Cleanup Action Completed at Brownfield Site

Action has been completed to address the contamination related to the 291 Homer Street site ("site") located at 291 Homer Street, Olean, Cattaraugus County under New York State's Brownfield Cleanup Program. Please see the map for the site location.

The cleanup activities were performed by MJ Painting Contractor Corp. ("applicant(s)") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). The applicant(s) have submitted a draft Final Engineering Report for NYSDEC review which states that cleanup requirements have been or will be achieved to fully protect public health and the environment for the proposed site use.

Highlights of the Site Cleanup:

Cleanup activities were completed at the site between October 2015 and May 2016. The site cleanup included the:

- Excavation and off-site disposal of approximately 22,000 tons of soil/fill grossly contaminated with petroleum impacts. This grossly contaminated material contained elevated levels of polycyclic aromatic hydrocarbons (PAHs) and various metals.
Installation of sub-slab depressurization systems under the office space of the existing building and all new buildings.
Placement of a cover over the entire site to allow for commercial use. The cover consists of buildings, pavement, or one foot of soil meeting commercial use criteria.
Execution of an environmental easement for the property that restricts it to commercial or industrial use(s); and
Development of a Site Management Plan that identifies all use restrictions and engineering controls for the site and details the steps and media-specific requirements necessary to ensure the remedy remains in place and effective.

Next Steps

When NYSDEC approves the Final Engineering Report, it will be made available to the public (see "Where to Find Information" below). NYSDEC then will issue a Certificate of Completion which will be announced in a fact sheet that is sent to the site contact list.

The applicant(s) would be able to redevelop the site after receiving a Certificate of Completion. In addition, the applicant(s):

- would have no liability to the State for contamination at or coming from the site, subject to certain conditions; and
- would be eligible for tax credits to offset the costs of performing cleanup activities and for redevelopment of the site.

A Certificate of Completion may be modified or revoked if, for example, an applicant does not comply with the terms of its Brownfield Cleanup Agreement with NYSDEC.

Background

Location: The site is located at 291 Homer Street in the City of Olean. It is approximately 2.43 acres in size.

Site Features: The site is occupied by MJ Painting Contractor Corporation, a commercial and industrial painting contractor. There are three metal buildings currently on the site which includes offices, warehouse storage, and paint shops. All of the buildings are constructed on concrete piers with slab-on-grade foundations. Areas surrounding the buildings consist mainly of asphalt pavement/concrete and landscaped areas. Two Mile Creek, a small tributary of the Allegheny River, is approximately 200 feet to the east of the site.

Current Zoning and Land Use: The site formerly consisted of two tax parcels, 291 Homer Street and 299 Homer Street, both of which were zoned for industrial use. The parcels were combined into 291 Homer Street during remediation and the zoning remains for industrial use. The entire site is operated by MJ Painting Contractor Corporation for commercial painting operations.

Past Use of the Site: The site was owned by Vacuum Oil Company (predecessor of SOCONY-Vacuum Oil Company, Inc.) from 1913 until approximately 1954. The area in the vicinity of the site was used for industrial operations including, but not limited to, petroleum storage and refining, leather tanneries, heavy and light manufacturing, chrome plating, fertilizer manufacturing, and railroad facilities.

Site Geology and Hydrogeology: The site is essentially flat with no distinctive natural topographic features. The land slopes very gently to the southeast. The soil consists of fine-to-coarse sand, silt and gravel (with inclusions of ash, concrete, wood, brick, slag, etc.) to a depth of up to 19 feet below ground surface (bgs) underlain by a silty/clay layer. Areas subject to remedial excavations were backfilled with bank run gravel to the design grade.

The site is underlain by an upper and lower outwash aquifer, separated by a clay and silt layer. The upper aquifer ranges from 10 to 50 ft. thick and is locally confined by a clayey gravel surface layer. The lower aquifer averages 30 ft. thick and is semi-confined by the overlying silt and clay unit. The lower aquifer tends to be more permeable than the upper aquifer. The water table is located between 2 and 9 ft. bgs and groundwater generally flows to the southeast.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's website at:

<http://www.dec.ny.gov/cfm/xtapps/derexternal/haz/details.cfm?pageid=3&progno=C905042>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses include recreation, housing, business or other uses.

A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by DEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit: <http://www.dec.ny.gov/chemical/8450.html>

FOR MORE INFORMATION

Where to Find Information

Project documents are available at the following location(s) to help the public stay informed.

Olean Public Library
Attn: Lance Chaffee
134 N 2nd Street
Olean, NY 14760-2583
Phone: 716-372-0200
(lchaffee@oleanlibrary.org)

Who to Contact

Comments and questions are always welcome and should be directed as follows:

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.

Receive Site Fact Sheets by Email

Have site information such as this fact sheet sent right to your email inbox. NYSDEC invites you to sign up with one or more contaminated sites county email listservs available at the following web page: <http://www.dec.ny.gov/chemical/61092.html>. It's quick, it's free, and it will help keep you *better informed*.

As a listserv member, you will periodically receive site-related information/announcements for all contaminated sites in the county(ies) you select.

Note: Please disregard if you already have signed up and received this fact sheet electronically.
