## Acknowledgments

Responsive Management would like to thank Steven LaPan, Stephen Hurst, and Greg Kozlowski of the New York State Department of Environmental Conservation, Division of Fish and Wildlife, Bureau of Fisheries, for their input, support, and guidance on this project.

## EXECUTIVE SUMMARY

To help assess both the biological and human dimensions aspects of managing New York's freshwater fisheries, the New York State Department of Environmental Conservation's (DEC) Bureau of Fisheries (hereinafter referred to as the "Bureau") has contracted surveys of its licensed freshwater anglers approximately every 10 years starting in 1973. This survey was conducted in 2018 and addresses angler effort, expenditures, and attitudes for calendar year 2017 (hereinafter referred to as the "2017 survey").

The 2017 survey was conducted by Responsive Management both online and by mail. The online survey was the primary method for obtaining data, with a mail survey conducted to address any potential biases in the online survey sample. Note that the online survey was a closed survey, meaning only those specifically invited to take it could complete the survey. In addition, a telephone survey of non-responders to the online and mail surveys was conducted to assess any potential biases in the other methods.

The study's results are presented in four reports, with data presented in reports 1 through 3 and the survey and analysis methodology presented in the fourth report.

The survey questionnaire was developed cooperatively by Responsive Management and the Bureau, based in part on the previous mail surveys that the Bureau had conducted. Two questionnaires were developed for the 2017 survey: a paper copy for mail surveying, and an electronic version for online surveying. Responsive Management conducted pre-tests of the questionnaires to ensure proper wording, flow, and logic.

The Bureau provided a database of individuals who had a valid freshwater fishing license any time during the calendar year 2017. Note that the database was used solely for the survey; all personal identifying information was stripped from any data provided to the Bureau. Upon completion of the surveying effort, Responsive Management has not and will not use the database for any other purposes.

From this database, a sample of anglers was drawn. The sampling and contact plan was to attempt to contact those with a valid email address by email and send mail surveys only to those who did not have a valid email address. Both samples (the online and mail samples) were drawn from the license database so that the various license types were proportional to their actual representation in the database and the angler age structure in the sample matched the age structure of the license database.

## OVERALL SUMMARY

Freshwater anglers fished an estimated 19.899 million angler days in New York State's inland and Great Lakes waters in 2017, generating nearly $\$ 252$ million in at-location expenditures (e.g., bait, lodging, groceries, restaurants, guide services). An additional $\$ 204$ million was expended at home and en route from fishing destinations. Finally, fishing equipment expenditures totaled $\$ 1,814$ million. When direct, indirect, and induced economic effects of angler spending are taken into consideration, an estimated $\$ 2,138$ million of economic activity was generated and 10,961 jobs were supported in 2017 in New York. A substantial portion of
this economic activity was attributable to out-of-state anglers (\$564 million, which is $26 \%$ of the total).

## GENERAL ANGLER EFFORT

Anglers fished an estimated 19.899 million days in New York's fresh waters in 2017, including 894 thousand days of ice fishing ( $4 \%$ of the total). The mean number of days fished per angler was 29.04 (median 17 days).

ES Table 1 shows number of days fished in 2017 for major fish groupings, while ES Figure 1 shows the percentages of days fished by fish species groupings.

| ES Table 1. Estimated Number of Angler Days, by Species Group |  |  |
| :--- | ---: | ---: |
| Species Group | Estimated Days | Confidence Interval |
| Warmwater gamefish | $8,787,520$ | 163,123 |
| Coldwater gamefish | $5,448,281$ | 111,698 |
| Panfish | $2,255,530$ | 81,747 |
| Marine / anadromous | 286,059 | 29,937 |
| Carp | 176,119 | 30,332 |
| Nonspecific / unknown | $2,857,662$ | 81,939 |

## ES Figure 1. Percent of Days Fished by Fish Species Group

ES Table 2 and ES Figure 2 show a breakdown by waterbody types and subtypes for anglers fishing in New York in 2017. The three major groupings are Great Lakes waters, inland waters (making up the vast majority of days), and "unknown waters" (consisting of responses by anglers
who could not remember the specific waterbody but know that they fished for a certain amount of days, as well as those whose named waterbody could not be identified in the analysis).

| ES Table 2. Estimated Number of Angler Days, by Waterbody Type |  |  |
| :--- | ---: | ---: |
| Waterbody Type | Estimated Days | Confidence Limit |
| Inland Lakes and Ponds | $9,675,704$ | 178,135 |
| Inland Streams and Rivers | $5,018,531$ | 110,724 |
| Great Lakes (includes embayments) | $2,207,383$ | 99,454 |
| Great Lakes Tributaries (excluding the Niagara <br> River) | $1,175,775$ | 61,580 |
| Upper and Lower Niagara River (combined) | 419,271 | 40,225 |
| St. Lawrence River (includes embayments and <br> tributaries) | 568,257 | 40,259 |
| Nonspecific / Unknown | 834,178 | 75,537 |

## Percent of days by type of water.

ES Figure 2. Percent of Days Fished by Type of Water

Great Lakes angler effort is shown in ES Table 3 and ES Figure 3.

| ES Table 3. Estimated Number of Great Lakes Angler Days |  |  |
| :--- | ---: | ---: |
| Waterbody | Estimated Days | Confidence <br> Interval |
| Lake Erie and Embayments | 650,180 | 43,585 |
| Lake Erie Tributaries | 271,027 | 22,318 |
| Lake Erie Total | 921,207 | 48,809 |
| Upper Niagara | 270,725 | 36,290 |
| Lower Niagara | 148,546 | 17,452 |
| Niagara Total | 419,271 | 40,225 |
| Lake Ontario and Embayments | $1,557,203$ | 89,892 |
| Lake Ontario Tributaries | 900,370 | 57,561 |
| Lake Ontario Total | $2,457,573$ | 99,795 |
| St. Lawrence River and Embayments and Tributaries | 568,257 | 40,259 |

ES Figure 3. Percent of Days Fished Among Great Lakes Anglers
ES Table 4 and ES Figure 4 show the number and percentage of days fished, broken down by DEC administrative region in New York during 2017. In this table and graph, the data are for the region fished. In ES Table 5 and ES Figure 5, data are shown by region of residence. The leading
regions fished were Central New York, Eastern Adirondacks/Lake Champlain, the Western Finger Lakes, and Western New York.

| ES Table 4. Estimated Number of Angler Days, by NYSDEC Region Fished |  |  |
| :--- | ---: | ---: |
| Region | Estimated Days | Confidence <br> Interval |
| Region 1: Long Island | 420,469 | 35,216 |
| Region 2: New York City | 109,712 | 19,596 |
| Region 3: Lower Hudson Valley | $2,223,540$ | 80,834 |
| Region 4: Capital Region / Northern Catskills | $1,585,473$ | 73,013 |
| Region 5: Eastern Adirondacks / Lake Champlain | $3,240,954$ | 103,000 |
| Region 6: Western Adirondacks / Eastern Lake Ontario | $2,314,158$ | 97,530 |
| Region 7: Central New York | $3,280,452$ | 102,344 |
| Region 8: Western Finger Lakes | $2,958,913$ | 105,917 |
| Region 9: Western New York | $2,747,881$ | 86,645 |
| Region unknown | $1,017,546$ | 56,465 |

| Unknown | 4,990 | 3,833 |

## ES Figure 5. Percent of Days Fished by Region of Residence

## SPECIFIC USE

New York anglers spend the most days fishing for largemouth bass ( 3.54 million angler days) and smallmouth bass ( 2.70 million angler days). Three other species accounted for more than a million angler days each: brown trout ( 2.12 million angler days), walleye ( 1.62 million angler days), and yellow perch ( 1.06 million angler days).

ES Table 6 shows the top 25 waterbodies, ranked by the total estimated angler days. The top waterbodies fished are Lake Ontario, Lake Erie, Oneida Lake, the St. Lawrence River, and Lake Champlain-each with more than 400,000 angler days. Note that the estimated number of anglers on a given waterbody is not ranked in the same order, as some waterbodies may have more angler days while having fewer anglers, compared to another waterbody. For instance, Lake George has fewer anglers than the Salmon River, but it accounts for more angler days.

| ES Table 6. Estimated Number of Anglers and Angler Days, by Major Waterbodies |  |  |  |  |  |
| :---: | :--- | ---: | ---: | ---: | ---: |
| Rank | Waterbody | Estimated Days | Confidence <br> Interval | Estimated <br> Anglers | Confidence <br> Interval |
| 1 | Lake Ontario | $1,514,585$ | 89,510 | 114,888 | 5,318 |
| 2 | Lake Erie | 659,487 | 43,911 | 50,373 | 3,715 |
| 3 | Oneida Lake | 648,947 | 49,120 | 47,190 | 3,605 |

| 22 | Canandaigua Lake | 134,027 | 20,508 | 12,467 | 1,903 |
| 23 | Delaware River, Lower West Branch | 133,461 | 25,087 | 11,680 | 1,843 |
| 24 | Cattaraugus Creek | 123,245 | 14,414 | 15,397 | 2,110 |
| 25 | Beaver Kill | 120,813 | 14,569 | 17,205 | 2,227 |

## EXPENDITURES

Expenditures were categorized by location: those expenses at the fishing location, and those expenses that were incurred at home and on the way to and from the fishing location. ES Table 7 shows these expenditures by region of residence. Out-of-state anglers expended over $\$ 96.5$ million in New York State during 2017. ES Table 8 shows expenditures by region fished. The regions with the most at-location expenditures are the Eastern Adirondacks/Eastern Lake Ontario and Central New York.

ES Table 7. Estimated Expenditures by Region of Residence

| Region of <br> Residence | Amount Spent <br> at Location | Confidence <br> Interval | Amount Spent <br> at Home and <br> en Route | Confidence <br> Interval | Total | Confidence <br> Interval |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Region 1: Long <br> Island | $\$ 7,324,362$ | $\$ 973,596$ | $\$ 5,617,170$ | $\$ 1,220,347$ | $\$ 12,941,531$ | $\$ 1,681,316$ |
| Region 2: New <br> York City | $\$ 9,804,622$ | $\$ 1,253,813$ | $\$ 7,680,674$ | $\$ 1,015,430$ | $\$ 17,485,296$ | $\$ 1,910,000$ |
| Region 3: Lower <br> Hudson Valley | $\$ 20,834,443$ | $\$ 1,704,098$ | $\$ 16,479,132$ | $\$ 3,652,769$ | $\$ 37,313,575$ | $\$ 4,237,301$ |
| Region 4: Capital <br> Region / Northern <br> Catskills | $\$ 13,982,537$ | $\$ 1,320,566$ | $\$ 13,731,461$ | $\$ 863,581$ | $\$ 27,713,997$ | $\$ 1,882,758$ |
| Region 5: Eastern <br> Adirondacks / Lake <br> Champlain | $\$ 16,731,968$ | $\$ 1,344,424$ | $\$ 18,909,513$ | $\$ 1,455,764$ | $\$ 35,641,481$ | $\$ 2,530,168$ |
| Region 6: Western <br> Adirondacks / <br> Eastern Lake <br> Ontario | $\$ 11,193,594$ | $\$ 914,228$ | $\$ 9,879,630$ | $\$ 563,709$ | $\$ 21,073,224$ | $\$ 1,271,262$ |
| Region 7: Central <br> New York | $\$ 22,049,084$ | $\$ 1,591,996$ | $\$ 20,806,040$ | $\$ 1,355,075$ | $\$ 42,855,124$ | $\$ 2,395,452$ |
| Region 8: Western <br> Finger Lakes | $\$ 26,268,723$ | $\$ 1,593,501$ | $\$ 20,316,523$ | $\$ 1,260,065$ | $\$ 46,585,246$ | $\$ 2,399,646$ |
| Region 9: Western <br> New York | $\$ 27,158,742$ | $\$ 1,655,527$ | $\$ 22,558,862$ | $\$ 2,322,415$ | $\$ 49,717,604$ | $\$ 3,150,409$ |
| Out of state | $\$ 96,538,811$ | $\$ 4,053,827$ | $\$ 67,655,187$ | $\$ 7,034,897$ | $\$ 164,193,998$ | $\$ 8,820,882$ |
| Total | $\$ 251,938,829$ | $\$ 5,641,823$ | $\$ 203,666,853$ | $\$ 8,708,143$ | $\$ 455,605,683$ | $\$ 11,302,539$ |

"At Location" expenditures are those made by the anglers, regardless of whether they spent that money inside or out of their region of residence. In other words, anglers residing in Region 1 (Long Island) spent $\$ 7,324,362$ at their fishing location, including some locations outside of Region 1 itself. Note the total row includes a small percentage of anglers whose county of residence could not be positively identified and are listed in the database as residence unknown.

| ES Table 8. Estimated Expenditures by Region Fished |  |  |
| :--- | ---: | ---: |
| Region Fished | At Location Expenditures | Confidence Interval |
| Region 1: Long Island | $\$ 1,948,409$ | $\$ 336,147$ |
| Region 2: New York City | $\$ 203,643$ | $\$ 58,607$ |
| Region 3: Lower Hudson Valley | $\$ 18,324,383$ | $\$ 1,592,490$ |
| Region 4: Capital Region / Northern <br> Catskills | $\$ 19,308,691$ | $\$ 1,842,880$ |
| Region 5: Eastern Adirondacks / Lake <br> Champlain | $\$ 52,465,572$ | $\$ 2,956,565$ |
| Region 6: Western Adirondacks / Eastern <br> Lake Ontario | $\$ 34,035,834$ | $\$ 2,070,109$ |
| Region 7: Central New York | $\$ 48,700,691$ | $\$ 2,391,010$ |
| Region 8: Western Finger Lakes | $\$ 30,560,496$ | $\$ 1,978,856$ |
| Region 9: Western New York | $\$ 31,769,625$ | $\$ 1,966,433$ |

## INTRODUCTION

The management of New York's freshwater fisheries has both a biological aspect and a human dimensions aspect, requiring that the state know what its anglers' preferences and practices are. To this end, the New York State Department of Environmental Conservation's (DEC) Bureau of Fisheries (hereinafter referred to as the "Bureau") has contracted surveys of its licensed freshwater anglers approximately every 10 years starting in 1973. Prior to this latest survey, the survey was most recently conducted by the Human Dimensions Research Unit at Cornell University in 2007-2008 (Connelly and Brown 2009).

Prior surveys were conducted by mail in 1973, 1976-1977, 1988, 1996, and 2007-2008. All of the surveys prior to 2007-2008 were done as a single annual mailing (i.e., the survey asked about a calendar year, with one survey covering the entire year); the survey in 2007-2008 was conducted as a trimester recall survey, with three surveys spaced throughout the year in which respondents answered questions regarding the previous 3 - to 5 -month period. This was done to test whether this shorter recall time would be more accurate than the single-year survey. The 2007-2008 survey included a single-year survey, conducted by telephone, on a smaller sample to be compared with the trimester recall survey.

The conclusions of that report (Connelly and Brown 2009) were that there were very few statistically significant differences in the trimester recall survey compared to a single-year survey on the test variables. For instance, the report stated: "Estimates of fishing effort derived from the three-phase survey did not differ significantly very often from the 12 -month recall survey, and when differences occurred, no consistent pattern could be found." In light of the greater costs associated with a three-phase survey, which were deemed to outweigh the benefits, the Bureau decided to contract a single-year survey in 2018 about angler activity during calendar year 2017 (hereinafter referred to as the "2017 survey").

The 2017 survey was conducted both online and by mail. The online survey was the primary method for obtaining data, with a mail survey being conducted to address any potential bias in the online survey sample. Note that the online survey was a closed survey, meaning only those specifically invited to take it could complete the survey. In addition, a telephone survey of nonresponders to the online and mail surveys was conducted to help assess any potential biases in the other methods. The 2017 survey effort, which included online, mail, and telephone surveys, was conducted by Responsive Management. The study's results are presented in four reports, with data presented in reports 1 through 3 and the methods presented in the fourth report. This is Report 1, which concentrates on effort and expenditures. (Report 2 explores anglers' preferences and attitudes toward fishing and fisheries management, Report 3 shows results for each county, and Report 4 explains the full methodology.)

## SURVEYING METHODOLOGY

The overarching purpose of these ongoing surveys is to determine angler preferences, opinions, behaviors, spending, and travel. The study entailed a scientific multi-modal survey of licensed New York freshwater anglers. Specific aspects of the surveying methodology are detailed below. (More detailed information on the survey methodology is presented in the fourth report as part of this project, New York Angler Survey: Full Description of Methodology, Possible Biases, and Recommendations for Improving Future Surveys, Report 4 of 4.)

## Use of a Multi-Modal Survey

As mentioned previously, the survey combined a closed online survey of licensed anglers (closed means that only those identified and invited to take the survey could take it; a person surfing the Internet could not stumble across the survey and take it) with a mail survey of licensed anglers.

## Questionnaire Design

The survey questionnaire was developed cooperatively by Responsive Management and the Bureau, based partly on the previous mail surveys that the Bureau had contracted but including some new questions. Two questionnaires were developed for this 2017 survey: a paper copy for mail surveying (shown in the Appendix), and an electronic version for online surveying. Responsive Management conducted pre-tests of the questionnaires to ensure proper wording, flow, and logic in them.

## Survey Sampling

The survey goal was to obtain at least 10,250 completed questionnaires with resident and non-resident anglers who had purchased a fishing license valid at any time in 2017, including resident and non-resident 1-day, 7-day, and annual licenses, as well as lifetime, resident senior, and military licenses. The survey sampling plan called for approximately 8,200 questionnaires to be obtained from the closed online survey and approximately 2,050 to be obtained by postal mail. The sampling and contact procedures were to attempt to contact those with a valid email address by email and send mail surveys only to those who did not have a valid email address. Note that the plan was to give the full survey only to those anglers who had fished in 2017, 2016, and/or 2015, but the questionnaires of those who did not fish in any of those years were recorded to establish participation rates in fishing among various categories of license holders.

To start, the Bureau provided a database of individuals who had a freshwater fishing license valid for any time during the calendar year 2017 (this includes holders of any short-term licenses valid at any part of 2017 and annual license purchasers from January 1, 2016, through December 31, 2017-because annual licenses are valid 365 days from the date of purchase, all annual licenses purchased during that time were valid during part of the calendar year 2017). Note that the database was used solely for the survey; all personal identifying information was stripped from any data provided to the Bureau. Upon completion of the surveying effort, Responsive Management has not and will not use the database for any other purposes.

The database was first prepared for the samples to be drawn, one sample for email contact and another sample for postal mail contact. Responsive Management's initial task in preparing the database was to de-duplicate it. This is necessary because some people are in the database more
than once, typically because they have purchased more than one license. Duplicate anglers are taken out so that each data record is a unique individual.

This de-duplicated database was used to establish the age structure of holders of each license type; the database can be thought of as containing two pools: an online pool (license holders with a valid email addresses in the database) and a postal mail pool (those without a valid email address-note that all records included a postal mail address). In the next step, Responsive Management removed invalid email addresses (e.g., "noemail@noemail.com"); these anglers were put into the postal mail pool. Responsive Management then used the online survey vendor's automated pre-launch check, which identified additional invalid emails-these anglers were also put into the postal mail pool.

From the two pools in this database, an online sample and a postal mail sample of anglers were drawn. Each sample (the online sample and the mail sample) was pulled from the license database so that the various types of licenses were proportional to their actual representation in the database and the age structure within each license type in the sample matched the age structure of each license type in the license database.

## Contact Procedures

The email survey was sent on February 28 and March 1 (random halves sent on each date; not two emails to the same person). The Bureau also sent a separate email to assure potential respondents of the legitimacy of the survey; it was sent on March 6, 2018. Email reminders encouraging anglers to take the survey were then sent on March 8, March 22, and April 3, 2018, under the direction of Responsive Management (i.e., not sent by the Bureau).

The mail survey was postmarked on March 15, 2018. A follow-up mailing to 1,025 of those who had not responded (with the paper survey again enclosed) was postmarked on June 8, 2018.

The cutoff after which no new mail or online surveys would be accepted was August 31, 2018.

## Response Rates

The response rate is based on the number of completed questionnaires compared to the number of people in the survey of whom a contact was attempted. This calculation does not include invalid sample records that were removed in the development of the final sample, such as duplicate records of people already in the sample (which can happen when the same person is in the database twice because he or she held two licenses) or people who have no valid contact information. Nor does the response rate calculation include records in the sample that are determined to be invalid after the development of the final sample, such as those records for people who are no longer at the address or telephone number provided or who have died-these invalid records are revealed during the administration of the survey.

In the email sample, there were 43,514 contacts attempted that are considered valid email contacts. Responsive Management obtained 9,338 completed online questionnaires, resulting in a response rate of $21.5 \%$.

For the final postal mail sample considered in the response rate, there were 13,410 questionnaires mailed to valid contacts. In the mail portion of the survey, Responsive Management obtained 1,997 completed questionnaires, resulting in a response rate of $14.9 \%$.

## ANALYSIS OF THE DATA FROM THE SURVEYS

This section on data analysis discusses data format, weighting procedures, analysis of individual waterbodies named by survey respondents, the economic analysis of waterbodies, DEC administrative regions used in analyses, types of fish, and confidence intervals.

## Data Obtained From Surveys

All of the data were in the online survey vendor's format. The online respondents entered their responses directly during the survey. The mail survey questionnaires were returned to Responsive Management's office, and the responses were entered into the online version of the survey from the mail surveys by Responsive Management staff. Once all the data were obtained/entered, the online data were then imported directly into IBM SPSS Statistics for analyses.

## Data Weighting

The decision was made by the research team, in consultation with the Bureau, to weight all the data to the age, gender, and regional breakdown of the database from which the samples were pulled. The license database included the age, gender, and county of residence, and those data were appended to the survey data for each respondent. (Note that before any survey data were subsequently provided to the Bureau, all personal information that could link a survey respondent to a particular person was removed to ensure that all respondents were completely anonymous.)

## Procedures for the Analysis of Waterbodies Fished

In the survey, anglers were asked to name the waterbodies in which they fished in 2017 for up to a dozen waterbodies. Because of the vast number of possible waterbodies in the State of New York, drop-down lists were not considered (nor could they be used in the paper surveys). Therefore, the survey respondents wrote the name of the waterbodies in which they fished and the nearest village or county to identify their location. This procedure followed the prior survey that included the line for nearest village or county (in one field) to help identify the location. (Please see the fourth report of this project for a discussion of how to better obtain data on waterbodies and nearest location.)

Each entry was examined (there were approximately 26,000 such entries). If the waterbody could be easily determined, its spelling was normalized (lake erie, LAKE ERIE, and Lake erie would all be entered as "Lake Erie"). If the waterbody could not be determined initially, analysts examined the county/nearest village entry to help identify the waterbody, considering possible spelling variations as well that might show up when people are writing in the waterbodies in an open-ended question. For instance, "Willomoc Creek" near "roscoe" was identified in the final data as Willowemoc Creek in Sullivan County.

If a waterbody was listed with only part of the name that could apply to other waterbodies (e.g., if the entry was simply "Keuka," which could refer to Keuka Lake, Keuka Inlet, or Keuka

Outlet), DEC Regional Fisheries Managers were consulted to help determine the waterbody if possible. In cases where a waterbody did not have a unique name (e.g., Mill Pond) and could not be attributed to any of the waterbodies with that name, the waterbody was coded as "Mill Pond (unknown)," but trips could still be counted in the state total, even though the waterbody was not identified.

For each waterbody, analysts determined the actual waterbody (i.e., with normalized spelling), the county and the DEC region, and the type of waterbody. Each waterbody was classified as a river/stream or pond/lake, as well as whether it was an inland waterbody or a Great Lakes waterbody. The Great Lakes waterbodies category included the lakes themselves (including embayments) as well as rivers that feed into those lakes. This task was undertaken using a combination of Responsive Management and Bureau staff. The end result is a very useful database that includes a matrix of waterbodies and locations connected to other survey responses.

Each angler entered information about the waterbodies in which he or she fished and could enter up to 12 waterbodies. Each of these entries is a row of data; among the attributes in each of these rows of data are four attributes related to the waterbody in which the angler fished: the name of the waterbody, the county, the region, and the type of water (river/stream or lake/pond). All the possible scenarios regarding waterbody, county, region, and type are shown in Table 1.

Table 1. Waterbody Data Scenarios

| Waterbody | County | Region | Type | Notes |
| :--- | :--- | :--- | :--- | :--- |
| Known | Known | Known | Known | This is the perfect case. |
| Known | Unknown | Known | Known | This can occur when the county could not be identified <br> but the given waterbody was in only one region |
| Known | Unknown | Unknown | Known | This can occur when the waterbody is known, the <br> county could not be identified, and the waterbody <br> spans more than one county and more than one region. |
| Unknown | Known | Known | Known | This can occur when the waterbody could not be <br> identified, the county could be identified, and the <br> waterbody type was indicated in the name. |
| Unknown | Known | Known | Unknown | This can occur when the waterbody and its type could <br> not be identified, but the county could. |
| Unknown | Unknown | Unknown | Known | This can occur when only the type was identifiable in <br> the name but the waterbody and county could not be <br> identified. |
| Unknown | Unknown | Unknown | Unknown | In these cases, the trip days, type of fish, and spending <br> could be counted in state totals, but not in any region <br> or type of water. |

Because of the unknown fields, no single column above will sum to the total. For instance, the sum of days for all the known waterbodies will be less than the total days, the sum of days for all counties will be less than the total days, and so forth. Tables may have totals that have apparent slight discrepancies with other tables because of these unknown fields, as well.

Fresh waters in the state were also categorized as being inland or Great Lakes-related. In these reports "Great Lakes" waters were defined as Lake Erie and its embayments, the Niagara River, Lake Ontario and its embayments, and the portions of major Lake Erie and Lake Ontario tributaries in the county closest to the lake (below the first barrier impassable to fish), as well as the St. Lawrence River and its embayment and tributaries. This categorization was possible only
when the name of the waterbody was known, as well as the county for some waterbodies. Note that this survey and the analysis of data used a more detailed breakdown of the Great Lakes than did prior reports contracted by the Bureau.

Specifically, in the analysis of the Great Lakes waters, the following lists were used:

Lake Erie Embayments<br>Dunkirk Harbor<br>Barcelona Harbor<br>Buffalo Harbor<br>\section*{Lake Erie Tributaries}<br>Big Sister Creek<br>Buffalo Creek<br>Buffalo River<br>Canadaway Creek<br>Cattaraugus Creek (only the portion in Chautauqua, or Erie Counties)<br>Cayuga Creek<br>Cazenovia Creek<br>Chautauqua Creek<br>Clear Creek (Erie County; tributary to Cattaraugus Creek)<br>Delaware Creek<br>Eighteen Mile Creek (Erie County)<br>Silver Creek<br>Smokes Creek<br>Walnut Creek

## Lake Ontario Embayments

Black River Bay
Blind Sodus Bay (Wayne County)
Braddock Bay
Buck Pond
Chaumont Bay
Cranberry Pond
East Bay (Wayne County)
Henderson Harbor
Irondequoit Bay
Little Sodus Bay
Long Pond
Maxwell Bay
Mexico Bay
Port Bay
Sandy Pond
Sodus Bay

## Lake Ontario Tributaries

Bear Creek (Wayne County)
Black River (Village of Dexter; Jefferson County)
Deer Creek (Oswego County)
Eighteen Mile Creek (Niagara County)
Four Mile Creek (Monroe County)
Genesee River (only the portion in Monroe County/City of Rochester)
Grindstone Creek
Irondequoit Creek
Johnson Creek
Keg Creek
Little Salmon River
Little Sandy Creek
Marsh Creek (Orleans County)
Maxwell Creek
Mill Creek (Jefferson County)
Mill Creek (Monroe County)
Ninemile Creek (Oswego County)
Oak Orchard Creek (only the portion in Orleans County)
Orwell Brook
Oswego River (only the portion at the City of Oswego)
Salmon Creek (the one in Monroe County)
Salmon River
Sandy Creek (AKA "North Sandy" - Jefferson County)
Sandy Creek (Monroe County)
South Sandy Creek
Sterling Creek
Stony Creek
Twelvemile Creek (Niagara County)
St. Lawrence Embayments and Tributaries
Brandy Brook
Chippewa Bay
Coles Creek
Eel Bay
Goose Bay
Lake of the Isles
Oswegatchie River (City of Ogdensburg only; St. Lawrence County)
Raquette River (City of Massena only; St. Lawrence County)

## Economic Impact

The data analyses included an estimation of the economic impact of anglers' activities at the top 50 waterbodies.

To estimate the size of the economic contributions made by anglers, this analysis used economic data and software called IMPLAN. The IMPLAN model uses publicly available economic data to calculate several economic multipliers and uses them to estimate and break down the total impact of fishing activity into three separate effects:

1. Direct effects.
2. Indirect effects.
3. Induced effects.

The direct effects result from the home-based and location-specific spending by anglers on each fishing trip. Direct effects represent the money spent by individuals, businesses, and other institutions for the various products used for fishing recreation. The first-round money includes expenditures for items such as fishing tackle, camping equipment, lodging, groceries, and restaurants.

Indirect effects represent subsequent rounds of money spent among local businesses based on the direct effects. Subsequent rounds of money (or indirect effects) include the impact of local industries buying goods and services from other local industries. These purchases are also known as intermediate expenditures.

The last effect, the induced effect, includes all money spent by the employees who receive salaries and benefits from jobs created by angler expenditures and local businesses on purchases such as those from retail clothing stores, restaurants, and other local businesses. Breaking out and examining the two types of secondary effects (indirect and induced effects) helps illustrate the types of economic relationships in a large economy. For example, industries that are more labor-intensive will tend to have larger induced effects and smaller indirect effects. In addition, industries that tend to pay higher wages and salaries will also tend to have larger induced effects. Decomposing the multiplier into its induced and indirect effects can provide a better understanding of the industry under examination and its relationship to the larger economy.

Note that expenditures on equipment include rods, reels, lines, leaders, lures, baits, tackle boxes, creels, and so forth, as well as specialized clothing, guidebooks, and camping gear used for fishing. The equipment expenditures also include large items such as boats and vehicles (if used for fishing), as well as cabins, again if used primarily for fishing. These equipment expenditures - most of which were likely bought at home rather than on a fishing trip-were also included in the total economic effects.

## Regions

Addition analyses were conducted at the DEC administrative regional level, as shown in Figure 1.

Figure 1. NYSDEC Regions

## Types of Fish

In the study, fish species groupings were used as shown in Table 2. These are the same groupings as were used in DEC's 2007 survey (Connelly and Brown 2009), with the exception of shad. The Hudson River shad fishery in New York was closed during 2017.

| Table 2. Species Groupings as Defined for This <br> Report |
| :--- |
| Warmwater gamefish |
| Black bass (smallmouth or largemouth) |
| Muskie |
| Northern pike |
| Pickerel |
| Tiger muskie |
| Walleye |
| Coldwater gamefish |
| Coho/Chinook salmon |
| Lake trout |
| Landlocked Atlantic salmon |
| Steelhead trout |
| Trout (brook, brown, rainbow) |
| Panfish |
| Bluegill/sunfish |
| Bullheads, catfish |
| Crappie (calico bass) |
| Yellow perch |
| Marine/anadromous |
| Striped bass |
| Carp |

## Confidence Intervals

All confidence intervals in the tables are reported at the $95 \%$ confidence level.

## GENERAL ANGLER EFFORT

Anglers fished an estimated total of 19,899,099 days in fresh waters in New York in 2017. (Any part of a day is defined as 1 day of fishing in the survey.) The mean number of days fished per angler was 29.04 , and the median was 17 days. The mean is so much higher than the median because of some avid anglers who went fishing many days. The total days include 894,301 days of ice fishing ( $4 \%$ of the total days, but $5 \%$ of days known to be either open or ice-a small percentage of days could not be classified as either open or ice).

Table 3 shows number of days fished in 2017 for major fish groupings, while Figure 2 shows the data graphically. Warmwater gamefish led the list, with nearly 9 million days in 2017. Note that carp has a high confidence interval relative to its estimated days. Figure 3 shows the percentages of the fish species groupings.

| Table 3. Estimated Number of Angler Days, by Species Group |  |  |
| :--- | ---: | ---: |
| Species Group | Estimated Days | Confidence Interval |
| Warmwater gamefish | $8,787,520$ | 163,123 |
| Coldwater gamefish | $5,448,281$ | 111,698 |
| Panfish | $2,255,530$ | 81,747 |
| Marine / anadromous | 286,059 | 29,937 |
| Carp | 176,119 | 30,332 |
| Nonspecific / unknown | $2,857,662$ | 81,939 |

Days fishing by fish species group in New York in 2017.

Figure 2. Number of Days Fished by Fish Species Group

Figure 3. Percent of Days Fished by Fish Species Group
Table 4 and Figure 4 show a breakdown by waterbody types and subtypes for anglers fishing in New York in 2017. The three major groupings are Great Lakes waters, inland waters (making up the vast majority of days), and unknown waters (this type consisting of responses by respondents who could not remember the specific waterbody but know that they fished for a certain amount of days, as well as those whose named waterbody could not be identified by the analysts).

| Table 4. Estimated Number of Angler Days, by Waterbody Type |  |  |
| :--- | ---: | ---: |
| Waterbody Type | Estimated Days | Confidence Limit |
| Inland Lakes and Ponds | $9,675,704$ | 178,135 |
| Inland Streams and Rivers | $5,018,531$ | 110,724 |
| Great Lakes (includes embayments) | $2,207,383$ | 99,454 |
| Great Lakes Tributaries (excluding the Niagara <br> River) | $1,175,775$ | 61,580 |
| Upper and Lower Niagara River (combined) | 419,271 | 40,225 |
| St. Lawrence River (includes embayments and <br> tributaries) | 568,257 | 40,259 |
| Nonspecific / Unknown | 834,178 | 75,537 |

Figure 4. Percent of Days Fished by Type of Water

Table 5 and Figure 5 show days fished in inland versus Great Lakes waters as a whole in 2017. Table 6 breaks down the Great Lakes waters. The pie graph matching the data from Table 6 is shown in Figure 6; the division between Lakes Erie and Ontario is shown in Figure 7.

| Table 5. Estimated Number of Angler Days for Inland and Great Lakes Waters |  |  |
| :--- | ---: | ---: |
| Waterbody Type | Estimated Days | Confidence Limit |
| Inland Waters | $* 15,084,250$ | 198,328 |
| Great Lakes Waters | $4,370,686$ | 127,972 |

*Is more than the sum of inland waters in Table 4 because it includes waters known to be inland but otherwise unclassifiable regarding type of inland water.

Figure 5. Percent of Days Fished by Great Lakes Versus Inland Waters

| Table 6. Estimated Number of Great Lakes Angler Days |  |  |
| :--- | ---: | ---: |
| Waterbody | Estimated Days | Confidence <br> Interval |
| Lake Erie and Embayments | 650,180 | 43,585 |
| Lake Erie Tributaries | 271,027 | 22,318 |
| Lake Erie Total | 921,207 | 48,809 |
| Upper Niagara | 270,725 | 36,290 |
| Lower Niagara | 148,546 | 17,452 |
| Niagara Total | 419,271 | 40,225 |
| Lake Ontario and Embayments | $1,557,203$ | 89,892 |
| Lake Ontario Tributaries | 900,370 | 57,561 |
| Lake Ontario Total | $2,457,573$ | 99,795 |
| St. Lawrence River and Embayments and Tributaries | 568,257 | 40,259 |

This table sums to slightly less than the Great Lakes total in Table 5 because that table included some waters known to be Great Lakes waters but that could not be classified between the particular Great Lake and so are not in this table; this includes some anglers who fished Eighteenmile Creek but did not know which one and could not otherwise be categorized. Furthermore, the sum of the two Great Lakes tributaries rows is less than the total Great Lakes tributaries in Table 4 because of this same reason.

Figure 6. Percent of Days Fished Among Great Lakes Anglers

Figure 7. Division of Great Lakes Angler Days by Lake Erie or Lake Ontario

Table 7 and Figure 8 show the number and percentage of days fished by DEC region during 2017. In this table and graph, the data are for the region fished. In Table 8 and Figure 9, data are shown by region of residence.

| Table 7. Estimated Number of Angler Days, by NYSDEC Region Fished |  |  |
| :--- | ---: | ---: |
| Region | Estimated Days | Confidence <br> Interval |
| Region 1: Long Island | 420,469 | 35,216 |
| Region 2: New York City | 109,712 | 19,596 |
| Region 3: Lower Hudson Valley | $2,223,540$ | 80,834 |
| Region 4: Capital Region / Northern Catskills | $1,585,473$ | 73,013 |
| Region 5: Eastern Adirondacks / Lake Champlain | $3,240,954$ | 103,000 |
| Region 6: Western Adirondacks / Eastern Lake Ontario | $2,314,158$ | 97,530 |
| Region 7: Central New York | $3,280,452$ | 102,344 |
| Region 8: Western Finger Lakes | $2,958,913$ | 105,917 |
| Region 9: Western New York | $2,747,881$ | 86,645 |
| Region unknown | $1,017,546$ | 56,465 |

Figure 9. Percent of Days Fished by Region of Residence

## SPECIFIC USE

Table 9 (shown on three pages) shows the number of days anglers spent fishing for each given species by the given method in 2017, as well as type of waterbody. It also includes the total days by species. In the survey, anglers were asked to name the primary species targeted, in cases where they could have fished for multiple species in the same waters at the same time. Figure 10 shows total days by fish species.

| Table 9. Estimated Number of Angler |  |  |
| :---: | :---: | :---: |
| Species | Estimated Days | Confidence Interval |
| Bass, largemouth (from shore) | 1,645,884 | 71,344 |
| Bass, largemouth (from a boat) | 1,879,396 | 74,777 |
| Bass, largemouth (ice fishing) | 12,670 | 3,151 |
| Bass, largemouth (lake/pond) | 2,981,256 | 100,313 |

Figure 10. Total Days Fished in New York by Fish Species

Tables 10 through 23 show days fished for various species in each region (and the data for those whose region could not be determined). For regions that have Great Lakes waters (Regions 6 through 9), the tables include total days for each species and then days for each species categorized by Great Lakes and inland waters; the tables for these regions span two pages each.

| Table 10. Estimated Number of Angler Days, by Individual Species, Fished in Region 1: Long Island |  |  |
| :--- | ---: | ---: |
| Species | Estimated Days | Confidence Interval |
| Bass, largemouth | 187,105 | 25,480 |
| Bass, smallmouth | 8,465 | 3,107 |
| Bass, striped (freshwater only) | 9,951 | 5,124 |
| Bullhead | 592 | 635 |
| Carp | 7,422 | 2,905 |
| Catfish, channel | 573 | 454 |
| Crappie / calico bass | 667 | 555 |
| Muskie | 0 | NA |
| Northern pike | 0 | NA |
| Perch, yellow | 7,747 | 3,314 |
| Pickerel | 13,980 | 5,745 |
| Salmon, coho / Chinook | 0 | NA |
| Salmon, landlocked Atlantic | 0 | NA |
| Steelhead | 0 | NA |
| Sunfish (bluegill, pumpkinseed, redbreast, rock bass) | 17,609 | 6,219 |
| Tiger muskellunge | 0 | NA |
| Trout, brook | 19,797 | 7,277 |
| Trout, brown | 32,797 | 8,092 |
| Trout, lake | 0 | NA |
| Trout, rainbow | 31,206 | 8,110 |
| Walleye | 5,138 | 2,563 |
| No specific preferred type | 56,028 | 14,763 |

| Table 11. Estimated Number of Angler Days, by Individual Species, Fished in Region 2: New York City |  |  |
| :--- | ---: | ---: |
| Species | Estimated Days | Confidence Interval |
| Bass, largemouth | 59,279 | 16,907 |
| Bass, smallmouth | 1,147 | 549 |
| Bass, striped (freshwater only) | 5,687 | 3,137 |
| Bullhead | 1,189 | 1,183 |
| Carp | 5,644 | 3,174 |
| Catfish, channel | 2,813 | 2,305 |
| Crappie / calico bass | 888 | 1,328 |
| Muskie | 0 | NA |
| Northern pike | 0 | NA |
| Perch, yellow | 608 | 790 |
| Pickerel | 449 | 460 |
| Salmon, coho / Chinook | 0 | NA |
| Salmon, landlocked Atlantic | 0 | NA |
| Steelhead | 0 | NA |
| Sunfish (bluegill, pumpkinseed, redbreast, rock bass) | 8,406 | 3,712 |
| Tiger muskellunge | 0 | NA |
| Trout, brook | 0 | NA |
| Trout, brown | 0 | NA |
| Trout, lake | 0 | NA |
| Trout, rainbow | 0 | NA |
| Walleye | 0 | NA |
| No specific preferred type | 18,807 | 6,678 |

| Table 12. <br> Valley | Cstimated Number of Angler Days, by Individual Species, Fished in Region 3: Lower Hudson |  |
| :--- | ---: | ---: |
| Species | Estimated Days | Confidence Interval |
| Bass, largemouth | 581,073 | 45,761 |
| Bass, smallmouth | 195,426 | 21,483 |
| Bass, striped (freshwater only) | 148,545 | 23,204 |
| Bullhead | 3,712 | 1,589 |
| Carp | 15,282 | 5,175 |
| Catfish, channel | 19,055 | 8,241 |
| Crappie / calico bass | 39,664 | 10,393 |
| Muskie | 4,069 | 3,724 |
| Northern pike | 1,086 | 1,503 |
| Perch, yellow | 34,609 | 11,235 |
| Pickerel | 15,727 | 4,006 |
| Salmon, coho / Chinook | 0 | NA |
| Salmon, landlocked Atlantic | 468 | 556 |
| Steelhead | 0 | NA |
| Sunfish (bluegill, pumpkinseed, redbreast, rock bass) | 61,767 | 13,359 |
| Tiger muskellunge | 589 | 354 |

Figure 11. Percentages of Days in Great Lakes and Inland Waters

Table 25 presents a breakdown of days fished by ice fishing versus open waters for each DEC region (this table excludes the small number of days that could not be classified as either ice or open). Figure 12 shows the breakdown statewide (of days known to be either ice or open), and Figure 13 shows the percentage breakdown for each region.

| Region and Type of Fishing | Estimated Days | Confidence Interval |
| :---: | :---: | :---: |
| Statewide |  |  |
| Ice fishing | 894,301 | 38,832 |
| Open waters | 18,328,217 | 217,502 |
| Region 1: Long Island |  |  |
| Ice fishing | 2,167 | 839 |
| Open waters | 418,303 | 35,003 |
| Region 2: New York City |  |  |
| Ice fishing | 0 | NA |
| Open waters | 109,712 | 19,596 |
| Region 3: Lower Hudson Valley |  |  |
| Ice fishing | 45,536 | 5,868 |
| Open waters | 2,178,004 | 79,833 |
| Region 4: Capital Region / Northern Catskills |  |  |
| Ice fishing | 57,517 | 7,777 |
| Open waters | 1,527,956 | 71,364 |
| Region 5: Eastern Adirondacks / Lake Champlain |  |  |
| Ice fishing | 237,262 | 16,281 |
| Open waters | 3,003,692 | 98,307 |

Figure 22. Percentages of Days Fished Among In-Region Anglers and Out-of-Region Anglers, Region 9

Table 35 shows estimated days fishing in each of the 80 waterbodies with the highest number of angler days. For the top 50 waterbodies in this table, detailed data are presented further on in the report.

| Rank | Waterbody | Estimated Days | Confidence Interval | Estimated Anglers | Confidence Interval |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Lake Ontario | 1,514,585 | 89,510 | 114,888 | 5,318 |
| 2 | Lake Erie | 659,487 | 43,911 | 50,373 | 3,715 |
| 3 | Oneida Lake | 648,947 | 49,120 | 47,190 | 3,605 |

| 80 | Cranberry Lake (St. Lawrence County) | 41,220 | 9,897 | 4,105 | 1,099 |
|  |  |  |  |  |  |

For each of the top 50 waterbodies in Table 35, data are shown in Tables 36 through 335 for the region of residence of the anglers fishing it, the breakdown of ice and open-water fishing in the waterbody, the estimated expenditures by anglers at the waterbody and at home/en route, the top species in that waterbody, the mean distance traveled, the satisfaction level for that waterbody, the economic impact of anglers who fish the waterbody, and the tax revenues generated by anglers fishing at the waterbody. The waterbodies are presented ranked by the number of angler days.

In these tables, the sum of the number of days from anglers in all of the regions and from out of state will not exactly match the total number of days because of a small number of days among anglers who could not be identified as residing in a particular region. In some cases, the sum of ice days and open days is slightly less than the total days because some days could not be identified as ice or open; these instances are marked with an asterisk and a note under the table.

| Table 36. Lake Ontario-Effort | Estimated Days | Confidence Interval |
| :--- | ---: | ---: |
| Region of Residence and Type of Fishing | 4,323 | 3,457 |
| Region of Residence | 4,769 | 3,355 |

## EXPENDITURES

Freshwater anglers generated nearly $\$ 252$ million in at-location expenditures (e.g., bait, lodging, groceries, restaurants, guide services). An additional $\$ 204$ million was expended at home and en route from fishing destinations. Finally, fishing equipment expenditures totaled $\$ 1,814$ million. When direct, indirect, and induced economic effects of angler spending are taken into consideration, an estimated $\$ 2,138$ million of economic activity was generated and 10,961 jobs were supported in 2017 in New York. A substantial portion of this economic activity was attributable to out-of-state anglers ( $\$ 564$ million, which is $26 \%$ of the total). Table 336 shows non-equipment expenditures by region of residence. Table 337 shows non-equipment expenditures by region fished. Table 338 shows non-equipment expenditures by type of waterbody.

"At Location" expenditures are those made by the anglers, regardless of whether they spent that money inside or out of their region of residence. In other words, anglers residing in Region 1 (Long Island) spent $\$ 7,324,362$ at their fishing location, including some locations outside of Region 1 itself. Note the total row includes a small percentage of anglers whose county of residence could not be positively identified and are listed in the database as residence unknown.

| Table 337. Estimated Expenditures by Region Fished |  |  |
| :--- | ---: | ---: |
| Region Fished | At Location Expenditures | Confidence Interval |
| Region 1: Long Island | $\$ 1,948,409$ | $\$ 336,147$ |
| Region 2: New York City | $\$ 203,643$ | $\$ 58,607$ |

Tables 339 through 347 show expenditures by anglers fishing in each region based on their region of residence. A notation at the bottom of each of these tables shows the percent of expenditures in the region by non-region anglers. Regions $4,5,6$, and 7 have the highest percentage of non-region angler expenditures.

| Region of Residence | At Location Expenditures | Confidence Interval |
| :---: | :---: | :---: |
| Region of Residence |  |  |
| Region 1: Long Island | \$1,531,725 | \$303,678 |

Table 348 shows the economic impact statewide of the equipment, at location, and en route expenditures. In this statewide table, "county resident anglers" refers to anglers fishing within their own county of residence, while "state resident (non-county) anglers" refers to anglers fishing outside of their own county of residence. Table 349 shows the taxes generated from anglers' spending.

## APPENDIX: PAPER VERSION OF SURVEY QUESTIONNAIRE

## NEW YORK STATE FRESHWATER ANGLER SURVEY

If preferred, this survey may be completed online at Mww-fighingaursey.org, using ACCESS CODE: 123456
Q1. In the past 5 jears, have you purchased or held (e.g. lifetime or free license) a fishing license and/or fished in New York State? (Please check all that apply for each jear listed below.)

| Year | Purchased/Held License | Fished | IP YOU DID NOT FISH IN NEW YORK |
| :---: | :---: | :---: | :---: |
| 2017 | $\bigcirc$ | $\bigcirc$ | STATE IN 2017, 2016, OR 2015, PLEASE |
| 2016 | $\bigcirc$ | $\bigcirc$ | STOP AFTER Q1 AND RETURN THIS |
| 2015 | $\bigcirc$ | $\bigcirc$ | QUESTIONNAIRE USING THE |
| 2014 | $\bigcirc$ | $\bigcirc$ | PROVIDED POSTAGE-PAID ENVELOPE. |
| 2013 | $\bigcirc$ | $\bigcirc$ | OTHERWISE, CONTINUE THE SURVEY. |

Q2. Rank your 5 favorite species of fish you prefer to fish for in New York State. Please rank them from 1 to 5 , with \#1 as
your favorite; leave all the rest of the species blank.
For each of your 5 favonite species, mark the waterbody type that you prefer to fish in for that species. Please mark only one
preferred waterbody type for each of the fish species.
(If you have no preferred fish, mank "No specific preferred type," mark a preferred waterbody, and leave all other rows blank

| Species | Fish species preference (ranking) | Preferred Waterbody Type |  |  |  |  |

Q3. Please choose up to 2 favorite ways that you like to
fish. (Please rank only 2 ways, with \#1 as your favorite; leave the rest blank.)

| Rank |  |
| :--- | :--- |
|  | From shore |
|  | From a fishing pier |
|  | Wading in streams |
|  | Through the ice |
|  | From a motorized boat |
|  | From a non-motorized boat/watercraft |

Q4. Did you sell any of the yellow perch, pumpkinseed, bluegill, or redbreast that you caught in 2017?
OYes
O No (caught these types of fish but did not sell)
O No (did not catch these types of fish)

Q6. How much did you spend on the following fishing-related equipment, gear, and clothing in 2017 ? (Please write in the amount in whole dollars; include only payments made in 2017 for large equipment that was financed, and include only items that were ased primarib for fisbing.) (If unsure, please estimate as best you can.) (Note that other non-equipment-related
expenses will be asked about on the following page.)

| Item( $)^{\text {( }}$ | $\begin{array}{\|c\|} \hline \text { Amount spent on } \\ \text { item( } \varepsilon \text { ) in } 2017 \\ \text { (round to nearest dollar) } \end{array}$ |
| :---: | :---: |
| Rods, reels, poles, rod making components |  |
| Lines, leaders |  |
| Artificial lures, flies, baits, dressing for flies or lines, hooks, sinkers, swivels, fip-tring equipment and supplies |  |
| Tackle boses, minnow traps, seines, bait containers |  |
| Creels, stringers, fish bags, landing nets, gaff hooks |  |
| Depth finders, fish finders, GPS units, radar, marine radios and other electronic devices |  |
| Ice fishing equipment (tips-ups, ice fishing houses, ice augers, etc.) |  |
| Scales, knives, hook disgorgers, planer boards, downriggers, rod holders |  |
| Fishing vests, clothing, waders, wading boots, foul weather gear, life jackets |  |
| Taxidermy costs |  |
| Books, apps, magazines, maps, or DVDs devoted to fishing |  |
| Camping equipment (tents, sleeping bags, cook stoves, lanterns) used primarily for fishing |  |
| Boats/canoes/kayaks (used primarily for fishing), boat trailers, car or truck boat racks, trailer hitch |  |
| Boat motors (if boat used primarily for fishing) |  |
| Pickup truck, camper, motor home, recreational vehicle (RV) (if used primarily for fishing) |  |
| ATV/4-wheeler (if used primarily for fishing) |  |
| Freezer (if used primarily for caught fish) |  |
| Cabin/camp (if used primarily for fishing) |  |

Q7. Please answer the questions below about all of your freshwater fishing trips IN NEW YORK STATE between JANUARY 1 and DECEMIBER 31, 2017.
You can list up to 12 locations using the tables below and also right (pages 3 and 4). (Include only the fishing you personally did and the dollars you personally spent. A partial day of fishing is considered one full day.)
Please be as specific as possible with names so that lakes are not confused with streams (eg., if fishing in Oneida Lake, enter "Oneida Lake" rather than just "Oneida" so that it is not confused with Oneida River).

|  |  |  |  |  | How much were your <br> travel-related expenses* <br> to fish at this waterbody? |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

TTravel-related expenses include such things as food and drinks, lodging, transportation, tolls, fuel, boat lunuch fees, guide fees, bait, ice,
boat rentals. Do not include equipment expenses already listed on the previous page. boat rentals. Do not include equipment expenses already listed on the previous page.

The table for Q7 continues on the following page. (If you have no more waterbodies to complete the table for Q7, please continue to Q8 $^{8}$ by turning this survey booklet to the back to page 5.)

Q8. Have you used any of the following live baits
when fishing in New York in the past 5 years?
(Please check all that apply.)
$\square$ Personally collected baitfish (ie., live fish)

- Purchased live baitfish
$\square$ Crayfish
- Aquatic insects

None of these

O Don't use baitfish/crayfish
O Dump in trash
O Dump in water where I am fishing
O Dump on dry land
O Keep for next trip
$O$ Give to another angler
Other: $\qquad$

Q9. How do you most frequently dispose of baitfish/
crayfish? (Or indicate that you do not use baitfish/crayfish.)

Q10. Scientific literature shows that angler over-harvest can and does affect yellow perch populations and pumpkinseed, bluegill, and redbreast sunfish populations, as well as sportfishing quality, with the tendency being to remove more of the larger, older fish. In 1996, DEC placed daily take limits of 50 yellow perch and 50 pumpkinseed, bluegill, and redbreast sunfish for most of the State's waters to conserve these species.
What effect do you think the sale of angler-caught yellow perch and pumpkinseed, bluegill, and redbreast sunfish in New York has on these fisheries? (Please check one effect for each species.)

|  | Is very harmful <br> to the fishery | Is somewhat harmful <br> to the fishery | Is somewhat <br> beneficial <br> to the fishery | Is very beneficial <br> to the fishery |
| :---: | :---: | :---: | :---: | :---: |
| Yellow perch | $O$ | $O$ | $O$ | $O$ |
| Pumphinseed, bluegill, <br> and redbreast sunfish | $O$ | $O$ | $O$ | $O$ |

Q11. Please rank the $\mathbf{2}$ actions that would encourage you to increase your fishing activity.
(Please rank only 2, with \#1 being the action most likely to increase your fishing activity, leave the rest blank.)

| Rank (Top 2 only) | Action |
| :--- | :--- |
|  | Provide better information on where to fish. |
|  | Increase the number of locations to launch a motorboat. |
|  | Increase the number of locations to launch non-motorized boat/watercraft. |
|  | Increase the number of locations for fishing from the shore. |
|  | Increase the number of locations for fishing from a fishing pier. |
|  | Provide additional information on current fishing opportunities/conditions. |
|  | Provide better/more information on how to fish for certain species. |
|  | Provide fishing opportunities closer to where you live. |
|  | Simplify the State's fishing regulations. |

## Background Information

What is jour current age? $\qquad$ years Are you...? O Male O Female

Q12. Please indicate how often you harvest the species listed below if they are of legal size. (If you do not fish for the species, leave the row blank.)

|  | Always | Frequently | Occasionally | Never |
| :---: | :---: | :---: | :---: | :---: |
| Smallmouth bass | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Largemouth bass | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Bullhead | 0 | 0 | $\bigcirc$ | $\bigcirc$ |
| Carp | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Channel catfish | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Crappie / calico bass | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Coho / Chinook salmon | $\bigcirc$ | 0 | $\bigcirc$ | $\bigcirc$ |
| Landlocked Atlantic salmon | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Lake trout | $\bigcirc$ | 0 | $\bigcirc$ | $\bigcirc$ |
| Muskie | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

| Pickerel | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Steelhead | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Striped bass (freshwater only) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Sunfish (bluegill, pumpkinseed, redbreast, rock bass) | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Tiger muskellunge | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Brook trout | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Brown trout | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Rainbow trout | 0 | 0 | $\bigcirc$ | $\bigcirc$ |
| Walleye | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Yellow perch | 0 | $\bigcirc$ | $\bigcirc$ | 0 |

Q13. On what waters in New York State (that currenty bave pwblic access) do you desire to have improved public access? (Please provide names of waterbody, county, and nearest town or village.)

Q14. What New York State waters that dio NOI currenty bave pwbirc access would you like to see access provided to? (Please provide names of waterbody, county, and nearest town or village.)

| Waterbody | County | Nearect town or village |
| :---: | :---: | :---: |
|  |  |  |

Q15. Which current DEC access site would you like to see expanded or improved?

| DEC Accesc Site | Waterbody | County | Suggested improvement( $\varepsilon$ ) |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
|  |  |  |  |

That is the end of the survey. Thank you for your participation. Your input is very important to DEC. Please return your completed survey in the provided envelope.

## ABOUT RESPONSIVE MANAGEMENT

Responsive Management is an internationally recognized survey research firm specializing in natural resource and outdoor recreation issues. Our mission is to help natural resource and outdoor recreation agencies, businesses, and organizations better understand and work with their constituents, customers, and the public.
Focusing only on natural resource and outdoor recreation issues, Responsive Management has conducted telephone, mail, and online surveys, as well as multi-modal surveys, on-site intercepts, focus groups, public meetings, personal interviews, needs assessments, program evaluations, marketing and communication plans, and other forms of human dimensions research measuring how people relate to the natural world for more than 30 years. Utilizing our in-house, full-service survey facilities with 75 professional interviewers, we have conducted studies in all 50 states and 15 countries worldwide, totaling more than 1,000 human dimensions projects and almost $\$ 70$ million in research only on natural resource and outdoor recreation issues.
Responsive Management has conducted research for every state fish and wildlife agency and every federal natural resource agency, including the U.S. Fish and Wildlife Service, the National Park Service, the U.S. Forest Service, Bureau of Land Management, U.S. Coast Guard, and the National Marine Fisheries Service. Additionally, we have also provided research for all the major conservation NGOs including the Archery Trade Association, the American Sportfishing Association, the Association of Fish and Wildlife Agencies, Dallas Safari Club, Ducks Unlimited, Environmental Defense Fund, the Izaak Walton League of America, the National Rifle Association, the National Shooting Sports Foundation, the National Wildlife Federation, the Recreational Boating and Fishing Foundation, the Rocky Mountain Elk Foundation, Safari Club International, the Sierra Club, Trout Unlimited, and the Wildlife Management Institute. Other nonprofit and NGO clients include the American Museum of Natural History, the BoatUS Foundation, the National Association of Conservation Law Enforcement Chiefs, the National Association of State Boating Law Administrators, and the Ocean Conservancy. As well, Responsive Management conducts market research and product testing for numerous outdoor recreation manufacturers and industry leaders, such as Winchester Ammunition, Vista Outdoor (whose brands include Federal Premium, CamelBak, Bushnell, Primos, and more), Trijicon, Yamaha, and others.
Responsive Management also provides data collection for the nation's top universities, including Auburn University, Clemson University, Colorado State University, Duke University, George Mason University, Michigan State University, Mississippi State University, North Carolina State University, Oregon State University, Penn State University, Rutgers University, Stanford University, Texas Tech, University of California-Davis, University of Florida, University of Montana, University of New Hampshire, University of Southern California, Virginia Tech, West Virginia University, Yale University, and many more.
Our research has been upheld in U.S. Courts, used in peer-reviewed journals, and presented at major wildlife and natural resource conferences around the world. Responsive Management's research has also been featured in many of the nation's top media, including Newsweek, The Wall Street Journal, The New York Times, CNN, National Public Radio, and on the front pages of The Washington Post and USA Today.
