requirements as a CAIR NOx Ozone Season unit.

'Requirements for installation, certification, and data accounting.' The owner or operator of each CAIR NOx Ozone Season unit shall:

(1) install all monitoring systems required under this Subpart for monitoring NOx mass emissions and individual unit heat input (including all systems required to monitor NOx emission rate, NOx concentration, stack gas moisture content, stack gas flow rate, CO2 or O2 concentration, and fuel flow rate, as applicable, in accordance with 40 CFR 75.71 and 40 CFR 75.72);

(2) successfully complete all certification tests required under section 243-8.2 and meet all other requirements of this Subpart and 40 CFR Part 75 applicable to the monitoring systems under
paragraph (a)(1) of this section; and

(3) record, report, and quality-assure the data from the monitoring systems under paragraph (a)(1) of this section.

6NYCRR 243-8.1
No owner or operator of a CAIR NOx Ozone Season unit shall use any alternative monitoring system, alternative reference method, or any other alternative to any requirement of this Subpart without having obtained prior written approval in accordance with section 243-8.6.

No owner or operator of a CAIR NOx Ozone Season unit shall operate the unit so as to discharge, or allow to be discharged, NOx emissions to the atmosphere without accounting for all such emissions in accordance with the applicable provisions of this Subpart and 40 CFR Part 75.

No owner or operator of a CAIR NOx Ozone Season unit shall disrupt the continuous emission monitoring system, any portion thereof, or any other approved emission monitoring method, and thereby avoid monitoring and recording NOx mass emissions discharged into the atmosphere or heat input, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of this Subpart and 40 CFR Part 75.

No owner or operator of a CAIR NOx Ozone Season unit shall retire or permanently discontinue use of the continuous emission monitoring system, any component thereof, or any other approved monitoring system under this Subpart, except under any one of the following circumstances: (i) during the period that the unit is covered by an exemption under section 243-1.5 that is in effect; (ii) the owner or operator is monitoring emissions from the unit with another certified monitoring system approved, in accordance with the applicable provisions of this Subpart and 40 CFR Part 75, by the department for use at that unit that provides emission data for the same pollutant or parameter as the retired or discontinued monitoring system; or (iii) the CAIR designated representative submits notification of the date of certification testing of a replacement monitoring system for the retired or discontinued monitoring system in accordance with section 243-8.2(d)(3)(i).

6NYCRR 243-8.3
Whenever any monitoring system fails to meet the quality-assurance and quality-control requirements or data validation requirements of 40 CFR Part 75, data shall be substituted using the applicable missing data procedures in Subpart D or Subpart H of, or appendix D or appendix E to, 40 CFR Part 75.
6NYCRR 243-8.5(d)
The CAIR designated representative shall submit quarterly reports, as follows:

If the CAIR NOx Ozone Season unit is subject to an Acid Rain emissions limitation or a CAIR NOx emissions limitation or if the owner or operator of such unit chooses to report on an annual basis under this Subpart, the CAIR designated representative shall meet the requirements of Subpart H of 40 CFR Part 75 (concerning monitoring of NOx mass emissions) for such unit for the entire year and shall report the NOx mass emissions data and heat input data for such unit, in an electronic quarterly report in a format prescribed by the Administrator, for each calendar quarter beginning with:

(i) for a unit that commences commercial operation before July 1, 2007, the calendar quarter covering May 1, 2008 through June 30, 2008;

(ii) for a unit that commences commercial operation on or after July 1, 2007, the calendar quarter corresponding to the earlier of the date of provisional certification or the applicable deadline for initial certification under section 243-8.1(b), unless that quarter is the third or fourth quarter of 2007 or the first quarter of 2008, in which case reporting shall commence in the quarter covering May 1, 2008 through June 30, 2008.

The CAIR designated representative shall submit each quarterly report to the Administrator within 30 days following the end of the calendar quarter covered by the report. Quarterly reports shall be submitted in the manner specified in 40 CFR 75.73(f).

For CAIR NOx Ozone Season units that are also subject to an Acid Rain emissions limitation or the CAIR NOx Annual Trading Program, CAIR SO2 Trading Program, or the Mercury Reduction Program for Coal-Fired Electric Utility Steam Generating Units (6 NYCRR Part 246), quarterly reports shall include the applicable data and information required by Subparts F through I of 40 CFR Part 75 as applicable, in addition to the NOx mass emission data, heat input data, and other information required by this Subpart.

6NYCRR 243-8.5(e)
The CAIR designated representative shall submit to the Administrator a compliance certification (in a format prescribed by the Administrator) in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit’s emissions are correctly and fully monitored. The certification shall state that:

(1) the monitoring data submitted were recorded in accordance with the applicable requirements of this Subpart and 40 CFR Part 75, including the quality assurance procedures and specifications;

(2) for a unit with add-on NOx emission controls and for all hours where NOx data are
substituted in accordance with 40 CFR 75.34(a)(1), the add-on emission controls were operating within the range of parameters listed in the quality assurance/quality control program under appendix B to 40 CFR Part 75 and the substitute data values do not systematically underestimate NOx emissions; and

(3) for a unit that is reporting on a control period basis under subparagraph (d)(2)(ii) of this section, the NOx emission rate and NOx concentration values substituted for missing data under Subpart D of 40 CFR Part 75 are calculated using only values from a control period and do not systematically underestimate NOx emissions.

40 CFR 60.48c(g)(2) Subpart Dc

Emission Unit: U-28002 Process: 410 & 411
Emission Unit: H-OFURN Process: 418 & 426

This facility currently does not have the fuel oil line connected to Boiler #18 and therefore, cannot operate Process 411. The facility also has not replaced the burners of the 21 or 35 Hot Oil Furnaces of Process 426. After these Processes becomes operable, the certification will become applicable to the respective Process 411 and 426.

Any owner or operator subject to this part shall furnish the Administrator with the following information:

1) a notification of the date construction or reconstruction commenced, post marked no later than 30 days after such date;
2) a notification of the anticipated date of initial start up, post marked not more than 60 days not less than 30 days prior to such date;
3) a notification of the actual date of initial start up, post marked within 15 days after such date;
4) a notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless the change is specifically exempted under this part. The notice shall be post marked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productive capability of the facility before and after the change, and the expected completion date of the change. The Administrator may request additional information regarding the change;
5) a notification of any physical or operational change to an existing facility which may increase the emission rate of any air pollutant to which a standard applies, unless the change is specifically exempted under 40 CFR Part 60. The notice shall be post marked 60 days or as soon as practicable before the change is commenced and shall include information describing the precise nature of the change, present and proposed emission control systems, productivity capability of the facility before and after the change, and the expected completion date of the change. The Administrator and/or this Department may request additional information regarding the change.
40 CFR 63.139(c)
C-27018
Process 422  Emission Source WTPAS
Process 424  Emission Source WTPAS
Process 424  Emission Source WTPAS
Process 425  Emission Source WTPAS

The control device shall be designed and operated in accordance with paragraph (c)(1), (c)(2), (c)(3), (c)(4), or (c)(5) of this section.

(5) Any other control device used shall, alone or in combination with other control devices, reduce the total organic compound emissions, less methane and ethane, or total organic hazardous air pollutants emissions vented to the control device by 95 percent by weight or greater or achieve an outlet total organic compound concentration, less methane and ethane, or total organic hazardous air pollutants concentration of 20 parts per million by volume, whichever is less stringent. The 20 parts per million by volume performance standard is not applicable to compliance with the provisions of §63.134 or §63.135 of this subpart.

Emissions from these sources (PKSDT, 30WWT, and 20KEQ) will be vented to the RKI (RKIAB) or Fixed Box #2 Incinerator (FBIAB).

40 CFR 63.140
C-27018
Process 422  Emission Source WTPAS
Process 424  Emission Source WTPAS
Process 424  Emission Source WTPAS
Process 425  Emission Source WTPAS

(a) Delay of repair of equipment for which a control equipment failure or a gap, crack, tear, or hole has been identified, is allowed if the repair is technically infeasible without a shutdown, as defined in §63.101 of subpart F of this part, or if the owner or operator determines that emissions of purged material from immediate repair would be greater than the emissions likely to result from delay of repair. Repair of this equipment shall occur by the end of the next shutdown.

(b) Delay of repair of equipment for which a control equipment failure or a gap, crack, tear, or hole has been identified, is allowed if the equipment is emptied or is no longer used to treat or manage Group 1 wastewater streams or residuals removed from Group 1 wastewater streams.

(c) Delay of repair of equipment for which a control equipment failure or a gap, crack, tear, or hole has been identified is also allowed if additional time is necessary due to the unavailability of parts beyond the control of the owner or operator. Repair shall be completed as soon as practical. The owner or operator who uses this provision shall comply with the requirements of §63.147(b)(7) to document the reasons that the delay of repair was necessary.

40 CFR 63.143(c)
C-27018
Process 422  Emission Source WTPAS
Process 424  Emission Source WTPAS
Process 424  Emission Source WTPAS
Process 425  Emission Source WTPAS

(e) Except as provided in paragraphs (e)(4) and (e)(5) of this section, for each control device used
to comply with the requirements of §§63.133 through 63.139 of this subpart, the owner or
operator shall comply with the requirements in §63.139(d) of this subpart, and with the
requirements specified in paragraph (e)(1), (e)(2), or (e)(3) of this section.

40 CFR 63.143(g)
C-27018
Process 422  Emission Source WTPAS
Process 424  Emission Source WTPAS
Process 424  Emission Source WTPAS
Process 425  Emission Source WTPAS

Monitoring equipment shall be installed, calibrated, and maintained according to the
manufacturer's specifications or other written procedures that provide adequate assurance that the
equipment would reasonably be expected to monitor accurately.

40 CFR 63.145(h)
Emission Unit: C-27018
Emission Unit: C-27035
Emission Unit: F-INISH

When Group 1 wastewaters are treated using the biosystems, the Volatile Suspended Solids
(VSS) will be sampled quarterly to demonstrate enhanced biological treatment. If the VSS
concentration falls below 1000 mg/L, WATER9 modeling will be used to demonstrate 99%
removal by biological treatment.

40 CFR 63.998(a)(2)
C-27018
C-27035
F-INISH

(i) Upon request, the owner or operator shall make available to the Administrator such records as
may be necessary to determine the conditions of performance tests performed pursuant to
§§63.988(b), 63.990(b), 63.994(b), or 63.995(b).

(ii) Nonflare control device and halogen reduction device performance test records.
(A) General requirements. Each owner or operator subject to the provisions of this subpart shall
keep up-to-date, readily accessible continuous records of the data specified in paragraphs
(a)(2)(ii)(B) through (C) of this section, as applicable, measured during each performance test
performed pursuant to §63.988(b), §63.990(b), §63.994(b), or §63.995(b), and also include that
data in the Notification of Compliance Status required under §63.999(b). The same data specified
in this section shall be submitted in the reports of all subsequently required performance tests
where either the emission control efficiency of a combustion device, or the outlet concentration
of TOC or regulated material is determined. This permit condition becomes effective on the compliance date of May 10, 2008.

40 CFR 63.998(a)(2)
C-27018
C-27035
F-INISH

(B) Nonflare combustion device. Where an owner or operator subject to the provisions of this paragraph seeks to demonstrate compliance with a percent reduction requirement or a parts per million by volume requirement using a nonflare combustion device the information specified in (a)(2)(ii)(B)(1) through (6) of this section shall be recorded.

(C)

(D) Halogen reduction devices. When using a scrubber following a combustion device to control a halogenated vent stream, record the information specified in paragraphs (a)(2)(ii)(D)(1) through (3) of this section.

40 CFR 63.998(a)(2)
C-27018
C-27035
F-INISH

(C) Other nonflare control devices. Where an owner or operator seeks to use an absorber, condenser, or carbon adsorber as a control device, the information specified in paragraphs (a)(2)(ii)(C)(1) through (5) of this section shall be recorded, as applicable.

40 CFR 63.1203(a)(5)(i)
This condition was revised to expire 10/14/08 when the identical condition under 40 CFR 63.1219(a) becomes effective.

When Group 1 wastewaters are treated using the biosystems, the Volatile Suspended Solids (VSS) will be sampled quarterly to demonstrate enhanced biological treatment. If the VSS concentration falls below 1000 mg/L, WATER9 modeling will be used to demonstrate 99% removal by biological treatment.

40 CFR 63.1209(j)(2)
C-27018
Emission Points: 97001, 97002 & 97003

As an indicator of gas residence time in the control device, you must establish and comply with a limit on the maximum flue gas flowrate, the maximum production rate, or another parameter that you document in the site-specific test plan as an appropriate surrogate for gas residence time, as the average of the maximum hourly rolling averages for each run and you must comply with this
limit on a hourly rolling average basis.
If the monitored parameter exceeds the limitation, the automatic waste feed cutoff must
immediately and automatically cut off of the hazardous waste feed, except as provided by Section
63.1206(c)(3)(viii). In accordance with 63.1206(c)(2)(v)(2), an exceedance of this emission
standard is not a violation of 40 CFR Part 63, Subpart EEE if you take the corrective measures
prescribed in the startup, shutdown, and malfunction plan.

This condition also satisfies the requirements of:
40 CFR 63.1209(k)(3), dioxins and furans – maximum flue gas flowrate or production rate
40 CFR 63.1209(m)(2), particulate matter – maximum flue gas flow rate or production rate
40 CFR 63.1209(n)(5), semivolatile metals and low volatility metals - maximum flue gas flow
rate or production rate
40 CFR 63.1209(o)(3)(v), hydrogen chloride and chlorine gas – wet scrubber

40 CFR 63.1209(j)(3)
C-27018 Process: 422, 423
You must establish limits on the maximum pumpable and total (i.e., pumpable and
nonpumpable) hazardous waste feedrate for each location where hazardous waste is fed, you
must establish the limits as the average of the maximum hourly rolling averages for each run, and
you must comply with the feedrate limit(s) on a hourly rolling average basis.
If the monitored parameter exceeds the limitation, the automatic waste feed cutoff must
immediately and automatically cut off of the hazardous waste feed, except as provided by Section
63.1206(c)(3)(viii). In accordance with 63.1206(c)(2)(v)(2), an exceedance of this emission
standard is not a violation of 40 CFR Part 63, Subpart EEE if you take the corrective measures
prescribed in the startup, shutdown, and malfunction plan. The total hazardous waste feed rate is
monitored continuously and is limited to a maximum of 751 pounds per hour on an hourly rolling
average basis. This condition also satisfies the requirements of 40 CFR 63.1209(k)(4), dioxins
and furans – maximum hazardous waste federate.

40 CFR 63.1209(j)(4)
C-27018 Process: 422, 423
You must specify operating parameters and limits to ensure that good operation of each
hazardous waste firing system is maintained.
If the monitored parameter exceeds the limitation, the automatic waste feed cutoff must
immediately and automatically cut off of the hazardous waste feed, except as provided by Section
63.1206(c)(3)(viii). In accordance with 63.1206(c)(2)(v)(2), an exceedance of this emission
standard is not a violation of 40 CFR Part 63, Subpart EEE if you take the corrective measures
prescribed in the startup, shutdown, and malfunction plan.
Air atomization pressure is monitored continuously and is maintained at a minimum of 78 on an
hourly rolling average basis.
40 CFR 63.1209(j)(4)  
C-27018  
Process: 424, 425  
You must specify operating parameters and limits to ensure that good operation of each hazardous waste firing system is maintained. If the monitored parameter exceeds the limitation, the automatic waste feed cutoff must immediately and automatically cut off of the hazardous waste feed, except as provided by Section 63.1206(c)(3)(viii). In accordance with 63.1206(c)(2)(v)(2), an exceedance of this emission standard is not a violation of 40 CFR Part 63, Subpart EEE if you take the corrective measures prescribed in the startup, shutdown, and malfunction plan. Steam atomization pressure is monitored continuously and is maintained at a minimum of 80.6 psig on an hourly rolling average basis.

40 CFR 63.1209(j)(4)  
C-27018  
Process: 422, 423  
You must specify operating parameters and limits to ensure that good operation of each hazardous waste firing system is maintained. If the monitored parameter exceeds the limitation, the automatic waste feed cutoff must immediately and automatically cut off of the hazardous waste feed, except as provided by Section 63.1206(c)(3)(viii). In accordance with 63.1206(c)(2)(v)(2), an exceedance of this emission standard is not a violation of 40 CFR Part 63, Subpart EEE if you take the corrective measures prescribed in the startup, shutdown, and malfunction plan. Steam atomization pressure is monitored continuously and is maintained at a minimum of 126 psig on an hourly rolling average basis.

40 CFR 63.1209(m)(1)(i)(B)(1)

Process: 423  
Emission Source: IWS2C  
For sources equipped with wet scrubbers, including ionizing wet scrubbers, high energy wet scrubbers such as venturi, hydrosonic, collision, or free jet wet scrubbers, and low energy wet scrubbers, you must establish limits to ensure that the solids content of the scrubber liquid does
not exceed levels (established) during the performance test, by either (i) Establishing a limit on solids content of the scrubber liquid using a CMS or by manual sampling and analysis; or (ii) Establishing a minimum blowdown rate using a CMS and either a minimum scrubber tank volume or liquid level using a CMS. If you elect to monitor solids content manually, you must sample and analyze the scrubber liquid hourly unless you support an alternative monitoring frequency in the performance test plan that you submit for review and approval. If the monitored parameter exceeds the limitation, the automatic waste feed cutoff must immediately and automatically cut off of the hazardous waste feed, except as provided by Section 63.1206(c)(3)(viii). In accordance with 63.1206(c)(2)(v)(2), an exceedance of this emission standard is not a violation of 40 CFR Part 63, Subpart EEE if you take the corrective measures prescribed in the startup, shutdown, and malfunction plan. The facility IWS system has a constant overflow sump instead of a recirculating tank system. Compliance with the requirement is achieved with a minimum IWS voltage of 17 kV for each IWS unit.

40 CFR 63.1209(p)
C-27018
Process: 422 ES/C: 96RKI
Process: 423 ES/C: 96RKI
This condition reduces the emissions of hazardous air pollutants by requiring the facility to keep the pressure inside of the combustion chamber of the hazardous waste combustor under that of the atmosphere outside of the combustor. This reduces the chance of leaks from the combustor escaping into the atmosphere.

40 CFR 63.2450(f)
C-27018 Emission Point 62007
If you use a halogen reduction device to reduce hydrogen halide and halogen HAP emissions from halogenated vent streams, you must meet the requirements of §63.994 and the requirements referenced therein. If you use a halogen reduction device before a combustion device, you must determine the halogen atom emission rate prior to the combustion device according to the procedures in §63.115(d)(2)(v).

40 CFR 63.2455(a), Subpart FFFF
Emission Unit: F-INISH Emission Point: 76006
Water flow to the third stage of the scrubber will be monitored to ensure sufficient control efficiency. The lower limit of monitoring ensures compliance with all process batch operations under 6 NYCRR 212.9(b). Engineering calculations will be used as evidence of compliance under 6 NYCRR 212.9(b) with contaminant control efficiency when the measured flow rate falls below the lower limit of monitoring. Compliance with this monitoring requirement assures compliance with Subpart FFFF 63.2465(a) and 212.9(b) per the Pre-Compliance Report.

40 CFR 63.2455(a), Subpart FFFF
Emission Unit: F-INISH  Emission Point: 76006
Water flow to the second stage of the scrubber will be monitored to ensure sufficient control efficiency. The lower limit of monitoring ensures compliance with all process batch operations under 6 NYCRR 212.9(b). Engineering calculations will be used as evidence of compliance under 6 NYCRR 212.9(b) with contaminant control efficiency when the measured flow rate falls below the lower limit of monitoring. Compliance with this monitoring requirement assures compliance with Subpart FFFF 63.2465(a) and 212.9(b) per the Pre-Compliance Report.

40CFR 63.2455(a), Subpart FFFF
Emission Unit: F-INISH  Emission Point: 76006
Water flow to the first stage of the scrubber will be monitored to ensure sufficient control efficiency. The lower limit of monitoring ensures compliance with all process batch operations under 6 NYCRR 212.9(b). Engineering calculations will be used as evidence of compliance under 6 NYCRR 212.9(b) with contaminant control efficiency when the measured flow rate falls below the lower limit of monitoring. Compliance with this monitoring requirement assures compliance with Subpart FFFF 63.2465(a) and 212.9(b) per the Pre-Compliance Report.

40CFR 63.2455(a), Subpart FFFF
Emission Unit: C-27018  Emission Point: 62007
The scrubber water flow (ES-MCSV5) is monitored to ensure sufficient control efficiency. Engineering calculations will be used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring. Compliance with this monitoring requirement assures compliance with Subpart FFFF 63.2465(a) and 212.9(b) per the Pre-Compliance Report.

40CFR 63.2455(a), Subpart FFFF
F-INISH  Emission Point: 76006
Spray tower flow rate will be monitored to ensure sufficient control efficiency. The lower limit of monitoring ensures compliance with all process batch operations under 6 NYCRR 212.9(b). Engineering calculations will be used as evidence of compliance under 6 NYCRR 212.9(b) with contaminant control efficiency when the measured flow rate falls below the lower limit of monitoring. Compliance with this monitoring requirement assures compliance with Subpart FFFF 63.2465(a) and 212.9(b) per the Pre-Compliance Report.

40CFR 63.2455(a), Subpart FFFF
Emission Unit: C-27018  Emission Point: 76001
A flow meter is used to monitor the water flow rate to the scrubber to ensure sufficient control efficiency. Engineering calculations will be used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring. Compliance
with this monitoring requirement assures compliance with 212.9(b) per the Pre-Compliance Report.

40CFR 63.2465(a), Subpart FFFF
Emission Unit: C-27018 Emission Point: 35017
The water flow to the scrubber is monitored to ensure the scrubber is operating at the required control efficiency. Engineering calculations will be used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring. Compliance with this monitoring requirement assures compliance with 212.9(b) per the Pre-Compliance Report.

40CFR 63.2465(a), Subpart FFFF
Emission Unit: C-27018 Emission Point: 27024
The scrubber temperature will be monitored to ensure the scrubber is operating at the required control efficiency. Engineering calculations will be used as evidence of compliance with control efficiency when the measured parameter exceeds the upper limit of monitoring. Compliance with this monitoring requirement assures compliance with 212.9(b) per the Pre-Compliance Report.

40CFR 63.2465(a), Subpart FFFF
Emission Unit: C-27035 Emission Point: 27035
The packed tower water scrubber flow is maintained at a minimum of 5 gpm to ensure 99% control efficiency for Part 212. Engineering calculations will be used as evidence of compliance with control efficiency when the measured flow rate falls below the lower limit of monitoring. Compliance with this monitoring requirement assures compliance with 212.9(b) per the Pre-Compliance Report.

40CFR 63.162(c), Subpart H
Emission Unit: C-27018
Process: 400 Emission Source: FUGTV
Each piece of equipment to which Subpart H applies shall be identified such that it can be distinguished readily from equipment that is not subject to Subpart H. This does not require physical tagging, but may be identified on a plant site plan, log entries, or by designation of process unit boundaries by some form of weatherproof identification.

40CFR 63.104, Subpart F
Emission Unit: C-27018
Process: 406 Emission Source: HXCWW
Delay of repair is allowed for heat exchanger system leaks in the following situations:
1) If the equipment that is isolated from the process, or
2) If the repair is technically infeasible without a shutdown, and one of the following is true:
   a) A shutdown is expected within two months after the delay of repair is determined to be necessary. Repair may be delayed until that shutdown.
   b) A shutdown is not expected within the next two months and a shutdown to repair the leaking equipment would result in greater emissions than delaying repair. In this case the owner/operator shall document the items listed in 63.104(e)(2)(i)(A) and (B) and delay the repair until the next shutdown.
   c) A shutdown is not expected within the next two months and the owner/operator does not determine that the shutdown would result in greater emissions than a delay of repair. The owner/operator may delay the repair for 120 days. The owner/operator shall demonstrate that the necessary parts or personnel were not available.

The owner/operator shall submit the following in the next semiannual report:
1) the presence of a leak and the date the leak was detected
2) whether the leak has been repaired
3) the reason(s) for the delay of repair
4) the expected date of repair if not repaired
5) the date of successful repair of the leak

40CFR 63.104, Subpart F
Emission Unit: C-27018
Process: 406      Emission Source: HXCWW
If a leak is detected, it shall be repaired as soon as practical but not later than 45 calendar days after the owner/operator is notified of the results indicating a leak. The owner/operator shall confirm the repair within 7 days of the repair or startup, whichever is later.

The owner/operator shall retain the following records:
- records of any leaks detected
- monitoring data indicating the presence of a leak
- date(s) of the leak's detection
- date(s) of efforts to repair leak(s)
- method and date of confirmation of leak(s)
