## Acknowledgments

Responsive Management would like to thank Steven LaPan, Stephen Hurst, and Greg Kozlowski of the New York State Department of Environmental Conservation, Division of Fish and Wildlife, Bureau of Fisheries, for their input, support, and guidance on this project.

## EXECUTIVE SUMMARY

To help assess both the biological and human dimensions aspects of managing New York's freshwater fisheries, the New York State Department of Environmental Conservation's (DEC) Bureau of Fisheries (hereinafter referred to as the "Bureau") has contracted surveys of its licensed freshwater anglers approximately every 10 years starting in 1973. This survey was conducted in 2018 and addresses angler effort, expenditures, and attitudes for calendar year 2017 (hereinafter referred to as the "2017 survey").

The 2017 survey was conducted by Responsive Management both online and by mail. The online survey was the primary method for obtaining data, with a mail survey conducted to address any potential biases in the online survey sample. Note that the online survey was a closed survey, meaning only those specifically invited to take it could complete the survey. In addition, a telephone survey of non-responders to the online and mail surveys was conducted to assess any potential biases in the other methods.

The study's results are presented in four reports, with data presented in reports 1 through 3 and the survey and analysis methodology presented in the fourth report.

The survey questionnaire was developed cooperatively by Responsive Management and the Bureau, based in part on the previous mail surveys that the Bureau had conducted. Two questionnaires were developed for the 2017 survey: a paper copy for mail surveying, and an electronic version for online surveying. Responsive Management conducted pre-tests of the questionnaires to ensure proper wording, flow, and logic.

The Bureau provided a database of individuals who had a valid freshwater fishing license any time during the calendar year 2017. Note that the database was used solely for the survey; all personal identifying information was stripped from any data provided to the Bureau. Upon completion of the surveying effort, Responsive Management has not and will not use the database for any other purposes.

From this database, a sample of anglers was drawn. The sampling and contact plan was to attempt to contact those with a valid email address by email and send mail surveys only to those who did not have a valid email address. Both samples (the online and mail samples) were drawn from the license database so that the various license types were proportional to their actual representation in the database and the angler age structure in the sample matched the age structure of the license database.

## ANGLER DEMOGRAPHICS

The study compared anglers to the general population of New York State; anglers tend to be a little older than the general population, and males compose a much greater proportion of anglers than they do the general population (the general population is $49 \%$ male; anglers as a group are $90 \%$ male).

## FISHING PARTICIPATION AMONG LICENSED ANGLERS

Half of licensed anglers surveyed were avid in that they had fished all 5 of the previous 5 years. About a third were intermittent (fished at least 1 of the previous 5 years), while the remainder (about a sixth) had not fished in the previous 5 years.

## PREFERENCES FOR SPECIES, METHODS OF FISHING, AND WATERBODIES FISHED

Most commonly, anglers' top choices were largemouth and smallmouth bass. Indeed, in every DEC administrative region, one of those bass species topped the ranking. Brown trout, brook trout, and walleye were also highly preferred by anglers; followed by rainbow trout. Out of state anglers more preferred smallmouth bass, followed by largemouth bass, coho/Chinook salmon, and brown trout.

The survey also explored anglers' ability to fish for their preferred species, as some anglers had not fished their preferred species in 2017. For example, $60 \%$ of anglers who prefer to fish for channel catfish had not fished for it in 2017, with similar results for pickerel and bullhead (both $53 \%$ ). On the other hand, $80 \%$ of those who prefer coho/Chinook salmon had targeted those species in 2017 , along with anglers preferring brown trout ( $78 \%$ ), muskie ( $77 \%$ ), walleye $(77 \%$ ), and sunfish ( $76 \%$ ) (note that sunfish included bluegill, pumpkinseed, redbreast, and rock bass).

Individual fish species were grouped for analysis into warmwater gamefish, coldwater gamefish, and panfish (defined below). Half of anglers (50\%) prefer one of the warmwater gamefish, 33\% prefer one of the coldwater gamefish, $7 \%$ prefer panfish, and $8 \%$ have no preference. One marked difference regionally (with "out of state" being its own "region") is that warmwater gamefish are most preferred by anglers from every region, while coldwater gamefish are the most preferred of anglers coming from out of state.

[^0]The survey asked anglers to choose their two favorite fishing methods. Fishing by motorized boat is the most popular ( $35 \%$ chose this as their top method), followed by shore angling ( $27 \%$ ), wading in streams ( $20 \%$ ), and fishing from a non-motorized boat ( $11 \%$ ). A relatively small proportion of anglers prefer pier or ice fishing ( $3 \%$ each).

Ponds/lakes other than the Great Lakes are the most commonly preferred water type for fishing statewide (44\%). If the Great Lakes are included, the results increase to $55 \%$ preferring ponds/lakes.

## HARVEST OF FISH

For each species, anglers were asked how often they harvest (i.e., keep) the fish they catch that are of legal size. The most commonly kept species include yellow perch, walleye, rainbow trout, brown trout, brook trout, and lake trout.

Species that are least commonly kept include tiger muskellunge, carp, muskie, channel catfish, pickerel, and striped bass.

## BOATING

The survey found that $60 \%$ of anglers use a boat for at least some of their fishing, with $36 \%$ using a boat in multiple waters-these latter $36 \%$ were asked about what they do to minimize the spread of invasive species. Most anglers who use a motorized boat in multiple waters take some actions to help minimize the spread of invasive species: $68 \%$ of these anglers remove mud and clinging plants from their boat and trailer, $58 \%$ drain the bilge, $52 \%$ drain the baitwell or live well, $52 \%$ wash the boat, and $33 \%$ dry the boat (note that multiple responses were allowed; most boaters took multiple actions. Regionally, upstate and western New York State anglers were the most likely to use a boat in multiple waters (along with out-of-staters).

The boating data were examined by angler avidity (consistent anglers were defined as those who fished all 5 of the previous 5 years; intermittent anglers were defined as those who fished at least 1 year but not all 5 of the previous 5 years). Although intermittent anglers were less likely to use a boat in multiple waters compared to consistent anglers, they were, nonetheless, still more likely to use a boat in multiple waters but not take any of the listed actions.

## LIVE BAITS

Just under half of anglers ( $46 \%$ ) use some type of live bait, most commonly purchased baitfish ( $38 \%$ ). Additionally, $14 \%$ use crayfish, $10 \%$ use personally collected baitfish, and $2 \%$ use aquatic insects (note that anglers could use multiple types). The use of purchased live baitfish is particularly prevalent in Regions 5 through 9.

The disposal of live baitfish into the waterbody is discouraged because doing so can spread invasive species and/or disease and/or it can introduce species that out-compete native fish for food. New York fishing regulations prohibit, among other things pertaining to live baitfish, the transport and dumping of live baitfish into any body of water from a different waterbody. The data show that $13 \%$ of anglers dump their unused baitfish into the body of water in which they are fishing. Note that the question did not determine if they are dumping baitfish from a different body of water.

## OPINIONS ON THE SALE OF YELLOW PERCH, PUMPKINSEED, BLUEGILL, AND REDBREAST SUNFISH

The survey asked anglers about whether they had sold any yellow perch, pumpkinseed, bluegill, or redbreast sunfish that they caught. Less than $1 \%$ of anglers did so. The same question also determined that $62 \%$ caught those types of fish but did not sell them, and $38 \%$ did not catch those types of fish.

The survey asked about anglers' perceptions regarding the effect that allowing the sale of anglercaught yellow perch, pumpkinseed, bluegill, and redbreast sunfish has on those fisheries in New York. The majority of anglers think that the effect is harmful to the fisheries: $74 \%$ of anglers think it harms the yellow perch fishery, and $71 \%$ think it harms the fisheries of pumpkinseed, bluegill, and redbreast sunfish. Concerns with the potential harmful impacts of the sale of anglercaught yellow perch and sunfishes did not vary widely by region or angler avidity.

## ENCOURAGING FISHING PARTICIPATION

Given a list of actions that that the Bureau could take to possibly encourage an increase in fishing activity, anglers most commonly chose having the Bureau provide better information on where to fish ( $21 \%$ chose this as the top action that could increase fishing participation) and increase the number of locations for fishing from the shore (also selected by $21 \%$ ). Providing additional information on current fishing opportunities and conditions (14\%), increasing the number of locations to launch a motorboat (11\%), and simplifying the fishing regulations (10\%) were also selected by substantial percentages.

## INTRODUCTION

The management of New York's freshwater fisheries has both a biological aspect and a human dimensions aspect, requiring that the state know what its anglers' preferences and practices are. To this end, the New York State Department of Environmental Conservation's (DEC) Bureau of Fisheries (hereinafter referred to as the "Bureau") has contracted surveys of its licensed freshwater anglers approximately every 10 years starting in 1973. Prior to this latest survey, the survey was most recently conducted by the Human Dimensions Research Unit at Cornell University in 2007-2008 (Connelly and Brown 2009).

Prior surveys were conducted by mail in 1973, 1976-1977, 1988, 1996, and 2007-2008. All of the surveys prior to 2007-2008 were done as a single annual mailing (i.e., the survey asked about a calendar year, with one survey covering the entire year); the survey in 2007-2008 was conducted as a trimester recall survey, with three surveys spaced throughout the year in which respondents answered questions regarding the previous 3 - to 5 -month period. This was done to test whether this shorter recall time would be more accurate than the single-year survey. The 2007-2008 survey included a single-year survey, conducted by telephone, on a smaller sample to be compared with the trimester recall survey.

The conclusions of that report (Connelly and Brown 2009) were that there were very few statistically significant differences in the trimester recall survey compared to a single-year survey on the test variables. For instance, the report stated: "Estimates of fishing effort derived from the three-phase survey did not differ significantly very often from the 12-month recall survey, and when differences occurred, no consistent pattern could be found." In light of the greater costs associated with a three-phase survey, which were deemed to outweigh the benefits, the Bureau decided to contract a single-year survey in 2018 about angler activity during calendar year 2017 (hereinafter referred to as the "2017 survey").

The 2017 survey was conducted both online and by mail. The online survey was the primary method for obtaining data, with a mail survey being conducted to address any potential bias in the online survey sample. Note that the online survey was a closed survey, meaning only those specifically invited to take it could complete the survey. In addition, a telephone survey of nonresponders to the online and mail surveys was conducted to help assess any potential biases in the other methods. The 2017 survey effort, which included online, mail, and telephone surveys, was conducted by Responsive Management. The study's results are presented in four reports, with data presented in reports 1 through 3 and the methods presented in the fourth report. This is Report 2, which explores anglers' preferences and attitudes toward fishing and fisheries management. (Report 1 shows effort and expenditures data, Report 3 shows results for each county, and Report 4 explains the full methodology.)

## SURVEYING METHODOLOGY

The overarching purpose of these ongoing surveys is to determine angler preferences, opinions, behaviors, spending, and travel. The study entailed a scientific multi-modal survey of licensed New York freshwater anglers. Specific aspects of the surveying methodology are detailed below. (More detailed information on the survey methodology is presented in the fourth report as part of this project, New York Angler Survey: Full Description of Methodology, Possible Biases, and Recommendations for Improving Future Surveys, Report 4 of 4.)

## Use of a Multi-Modal Survey

As mentioned previously, the survey combined a closed online survey of licensed anglers (closed means that only those identified and invited to take the survey could take it; a person surfing the Internet could not stumble across the survey and take it) with a mail survey of licensed anglers.

## Questionnaire Design

The survey questionnaire was developed cooperatively by Responsive Management and the Bureau, based partly on the previous mail surveys that the Bureau had contracted but including some new questions. Two questionnaires were developed for this 2017 survey: a paper copy for mail surveying (shown in the Appendix), and an electronic version for online surveying. Responsive Management conducted pre-tests of the questionnaires to ensure proper wording, flow, and logic in them.

## Survey Sampling

The survey goal was to obtain at least 10,250 completed questionnaires with resident and non-resident anglers who had purchased a fishing license valid at any time in 2017, including resident and non-resident 1-day, 7-day, and annual licenses, as well as lifetime, resident senior, and military licenses. The survey sampling plan called for approximately 8,200 questionnaires to be obtained from the closed online survey and approximately 2,050 to be obtained by postal mail. The sampling and contact procedures were to attempt to contact those with a valid email address by email and send mail surveys only to those who did not have a valid email address. Note that the plan was to give the full survey only to those anglers who had fished in 2017, 2016, and/or 2015, but the questionnaires of those who did not fish in any of those years were recorded to establish participation rates in fishing among various categories of license holders.

To start, the Bureau provided a database of individuals who had a freshwater fishing license valid for any time during the calendar year 2017 (this includes holders of any short-term licenses valid at any part of 2017 and annual license purchasers from January 1, 2016, through December 31, 2017-because annual licenses are valid 365 days from the date of purchase, all annual licenses purchased during that time were valid during part of the calendar year 2017). Note that the database was used solely for the survey; all personal identifying information was stripped from any data provided to the Bureau. Upon completion of the surveying effort, Responsive Management has not and will not use the database for any other purposes.

The database was first prepared for the samples to be drawn, one sample for email contact and another sample for postal mail contact. Responsive Management's initial task in preparing the database was to de-duplicate it. This is necessary because some people are in the database more than once, typically because they have purchased more than one license. Duplicate anglers are taken out so that each data record is a unique individual.

This de-duplicated database was used to establish the age structure of holders of each license type; the database can be thought of as containing two pools: an online pool (license holders with a valid email addresses in the database) and a postal mail pool (those without a valid email address - note that all records included a postal mail address). In the next step, Responsive Management removed invalid email addresses (e.g., "noemail@noemail.com"); these anglers were put into the postal mail pool. Responsive Management then used the online survey vendor's
automated pre-launch check, which identified additional invalid emails-these anglers were also put into the postal mail pool.

From the two pools in this database, an online sample and a postal mail sample of anglers were drawn. Each sample (the online sample and the mail sample) was pulled from the license database so that the various types of licenses were proportional to their actual representation in the database and the age structure within each license type in the sample matched the age structure of each license type in the license database.

## Contact Procedures

The email survey was sent on February 28 and March 1 (random halves sent on each date; not two emails to the same person). The Bureau also sent a separate email to assure potential respondents of the legitimacy of the survey; it was sent on March 6, 2018. Email reminders encouraging anglers to take the survey were then sent on March 8, March 22, and April 3, 2018, under the direction of Responsive Management (i.e., not sent by the Bureau).

The mail survey was postmarked on March 15, 2018. A follow-up mailing to 1,025 of those who had not responded (with the paper survey again enclosed) was postmarked on June 8, 2018.

The cutoff after which no new mail or online surveys would be accepted was August 31, 2018.

## Response Rates

The response rate is based on the number of completed questionnaires compared to the number of people in the survey of whom a contact was attempted. This calculation does not include invalid sample records that were removed in the development of the final sample, such as duplicate records of people already in the sample (which can happen when the same person is in the database twice because he or she held two licenses) or people who have no valid contact information. Nor does the response rate calculation include records in the sample that are determined to be invalid after the development of the final sample, such as those records for people who are no longer at the address or telephone number provided or who have died-these invalid records are revealed during the administration of the survey.

In the email sample, there were 43,514 contacts attempted that are considered valid email contacts. Responsive Management obtained 9,338 completed online questionnaires, resulting in a response rate of $21.5 \%$.

For the final postal mail sample considered in the response rate, there were 13,410 questionnaires mailed to valid contacts. In the mail portion of the survey, Responsive Management obtained 1,997 completed questionnaires, resulting in a response rate of $14.9 \%$.

## ANALYSIS OF SURVEY DATA

This section on the data analysis discusses the data format, the weighting procedures, the types of fish, the types of waters, and the regions.

## Data Obtained From Surveys

All of the data were in the online survey vendor's format. The online respondents entered their responses directly during the survey. The mail survey questionnaires were returned to Responsive Management's office, and the responses were entered into the online version of the survey from the mail surveys by Responsive Management staff. Once all the data were obtained/entered, the online data were then imported directly into IBM SPSS Statistics for analyses.

## Data Weighting

The decision was made by the research team, in consultation with the Bureau, to weight all the data to the age, gender, and regional breakdown of the database from which the samples were pulled. The license database included the age, gender, and county of residence, and those data were appended to the survey data for each respondent. (Note that before any survey data were subsequently provided to the Bureau, all personal information that could link a survey respondent to a particular person was removed to ensure that all respondents were completely anonymous.)

## Types of Fish

In the study, fish species groupings were used as shown in Table 1. These are the same groupings as were used in DEC's 2007 survey (Connelly and Brown 2009), with the exception of shad. The Hudson River shad fishery in New York was closed during 2017.

| Table 1. $\quad$ Species Groupings as Defined for This Report |
| :--- |
| Warmwater gamefish |
| Black bass (small or largemouth) |
| Muskie |
| Northern pike |
| Pickerel |
| Tiger muskie |
| Walleye |
| Coldwater gamefish |
| Coho/Chinook salmon |
| Lake trout |
| Landlocked Atlantic salmon |
| Steelhead trout |
| Trout (brook, brown, rainbow) |
| Panfish |
| Bluegill/sunfish |
| Bullheads, catfish |
| Crappie (calico bass) |
| Yellow perch |
| Marine/anadromous |
| Striped bass |
| Carp |

## Types of Waters

Fresh waters in the state were categorized as being inland or Great Lakes-related. In these reports "Great Lakes" waters were defined as Lake Erie and its embayments, the Niagara River, Lake Ontario and its embayments, and the portions of major Lake Erie and Lake Ontario tributaries in the county closest to the lake (below the first barrier impassable to fish), as well as the

St. Lawrence River and its embayment and tributaries. This categorization was possible only when the name of the waterbody was known, as well as the county for some waterbodies. Note that this survey and the analysis of data used a more detailed breakdown of the Great Lakes than did prior reports contracted by the Bureau.

Specifically, in the analysis of the Great Lakes waters, the following lists were used:

## Lake Erie Embayments

Dunkirk Harbor
Barcelona Harbor
Buffalo Harbor
Lake Erie Tributaries
Big Sister Creek
Buffalo Creek
Buffalo River
Canadaway Creek
Cattaraugus Creek (only the portion in Chautauqua, or Erie Counties)
Cayuga Creek
Cazenovia Creek
Chautauqua Creek
Clear Creek (Erie County; tributary to Cattaraugus Creek)
Delaware Creek
Eighteen Mile Creek (Erie County)
Silver Creek
Smokes Creek
Walnut Creek

## Lake Ontario Embayments

Black River Bay
Blind Sodus Bay (Wayne County)
Braddock Bay
Buck Pond
Chaumont Bay
Cranberry Pond
East Bay (Wayne County)
Henderson Harbor
Irondequoit Bay
Little Sodus Bay
Long Pond
Maxwell Bay
Mexico Bay
Port Bay
Sandy Pond
Sodus Bay

## Lake Ontario Tributaries

Bear Creek (Wayne County)
Black River (Village of Dexter; Jefferson County)
Deer Creek (Oswego County)
Eighteen Mile Creek (Niagara County)
Four Mile Creek (Monroe County)
Genesee River (only the portion in Monroe County/City of Rochester)
Grindstone Creek
Irondequoit Creek
Johnson Creek
Keg Creek
Little Salmon River
Little Sandy Creek
Marsh Creek (Orleans County)
Maxwell Creek
Mill Creek (Jefferson County)
Mill Creek (Monroe County)
Ninemile Creek (Oswego County)
Oak Orchard Creek (only the portion in Orleans County)
Orwell Brook
Oswego River (only the portion at the City of Oswego)
Salmon Creek (the one in Monroe County)
Salmon River
Sandy Creek (AKA "North Sandy" - Jefferson County)
Sandy Creek (Monroe County)
South Sandy Creek
Sterling Creek
Stony Creek
Twelvemile Creek (Niagara County)
St. Lawrence Embayments and Tributaries
Brandy Brook
Chippewa Bay
Coles Creek
Eel Bay
Goose Bay
Lake of the Isles
Oswegatchie River (City of Ogdensburg only; St. Lawrence County)
Raquette River (City of Massena only; St. Lawrence County)

## Regions

Addition analyses were conducted at the DEC administrative regional level, as shown in Figure 1.

Region 1: Long Island
Region 2: New York City
Region 3: Lower Hudson Valley
Region 4: Capital Region / Northern Catskills
Region 5: Eastern Adirondacks / Lake Champlain
Region 6: Western Adirondacks / Eastern Lake Ontario
Region 7: Central New York
Region 8: Western Finger Lakes
Region 9: Western New York
Figure 1. NYSDEC Regions

## ANGLER DEMOGRAPHICS

Table 2 shows how angler age distribution compares to the general population of New York State. Interestingly, angler age distribution in the survey (any person who had a New York freshwater fishing license in the past 5 years) is very similar to that of the New York State population as a whole and to active anglers (defined as having fished at least once in 2017). Males compose a much greater proportion of anglers than they do the general population (the general population is $49 \%$ male; anglers as a group are $90 \%$ male). Figure 2 shows these results visually.

Table 2. Comparison of NY State Population, All Anglers in Survey, and Current Anglers

|  | NY State Population (U.S. <br> Census Bureau) | All Anglers in Survey | Current Anglers |
| :---: | :---: | :---: | :---: |
|  | Percent |  |  |
| Age | 20 |  |  |
| $65+$ | 16 | 20 | 19 |
| $55-64$ years | 16 | 18 | 19 |
| $45-54$ years | 15 | 19 | 19 |
| $35-44$ years | 18 | 15 | 16 |
| $25-34$ years | 12 | 16 | 16 |
| $18-24$ years | 3 | 10 | 10 |
| $16-17$ years |  | 2 | 2 |
| Gender | 49 |  |  |
| Male | 51 | 90 | 90 |
| Female |  | 10 | 10 |

Current anglers are defined as those who fished at least once in 2017.

## Comparison of NY State Population, All Anglers in Survey, and Current Anglers.

Figure 2. Comparison of Demographics

## PAST FISHING ACTIVITY

The first survey question asked about the past 5 years of fishing activity (from 2013 through 2017), but note that the full survey was given only to those who had fished at least once in 2015, 2016, or 2017. Table 3 shows the results regarding the past 5 years. Figure 3 shows the statewide results regarding past fishing activity.

Table 3. Past Fishing Activity of Fishing License Holders, Statewide and by Region of Residence

Figure 3. Past Fishing Activity Among All License Holders in the Sample

## PREFERENCES FOR SPECIES, WATERBODIES, AND METHODS OF FISHING

Table 4 and Figure 4 show anglers' preferred species; in the survey, anglers ranked their top 5 species. Most commonly, the top choice was largemouth bass, followed closely by smallmouth bass. The table and graph show the top choices ranked by percentage preferring that species.

| Table 4. Anglers' Five Favorite Species to Fish for in New York State |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
| Species | Percentage of Anglers Preferring Species |  |  |  |

## Anglers' preferred species to fish for in New York.

Figure 4. Anglers' Species Preferences in New York

Table 5 shows the regional results regarding anglers' top choice of species. In every region, one of the two common bass species (largemouth and smallmouth) tops the ranking. There are also substantial percentages in the regions preferring brook, brown, or rainbow trout and walleye. Out of state anglers most prefer smallmouth bass (18\%), followed by largemouth bass (15\%) and coho/Chinook salmon and brown trout (both 13\%).

Table 5. Anglers' Top-Choice Species to Fish for in New York, by Region

| Species | Percent Saying the Species Was Their Top Choice |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Landlocked Atlantic salmon | 1 | 0 | 0 | 1 | 2 | 1 | 1 | 2 | 0 | 3 |
| Steelhead | 2 | 2 | 1 | 1 | 2 | 1 | 1 | 3 | 8 | 9 |
| Sunfish (bluegill, pumpkinseed, redbreast, rock bass) | 1 | 2 | 1 | 1 | 1 | 1 | 2 | 2 | 1 | 1 |
| Tiger muskellunge | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 |
| Brook trout | 7 | 12 | 8 | 11 | 19 | 12 | 6 | 4 | 4 | 7 |
| Brown trout | 7 | 14 | 14 | 7 | 7 | 6 | 6 | 7 | 6 | 13 |
| Lake trout | 2 | 3 | 3 | 2 | 3 | 3 | 2 | 3 | 1 | 3 |
| Rainbow trout | 10 | 8 | 7 | 7 | 5 | 3 | 4 | 4 | 4 | 4 |
| Walleye | 1 | 2 | 1 | 6 | 5 | 12 | 14 | 4 | 17 | 5 |
| No specific preferred type | 8 | 12 | 9 | 9 | 8 | 7 | 9 | 10 | 9 | 4 |

Table 6 shows that most anglers were able to fish for their preferred species in 2017. Nonetheless, substantial percentages did not do so; for instance, $30 \%$ of anglers who said largemouth bass was their preferred species did not fish for it in 2017.

Table 6. Anglers Who Fished for Their Favorite Species in 2017

| Species | Percentage Who Say the <br> Given Species Is Their <br> Favorite | Among Those Who Say the <br> Given Species Is Their <br> Favorite, the Percentage <br> Who Fished for It |
| :--- | :---: | :---: |
| Bass, largemouth | 22 | 70 |
| Bass, smallmouth | 16 | 73 |
| Bass, striped (freshwater only) | 1 | 68 |
| Bullhead | 1 | 47 |
| Carp | 1 | 63 |
| Catfish, channel | 1 | 40 |
| Crappie / calico bass | 1 | 70 |
| Muskie | 1 | 77 |
| Northern pike | 3 | 69 |
| Perch, yellow | 4 | 71 |
| Pickerel | Less than 0.5 | 47 |
| Salmon, coho / Chinook | 4 | 80 |
| Salmon, landlocked Atlantic | 2 | 63 |
| Steelhead | 4 | 73 |
| Sunfish (bluegill, <br> pumpkinseed, redbreast, rock <br> bass) | 1 | 76 |
| Tiger muskellunge | Less than 0.5 | 58 |
| Trout, brook | 8 | 60 |
| Trout, brown | 9 | 78 |
| Trout, lake | 3 | 60 |
| Trout, rainbow | 5 | 58 |
| Walleye | 8 | 77 |

Table 7 shows anglers' preferred species by species group. The statewide results are in the first data row, and then the data are shown broken down by region of residence. One marked difference regionally (with "out of state" being a region) is that warmwater gamefish are the most preferred in every region, while coldwater gamefish are the most preferred of those coming from out of state. Table 8 shows the results by angler avidity.

The survey asked anglers to choose their two favorite methods of fishing. Fishing by motorized boat is most popular ( $35 \%$ chose this as their top method), followed by shore angling ( $27 \%$ ), wading in streams ( $20 \%$ ), and fishing from a non-motorized boat ( $11 \%$ ). A relatively small proportion of anglers prefer pier or ice fishing ( $3 \%$ each) (Table 9).

| Table 7. Anglers' Favorite Species Group to Fish For, by Region |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Percent Whose Favorite Species to Fish For Is This Type |  |  |  |  |  |  |
|  | Warmwater <br> Gamefish | Coldwater <br> Gamefish | Panfish | Marine / <br> Anadromous | Carp | No Specific <br> Type |  |
| Statewide | 50 | 33 | 7 | 1 | 1 | 8 |  |
| Region of Residence | 59 | 28 | 2 | 2 | 1 | 8 |  |
| Region 1: Long <br> Island | 38 | 40 | 5 | 3 | 2 | 12 |  |
| Region 2: New <br> York City | 48 | 35 | 4 | 5 | 1 | 9 |  |
| Region 3: Lower <br> Hudson Valley | 52 | 29 | 7 | 3 | 1 | 9 |  |
| Region 4: Capital <br> Region / Northern <br> Catskills | 54 | 39 | 9 | 0 | 0 | 8 |  |
| Region 5: Eastern <br> Adirondacks / <br> Lake Champlain | 44 | 27 | 9 | 0 | 1 | 7 |  |
| Region 6: Western <br> Adirondacks / <br> Eastern Lake <br> Ontario | 57 | 56 | 22 | 11 | 0 | 1 |  |

Table 8. Anglers' Favorite Species Group to Fish For, by Avidity Level

|  | Percent Whose Favorite Species to Fish For Is This Type |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Warmwater <br> Gamefish | Coldwater <br> Gamefish | Panfish | Marine / <br> Anadromous | Carp | No Specific <br> Type |
|  |  |  |  |  |  |  |
| Consistent angler | 52 | 33 | 8 | 1 | 1 | 5 |
| Intermittent angler | 47 | 33 | 6 | 1 | 1 | 12 |

Consistent angler $=$ fished all 5 of past 5 years; Intermittent angler $=$ fished less than 5 of all past 5 years.

Table 9. Anglers' Preferred Ways to Fish

|  | First choice | First or second choice |
| :--- | ---: | ---: |
| From shore | 27 | 54 |
| From a fishing pier | 3 | 13 |
| Wading in streams | 20 | 34 |
| Through the ice | 3 | 11 |
| From a motorized boat | 35 | 52 |
| From a non-motorized boat/watercraft | 11 | 30 |

Survey asked anglers' to choose their two favorite ways to fish, regardless of species.

Table 10 suggests that ponds/lakes other than the Great Lakes are the most preferred water type for fishing statewide when fishing for their preferred species (44\%). If the Great Lakes are included, the results increase to $55 \%$ preferring ponds/lakes. Table 11 shows anglers' top choice of waterbody type by region when fishing for their preferred species.

Table 10. Waterbody Types for Anglers' Preferred Species

|  | Top Choice | Second Choice |
| :--- | ---: | ---: |
| Pond/lake (other than Great Lakes) | 44 | 40 |
| Stream/river (other than Great Lake tributaries) | 25 | 24 |
| Great Lakes - lakes and bays | 11 | 10 |
| Great Lakes - tributaries | 8 | 8 |
| No preferred waterbody | 8 | NA |
| S |  |  |

Survey asked anglers' to rank their five favorite species of fish and then their preferred type of waterbody for that species.
Anglers were not directly asked to name their favorite types of waterbodies. An example of how to interpret the table is helpful: the first data cell shows that $44 \%$ of anglers named "pond/lake (other than Great Lakes)" as their preferred waterbody for their top preferred species of fish.

Table 11. Top Waterbody Type for Anglers' Preferred Species, by Region of Residence

| Region of Residence | Percentage preferring pond/lake (other than Great Lakes) | Percentage preferring stream/river (other than Great Lake tributaries) | Percentage preferring Great Lakes | Percentage preferring Great Lakes tributaries | Percentage with no preferred waterbody |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Region 1: Long Island | 63 | 24 | 1 | 3 | 10 |
| Region 2: New York City | 41 | 38 | 3 | 4 | 13 |
| Region 3: Lower Hudson Valley | 54 | 33 | 2 | 3 | 9 |
| Region 4: Capital Region / Northern Catskills | 57 | 32 | 2 | 2 | 7 |
| Region 5: Eastern Adirondacks / Lake Champlain | 60 | 29 | 2 | 2 | 7 |
| Region 6: Western Adirondacks / Eastern Lake Ontario | 42 | 30 | 12 | 7 | 9 |
| Region 7: Central New York | 54 | 24 | 8 | 5 | 9 |
| Region 8: Western Finger Lakes | 46 | 18 | 18 | 8 | 9 |
| Region 9: Western New York | 33 | 18 | 24 | 16 | 9 |
| Out of state | 35 | 27 | 15 | 18 | 5 |

The survey asked anglers' to rank their five favorite species of fish and then their preferred type of waterbody for that species. Anglers were not directly asked to name their favorite types of waterbodies. This shows only the waterbody type associated with their top choice of species. Note that some anglers fished outside their region of residence for that top species.

## HARVEST OF FISH

For each species, anglers were asked to say how often they harvest (i.e., keep) the fish they catch that are of legal size. Table 12 shows the statewide results, while Tables 13 through 21 show the results of each region. Table 22 shows the results among New York anglers coming from out of state. In the statewide results, percentages among those who fish for the species are shown in the second row for each species.

Table 12. Harvest of Various Species, Statewide
Q12. Please indicate how often you harvest the species listed below if they are of legal size.

|  | Always | Frequently | Occasionally | Never | Do not fish for the species |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Bass, largemouth | 5 | 8 | 29 | 48 | 10 |

## BOATING

The survey found that $60 \%$ of anglers use a boat for at least some of their fishing, with $36 \%$ using a boat in multiple waters-these latter $36 \%$ were asked about what they do to minimize the spread of invasive species. Most anglers who use a motorized boat in multiple waters take some actions to help minimize the spread of invasive species: $68 \%$ of these anglers remove mud and clinging plants from their boat and trailer, $58 \%$ drain the bilge, $52 \%$ drain the baitwell or live well, $52 \%$ wash the boat, and $33 \%$ dry the boat (note that multiple responses were allowed; most boaters took multiple actions). Regionally, upstate and western New York State anglers were the most likely to use a boat in multiple waters (along with out-of-staters). Figure 5 shows the actions among all anglers and the percentage of anglers who do not use a boat in multiple waters. Figure 6 shows the results among anglers who use a motorized boat in multiple waters.

Figure 5. Actions Boaters Take to Minimize the Spreading of Invasive Species, Among All Anglers

Figure 6. Actions Boaters Take to Minimize the Spreading of Invasive Species, Among Anglers Who Use Boats in Multiple Waters

Table 23 shows the boat-related questions regionally. Upstate and western New York State anglers are the most likely to use a boat in multiple waters (along with out-of-staters). Table 24 shows the results by angler avidity. Although intermittent anglers, compared to consistent anglers, are less likely to use a boat in multiple waters in the first place, they are, nonetheless, still more likely to use a boat in multiple waters but not take any of the listed actions.

Table 23. Actions Taken Following a Boating Trip and Before Boating in Another Waterbody, by Region

| Region of Residence | Do not use a motorized boat at all | Do not use a boat in multiple waterbodies | Drain bilge | Drain baitwell and/or live well | Remove mud or clinging plants from boat and trailer | Wash the boat | Dry the boat | None of the listed actions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Region 1: <br> Long Island | 56 | 17 | 12 | 9 | 14 | 16 | 8 | 6 |
| Region 2: New <br> York City | 64 | 17 | 6 | 6 | 7 | 7 | 3 | 5 |
| Region 3: <br> Lower Hudson <br> Valley | 55 | 17 | 13 | 12 | 15 | 15 | 8 | 5 |
| Region 4: <br> Capital Region <br> / Northern <br> Catskills | 45 | 21 | 21 | 19 | 26 | 21 | 14 | 3 |
| Region 5: <br> Eastern <br> Adirondacks / <br> Lake <br> Champlain | 36 | 29 | 23 | 19 | 28 | 22 | 15 | 3 |
| Region 6: Western Adirondacks / Eastern Lake Ontario | 32 | 31 | 23 | 22 | 26 | 19 | 11 | 3 |
| Region 7: Central New York | 37 | 25 | 23 | 21 | 29 | 18 | 14 | 3 |
| Region 8: <br> Western <br> Finger Lakes | 34 | 28 | 23 | 19 | 27 | 17 | 13 | 5 |
| Region 9: <br> Western New <br> York | 37 | 26 | 23 | 19 | 25 | 20 | 12 | 4 |
| Out of state | 38 | 21 | 23 | 23 | 26 | 21 | 12 | 9 |

Other than the first two columns and the last column, respondents can give multiple responses.

Table 24. Actions Taken Following a Boating Trip and Before Boating in Another Waterbody, by Avidity

| Avidity Level | Do not use <br> a motorized <br> boat at all | Do not use a <br> boat in <br> multiple <br> waterbodies | Drain | Drain <br> baitge <br> bad/or live <br> well | Remove mud or <br> clinging plants <br> from boat and <br> trailer | Wash the <br> boat | Dry the <br> boat | None of <br> the listed <br> actions |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Consistent <br> angler | 35 | 26 | 25 | 23 | 30 | 22 | 14 | 4 |
| Intermittent <br> angler | 49 | 21 | 15 | 13 | 17 | 14 | 8 | 7 |

Other than the first two columns and the last column, respondents can give multiple responses. Consistent anglers are those who fished all 5 of the past 5 years; intermittent anglers are those who fished at least 1 year but not all 5 of the past 5 years.

## LIVE BAITS

Figure 7 shows that just under half of anglers (46\%) use some type of live bait, most commonly purchased baitfish (this number is derived as the converse of the $54 \%$ who used none of those live baits). Table 25 shows regional results; the use of purchased live baitfish is particularly prevalent in Regions 5 through 9. Table 26 shows the results by angler avidity.

Figure 7. Use of Live Bait
Table 25. Use of Live Baits in New York in the Past 5 Years, by Region

| Region of Residence | Personally collected <br> baitfish (i.e., live fish): | Purchased live <br> baitfish | Crayfish | Aquatic <br> insects | None of <br> these |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Region 1: Long Island | 12 | 24 | 6 | 4 | 63 |
| Region 2: New York City | 13 | 26 | 5 | 3 | 66 |
| Region 3: Lower Hudson <br> Valley | 15 | 37 | 7 | 2 | 53 |
| Region 4: Capital Region / <br> Northern Catskills | 10 | 45 | 15 | 3 | 52 |
| Region 5: Eastern <br> Adirondacks / Lake <br> Champlain | 8 | 47 | 18 | 2 | 48 |
| Region 6: Western <br> Adirondacks / Eastern Lake <br> Ontario | 10 | 44 | 19 | 2 | 47 |
| Region 7: Central New York | 11 | 46 | 21 | 4 | 48 |
| Region 8: Western Finger <br> Lakes | 18 | 48 | 23 | 3 | 44 |
| Region 9: Western New <br> York | 4 | 20 | 5 | 1 | 42 |
| Out of state | 10 |  | 2 | 4 | 75 |

Multiple responses were allowed, except if last column's response was chosen.

Table 26. Use of Live Baits in New York in the Past 5 Years, by Avidity

| Avidity Level | Personally <br> collected <br> baitfish (i.e., <br> live fish): | Purchased live <br> baitfish | Crayfish | Aquatic insects | None of these |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Consistent angler | 13 | 47 | 18 | 3 | 45 |
| Intermittent angler | 6 | 24 | 8 | 2 | 68 |

Multiple responses were allowed, except if last column's response was chosen. Consistent anglers are those who fished all 5 of the past 5 years; intermittent anglers are those who fished at least 1 year but not all 5 of the past 5 years.

The disposal of live baitfish into the waterbody is discouraged because doing so can spread invasive species (e.g., zebra and quagga mussels, spiny water fleas) and disease, and/or it can introduce fish species that out-compete native fish for food. New York fishing regulations prohibit, among other things pertaining to live baitfish, the transport and dumping of live baitfish into any body of water from a different waterbody. The data show that $13 \%$ of anglers dump their unused baitfish into the body of water in which they are fishing (Figure 8). Note that the question did not determine if they are dumping baitfish from a different body of water. Table 27 shows the results regionally, and Table 28 shows the results by angler avidity.

## Q9. How do you most frequently dispose of baitfish / crayfish?

Figure 8. Actions Taken With Leftover Live Bait

| Table 27. Disposal of Baitfish and Crayfish, by Region |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Region of Residence | Keep for <br> next trip | Dump in <br> where I am <br> where <br> fishing | Give to <br> another <br> angler | Dump on <br> dry land | Dump in <br> trash | Don't use <br> baitfish / <br> crayfish |
| Region 1: Long Island | 8 | 12 | 11 | 1 | 4 | 61 |
| Region 2: New York City | 9 | 13 | 9 | 3 | 2 | 62 |
| Region 3: Lower Hudson Valley | 10 | 13 | 12 | 5 | 3 | 52 |
| Region 4: Capital Region / <br> Northern Catskills | 12 | 12 | 10 | 6 | 4 | 51 |
| Region 5: Eastern Adirondacks / <br> Lake Champlain | 16 | 12 | 9 | 8 | 5 | 46 |
| Region 6: Western Adirondacks / <br> Eastern Lake Ontario | 19 | 13 | 10 | 5 | 3 | 45 |
| Region 7: Central New York | 17 | 13 | 11 | 5 | 3 | 45 |
| Region 8: Western Finger Lakes | 16 | 17 | 10 | 6 | 4 | 43 |
| Region 9: Western New York | 16 | 17 | 14 | 4 | 4 | 41 |
| Out of state | 6 | 8 | 6 | 3 | 2 | 71 |

Table 28. Disposal of Baitfish and Crayfish, by Avidity

| Avidity Level | Keep for <br> next trip | Dump in <br> wherer I am <br> where <br> fishing | Give to <br> another <br> angler | Dump on <br> dry land | Dump in <br> trash | Don't use <br> baitfish / <br> crayfish |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Consistent angler | 16 | 15 | 11 | 6 | 4 | 44 |
| Intermittent angler | 8 | 10 | 9 | 2 | 3 | 64 |

Consistent anglers are those who fished all 5 of the past 5 years; intermittent anglers are those who fished at least 1 year but not all 5 of the past 5 years.

## OPINIONS ON THE SALE OF YELLOW PERCH, PUMPKINSEED, BLUEGILL, AND REDBREAST SUNFISH

The survey asked anglers about whether they had sold any yellow perch, pumpkinseed, bluegill, or redbreast sunfish that they may have caught. Less than $1 \%$ of anglers did so (Figure 9). The question was asked early in the survey to not be biased by later questions that discussed whether the fisheries of those species could be harmed by having recreational anglers sell some of their catch. Figure 10 shows the results of the question regarding possible harm. The survey asked about harm to yellow perch fisheries by itself in one part of the question and to pumpkinseed, bluegill, and redbreast sunfish fisheries in another part of the question. A combined $74 \%$ of anglers felt that the sale of yellow perch is either very harmful or somewhat harmful to the fishery. Results were very similar regarding the sale of pumpkinseed, bluegill, or redbreast sunfish ( $71 \%$ combined concern).

Note that this was asked early in the survey before the other questions about the fishery to avoid any bias that the other questions would have had on anglers' responses on this question. The use of the decimal for the "Yes" response is only because it would otherwise round to 0 . The use of the decimal place is not meant to imply that the survey is accurate to that level, because the value is less than the confidence interval on the question.
Figure 9. Sale of Yellow Perch, Pumpkinseed, Bluegill, or Redbreast Sunfish

Table 29 shows the regional results regarding the perceived effect of the commercial sale on yellow perch fisheries, and Table 30 shows those results regarding yellow perch by angler avidity. Table 31 shows the regional results regarding pumpkinseed, bluegill, and redbreast sunfish, while Table 32 shows those results by angler avidity. Concerns with the potential harmful effects of sale of angler-caught yellow perch and sunfishes did not vary widely by region or angler avidity.

Figure 10. Perceived Effect of Selling Fish on the Fisheries of Yellow Perch (top) and Pumpkinseed, Bluegill, and Redbreast Sunfish (bottom)

Table 29. Opinion on the Effect of Sale of Perch, by Region

| Region of Residence | Is very harmful to <br> the fishery | Is somewhat <br> harmful to the <br> fishery | Is somewhat <br> beneficial to the <br> fishery | Is very beneficial <br> to the fishery |
| :--- | :---: | :---: | :---: | :---: |
| Region 1: Long Island | 33 | 45 | 17 | 4 |
| Region 2: New York City | 33 | 48 | 15 | 4 |
| Region 3: Lower Hudson Valley | 27 | 47 | 21 | 5 |
| Region 4: Capital Region / <br> Northern Catskills | 25 | 48 | 23 | 4 |
| Region 5: Eastern Adirondacks / <br> Lake Champlain | 22 | 48 | 23 | 7 |
| Region 6: Western Adirondacks / <br> Eastern Lake Ontario | 23 | 45 | 24 | 8 |
| Region 7: Central New York | 23 | 53 | 20 | 5 |
| Region 8: Western Finger Lakes | 25 | 49 | 22 | 5 |
| Region 9: Western New York | 27 | 49 | 19 | 6 |
| Out of state | 27 |  |  | 5 |

Table 30. Opinion on the Effect of Sale of Perch, by Avidity

| Avidity Level | Is very harmful to <br> the fishery | Is somewhat <br> harmful to the <br> fishery | Is somewhat <br> beneficial to the <br> fishery | Is very beneficial <br> to the fishery |
| :--- | :---: | :---: | :---: | :---: |
| Consistent angler | 28 | 48 | 19 | 6 |
| Intermittent angler | 22 | 50 | 24 | 5 |

Consistent anglers are those who fished all 5 of the past 5 years; intermittent anglers are those who fished at least 1 year but not all 5 of the past 5 years.

Table 31. Opinion on the Effect of Sale of Pumpkinseed, Bluegill, and Redbreast Sunfish, by Region

| Region of Residence | Is very harmful to <br> the fishery | Is somewhat <br> harmful to the <br> fishery | Is somewhat <br> beneficial to the <br> fishery | Is very beneficial <br> to the fishery |
| :--- | :---: | :---: | :---: | :---: |
| Region 1: Long Island | 31 | 46 | 19 | 5 |
| Region 2: New York City | 32 | 49 | 15 | 4 |
| Region 3: Lower Hudson Valley | 24 | 49 | 23 | 5 |
| Region 4: Capital Region / <br> Northern Catskills | 22 | 49 | 24 |  |
| Region 5: Eastern Adirondacks / <br> Lake Champlain | 19 | 48 | 26 | 5 |
| Region 6: Western Adirondacks / <br> Eastern Lake Ontario | 20 | 45 | 27 | 7 |
| Region 7: Central New York | 18 | 51 | 27 | 8 |
| Region 8: Western Finger Lakes | 20 | 49 | 26 | 4 |
| Region 9: Western New York | 21 | 51 | 22 | 6 |
| Out of state | 24 | 49 | 21 | 7 |

| Table 32. Opinion on the Effect of Sale of Pumpkinseed, Bluegill, and Redbreast Sunfish, by Avidity |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Avidity Level | Is very harmful to <br> the fishery | Is somewhat <br> harmful to the <br> fishery | Is somewhat <br> beneficial to the <br> fishery | Is very beneficial <br> to the fishery |
| Consistent angler | 23 | 48 | 23 | 6 |
| Intermittent angler | 19 | 51 | 25 | 5 |

Consistent anglers are those who fished all 5 of the past 5 years; intermittent anglers are those who fished at least 1 year but not all 5 of the past 5 years.

Results regarding the opinion on the sale of yellow perch among those who fished for it or say it is their favorite species are shown in Table 33. Analogous results regarding the sale of pumpkinseed, bluegill, and redbreast sunfish among those anglers are shown in Table 34. Anglers who sold yellow perch or sunfishes in 2017 were much less concerned with the potential for fisheries impacts.

Table 33. Anglers' Opinions on the Sale of Yellow Perch Among Those Who Fished Specifically for Yellow Perch

| By fishing for yellow perch: | Fished for yellow perch in 2017 | Did not fish for yellow perch in 2017 |  |
| :---: | :---: | :---: | :---: |
| Very harmful | 28 | 25 |  |
| Very or somewhat harmful | 76 | 74 |  |
| Beneficial | 24 | 26 |  |
| By favorite species: | Favorite species is yellow perch | Favorite species is not yellow perch |  |
| Very harmful | 27 | 25 |  |
| Very or somewhat harmful | 78 | 74 |  |
| Beneficial | 23 | 26 |  |
| By fishing method used for yellow perch: | Ice fishing only for yellow perch | Open water only for yellow perch | Both ice and open water for yellow perch |
| Very harmful | 29 | 26 | 33 |
| Very or somewhat harmful | 76 | 78 | 72 |
| Beneficial | 25 | 22 | 29 |
| By selling of yellow perch, pumpkinseed, bluegill, or redbreast sunfish in 2017: | Sold yellow perch, pumpkinseed, bluegill, or redbreast sunfish in 2017 | Did not sell these fish in 2017 |  |
| Very harmful | 12 | 26 |  |
| Very or somewhat harmful | 43 | 74 |  |
| Beneficial | 57 | 26 |  |

These results are among those who fished for yellow perch in 2017 in New York.

| Table 34. Anglers' Opinions on the Sale of Pumpkinseed, Bluegill, and Redbreast Sunfish Among Panfish Anglers |  |  |  |
| :---: | :---: | :---: | :---: |
| By fishing for panfish: | Fished for panfish in 2017 | Did not fish for panfish in 2017 |  |
| Very harmful | 21 | 22 |  |
| Very or somewhat harmful | 69 | 71 |  |
| Beneficial | 31 | 29 |  |
| By favorite species: | Favorite species is a panfish | Favorite species is not a panfish |  |
| Very harmful | 22 | 22 |  |
| Very or somewhat harmful | 67 | 71 |  |
| Beneficial | 33 | 29 |  |
| By fishing method used for panfish: | Ice fishing only for panfish | Open water only for panfish | Both ice and open water for panfish |
| Very harmful | 28 | 20 | 27 |
| Very or somewhat harmful | 68 | 69 | 70 |
| Beneficial | 32 | 31 | 30 |
| By selling of yellow perch, pumpkinseed, bluegill, or redbreast sunfish in 2017: | Sold yellow perch, pumpkinseed, bluegill, or redbreast sunfish in 2017 | Did not sell these fish in 2017 |  |
| Very harmful | 10 | 22 |  |
| Very or somewhat harmful | 34 | 71 |  |
| Beneficial | 66 | 29 |  |

Panfish consist of bullhead, channel catfish, crappie/calico bass, pumpkinseed, bluegill, redbreast sunfish, rock bass, and yellow perch. These results are among those who fished for any type of panfish in 2017 in New York.

## ENCOURAGING FISHING PARTICIPATION

Given a list of actions that the Bureau could take to possibly encourage an increase in fishing activity, anglers most commonly chose having the Bureau provide better information on where to fish ( $21 \%$ chose this as the top action that could increase fishing participation) and increase the number of locations for fishing from the shore (also selected by 21\%), as shown in Figure 11. Providing additional information on current fishing opportunities and conditions (14\%), increasing the number of locations to launch a motorboat ( $11 \%$ ), and simplifying the fishing regulations ( $10 \%$ ) were also selected by substantial percentages. The survey asked anglers to select two actions, and Figure 12 shows the percentage who selected the actions as one of the top two.

Figure 11. Top Actions That Would Encourage Fishing Participation

Figure 12. Top Two Actions That Would Encourage Fishing Participation

## CHARACTERIZATION OF ANGLERS BY REGION OF RESIDENCE

## TERMINOLOGY FOR CHARACTERIZATION SECTION

Throughout this section, "license holders" refers to those who held a fishing license in any of the past 5 years (from 2013 to 2017).

## REGION 1 - LONG ISLAND

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: 75\%
- Approximate number who freshwater fished in the past 3 years: 20,902
- Percentage of license holders who fished in all 5 of the past 5 years: $46 \%$
- Approximate number who fished all 5 of the past 5 years: 12,702
- Percentage who listed a warmwater gamefish as their favorite to fish for: $59 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $28 \%$
- Percentage who listed a panfish as their favorite to fish for: $2 \%$
- Top species listed as their favorites: largemouth bass and smallmouth bass
- Percentage who think the sale of yellow perch is very harmful to the fishery: $33 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 79\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $21 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: $31 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: 76\%
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: $24 \%$

## REGION 2 - NEW YORK CITY

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: 79\%
- Approximate number who freshwater fished in the past 3 years: 26,189
- Percentage of license holders who fished in all 5 of the past 5 years: $39 \%$
- Approximate number who fished all 5 of the past 5 years: 13,032
- Percentage who listed a warmwater gamefish as their favorite to fish for: $38 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $40 \%$
- Percentage who listed a panfish as their favorite to fish for: $5 \%$
- Top two species listed as their favorites: largemouth bass and brown trout
- Percentage who think the sale of yellow perch is very harmful to the fishery: $33 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 81\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $19 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: $32 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: $81 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: $19 \%$

## REGION 3 - LOWER HUDSON VALLEY

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: $81 \%$
- Approximate number who freshwater fished in the past 3 years: 67,017
- Percentage of license holders who fished in all 5 of the past 5 years: $50 \%$
- Approximate number who fished all 5 of the past 5 years: 41,674
- Percentage who listed a warmwater gamefish as their favorite to fish for: $48 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $35 \%$
- Percentage who listed a panfish as their favorite to fish for: $4 \%$
- Top two species listed as their favorites: largemouth bass and brown trout
- Percentage who think the sale of yellow perch is very harmful to the fishery: $27 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 74\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $26 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: $24 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: $72 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: $28 \%$

## REGION 4 - CAPITAL REGION / NORTHERN CATSKILLS

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: $81 \%$
- Approximate number who freshwater fished in the past 3 years: 57,927
- Percentage of license holders who fished in all 5 of the past 5 years: $53 \%$
- Approximate number who fished all 5 of the past 5 years: 38,115
- Percentage who listed a warmwater gamefish as their favorite to fish for: $52 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $29 \%$
- Percentage who listed a panfish as their favorite to fish for: 7\%
- Top two species listed as their favorites: largemouth bass and smallmouth bass
- Percentage who think the sale of yellow perch is very harmful to the fishery: $25 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 73\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $27 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: $22 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: 71\%
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: 29\%

## REGION 5 - EASTERN ADIRONDACKS / LAKE CHAMPLAIN

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: 83\%
- Approximate number who freshwater fished in the past 3 years: 57,817
- Percentage of license holders who fished in all 5 of the past 5 years: $56 \%$
- Approximate number who fished all 5 of the past 5 years: 39,374
- Percentage who listed a warmwater gamefish as their favorite to fish for: $44 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $39 \%$
- Percentage who listed a panfish as their favorite to fish for: $9 \%$
- Top two species listed as their favorites: largemouth bass and brook trout
- Percentage who think the sale of yellow perch is very harmful to the fishery: $22 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 70\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $30 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: $19 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: $67 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: $33 \%$

## REGION 6 - WESTERN ADIRONDACKS / EASTERN LAKE ONTARIO

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: $84 \%$
- Approximate number who freshwater fished in the past 3 years: 60,676
- Percentage of license holders who fished in all 5 of the past 5 years: $57 \%$
- Approximate number who fished all 5 of the past 5 years: 41,290
- Percentage who listed a warmwater gamefish as their favorite to fish for: $57 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $27 \%$
- Percentage who listed a panfish as their favorite to fish for: $9 \%$
- Top two species listed as their favorites: smallmouth bass and largemouth bass
- Percentage who think the sale of yellow perch is very harmful to the fishery: $23 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 68\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $32 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: 20\%
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: $64 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: $36 \%$

## REGION 7 - CENTRAL NEW YORK

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: 83\%
- Approximate number who freshwater fished in the past 3 years: 95,859
- Percentage of license holders who fished in all 5 of the past 5 years: $55 \%$
- Approximate number who fished all 5 of the past 5 years: 63,496
- Percentage who listed a warmwater gamefish as their favorite to fish for: $56 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $22 \%$
- Percentage who listed a panfish as their favorite to fish for: $11 \%$
- Top two species listed as their favorites: largemouth bass and smallmouth bass
- Percentage who think the sale of yellow perch is very harmful to the fishery: $23 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 76\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $24 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: $18 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: $69 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: $31 \%$

## REGION 8 - WESTERN FINGER LAKES

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: $84 \%$
- Approximate number who freshwater fished in the past 3 years: 104,395 (this is the region with the most resident anglers)
- Percentage of license holders who fished in all 5 of the past 5 years: $55 \%$
- Approximate number who fished all 5 of the past 5 years: 68,217
- Percentage who listed a warmwater gamefish as their favorite to fish for: $51 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $26 \%$
- Percentage who listed a panfish as their favorite to fish for: $12 \%$
- Top two species listed as their favorites: largemouth bass and smallmouth bass
- Percentage who think the sale of yellow perch is very harmful to the fishery: $25 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 74\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $27 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: 20\%
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: $68 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: $32 \%$

## REGION 9 - WESTERN NEW YORK

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: $81 \%$
- Approximate number who freshwater fished in the past 3 years: 91,650
- Percentage of license holders who fished in all 5 of the past 5 years: $55 \%$
- Approximate number who fished all 5 of the past 5 years: 62,102
- Percentage who listed a warmwater gamefish as their favorite to fish for: $56 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $27 \%$
- Percentage who listed a panfish as their favorite to fish for: $8 \%$
- Top two species listed as their favorites: largemouth bass and smallmouth bass
- Percentage who think the sale of yellow perch is very harmful to the fishery: $27 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 75\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $25 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: $21 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: 71\%
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: 29\%

## OUT OF STATE

Among license holders who live in this region:

- Percentage of license holders who fished in New York waters in the past 3 years: $88 \%$
- Approximate number who freshwater fished in the past 3 years: 141,467
- Percentage of license holders who fished in all 5 of the past 5 years: $38 \%$
- Approximate number who fished all 5 of the past 5 years: 61,886
- Percentage who listed a warmwater gamefish as their favorite to fish for: $41 \%$
- Percentage who listed a coldwater gamefish as their favorite to fish for: $52 \%$
- Percentage who listed a panfish as their favorite to fish for: $3 \%$
- Top two species listed as their favorites: smallmouth bass and largemouth bass
- Percentage who think the sale of yellow perch is very harmful to the fishery: $27 \%$
- Percentage who think the sale of yellow perch is very or somewhat harmful to the fishery: 76\%
- Percentage who think the sale of yellow perch is beneficial to the fishery: $24 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very harmful to the fishery: $24 \%$
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is very or somewhat harmful to the fishery: 73\%
- Percentage who think the sale of pumpkinseed, bluegill, and/or redbreast sunfish is beneficial to the fishery: $27 \%$

## LITERATURE CITED

Connelly, N.A., and T.L. Brown. 2009. New York Statewide Angler Survey 2007, Report 4: Survey Method Comparison and Analysis of Trends in Fishing Effort. New York State Department of Environmental Conservation, Bureau of Fisheries, Albany, NY.

## ABOUT RESPONSIVE MANAGEMENT

Responsive Management is an internationally recognized survey research firm specializing in natural resource and outdoor recreation issues. Our mission is to help natural resource and outdoor recreation agencies, businesses, and organizations better understand and work with their constituents, customers, and the public.
Focusing only on natural resource and outdoor recreation issues, Responsive Management has conducted telephone, mail, and online surveys, as well as multi-modal surveys, on-site intercepts, focus groups, public meetings, personal interviews, needs assessments, program evaluations, marketing and communication plans, and other forms of human dimensions research measuring how people relate to the natural world for more than 30 years. Utilizing our in-house, full-service survey facilities with 75 professional interviewers, we have conducted studies in all 50 states and 15 countries worldwide, totaling more than 1,000 human dimensions projects and almost $\$ 70$ million in research only on natural resource and outdoor recreation issues.

Responsive Management has conducted research for every state fish and wildlife agency and every federal natural resource agency, including the U.S. Fish and Wildlife Service, the National Park Service, the U.S. Forest Service, Bureau of Land Management, U.S. Coast Guard, and the National Marine Fisheries Service. Additionally, we have also provided research for all the major conservation NGOs including the Archery Trade Association, the American Sportfishing Association, the Association of Fish and Wildlife Agencies, Dallas Safari Club, Ducks Unlimited, Environmental Defense Fund, the Izaak Walton League of America, the National Rifle Association, the National Shooting Sports Foundation, the National Wildlife Federation, the Recreational Boating and Fishing Foundation, the Rocky Mountain Elk Foundation, Safari Club International, the Sierra Club, Trout Unlimited, and the Wildlife Management Institute. Other nonprofit and NGO clients include the American Museum of Natural History, the BoatUS Foundation, the National Association of Conservation Law Enforcement Chiefs, the National Association of State Boating Law Administrators, and the Ocean Conservancy. As well, Responsive Management conducts market research and product testing for numerous outdoor recreation manufacturers and industry leaders, such as Winchester Ammunition, Vista Outdoor (whose brands include Federal Premium, CamelBak, Bushnell, Primos, and more), Trijicon, Yamaha, and others.
Responsive Management also provides data collection for the nation's top universities, including Auburn University, Clemson University, Colorado State University, Duke University, George Mason University, Michigan State University, Mississippi State University, North Carolina State University, Oregon State University, Penn State University, Rutgers University, Stanford University, Texas Tech, University of California-Davis, University of Florida, University of Montana, University of New Hampshire, University of Southern California, Virginia Tech, West Virginia University, Yale University, and many more.

Our research has been upheld in U.S. Courts, used in peer-reviewed journals, and presented at major wildlife and natural resource conferences around the world. Responsive Management's research has also been featured in many of the nation's top media, including Newsweek, The Wall Street Journal, The New York Times, CNN, National Public Radio, and on the front pages of The Washington Post and USA Today.

Visit the Responsive Management website at www.responsivemanagement.com

[^0]:    Warmwater gamefish include largemouth and smallmouth bass, muskie, northern pike, pickerel, tiger muskie, and walleye.

    Coldwater gamefish include coho/Chinook salmon, lake trout, landlocked Atlantic salmon, steelhead, and brown, brook, and rainbow trout.

    Panfish include bluegill, sunfish, bullhead, catfish, crappie, and yellow perch.
    Striped bass and carp are categorized individually in this analysis.
