Help **STOP** the Spread of Aquatic Invasive Species and Fish Diseases

Fish diseases such as Viral Hemorrhagic Septicemia (VHS) and invasive species such as the zebra mussel and Eurasian water milfoil can be spread through the use of boating and fishing equipment that has not been properly cleaned, dried or disinfected prior to its use in another waterbody. Help stop the spread of these noxious species and diseases by adhering to the following simple guidelines.

1

INSPECT your boat, trailer and other fishing and boating equipment and remove all mud, plants and other organisms that might be clinging to it. Never release plants, fish or animals into a body of water, unless they came out of that body of water.

DRAIN AND DRY everything that came into contact with water. Many aquatic invasive species and fish diseases are microscopic and can be transported in as little as a drop of water. Dry equipment for at least 48 hrs before using it in another waterbody. Difficult to dry gear, may require even longer drying times. Be sure to completely drain your boat, including baitwells and livewells.

ACTIVE INGREDIENTS	
Alkyl (C12 40%; C14 50%; C16 10%)	
dimethyl benzyl ammonium chloride	0.3%
OTHER INGREDIENTS	
	99.7%

DISINFECT equipment if you cannot or do not have the time to dry it before using it in another waterbody. Effective disinfectants include water over 140° F (hotter than most tap water), 2% bleach solution (3 ounces of household bleach mixed with 1 gallon of water), or household cleansers such as Fantastik®, Formula 409®, or Spray Nine® that contain the ingredient alkyl dimethyl benzyl ammonium chloride. For all materials, follow label instructions and be sure to soak equipment for a minimum of 10 minutes. Dispose of all cleaning/disinfectant solutions away from surface waters in accordance with label restrictions. For additional information, contact your local DEC office.

This guide provides information to help you use and enjoy the more than 500 public boating access sites in New York State. It is organized by county. Large waters that reside in more than one county are listed separately at the end of the county listings.

Each listing contains the following information:

Name of Waterbody- (SW) indicates a site in the marine district.

Driving directions

Ramp type

- Hard surface/concrete ramp - float-off and float-on launching for most trailered boats.
- Beach launch - informal trailered boat launching designed for small, light boats. Typically do not have designated trailer parking locations.
- Hand launch - no trailer capacity. Boats must be hand carried to the water.
- Car top launch - for hand launching of car top boats, canoes & kayaks.
Note that car-only parking is limited at most boat launches.

How to Trailer and Launch your Boat

Check the following to ensure a safe and proper tow:

- Make sure your boat and trailer are properly registered, inspected and insured.
- Properly load and balance the boat on the trailer.
- Check to see that all tie downs are in place and tight.
- Place outboard or outdrive in trailering position and make sure transom is properly supported on the trailer (use a motor support, if necessary).

- Distribute the weight of gear in the boat evenly over the axle(s) with heavier gear down low. Secure it from shifting.
- Ensure the hitch is the right weight class for the boat and trailer and that the hitch ball diameter matches the trailer coupler.
- Hitch the trailer to the tow vehicle.
- Make sure that the coupler is properly engaged and secured on the hitch ball.
- Connect trailer safety chains in a crisscross pattern to the hitch on the vehicle.
- Plug in the electrical connector and test all lights.
- Check tires for wear and correct pressure.
- Make sure the wheel bearings are freshly greased.
- Test the trailer brakes (if available).

Choosing the Right Trailer:

Generally the size and type of trailer is determined by the length, beam and weight of the boat. Some trailers have rollers that allow for the boat to be easily winched onto the trailer. Others have bunks designed for the boat to be floated or driven onto the trailer. The data plate or sticker, usually located on the tongue of the trailer, will display its load capacity and what size tires the trailer uses. Make sure that the combined weight of the boat, motor and equipment never exceeds the rated trailer capacity.

Launching a Boat:

These launching procedures are designed for improved ramps with the appropriate slope and boarding docks necessary for the safe launching of boats. Procedures will need to be modified for other launching situations. Always be aware of the capabilities of your tow vehicle and do not put it in a situation that will result in difficulties hauling the boat and trailer back out of the water.

1. Preparation (away from ramp, use staging area if available)

- Load boat.
- Remove all tie downs, but make sure winch cable remains attached.
- Unplug the trailer electrical connection.
- Make sure drain plug is in and secure.
- Attach a line to the bow and stern (if necessary).
- Perform applicable checks from boat operation checklist.
- For an inboard or I/O, turn on the blower to evacuate any gas vapors.

2. *Approaching the ramp*

- Ensure the ramp area is clear
- Back trailer into water until boat is almost able to float off trailer. Rear tires of trailering vehicle should just be entering the water.
- Put the transmission in “Park” and set the parking brake. If necessary, put chocks behind the rear wheels of the vehicle.

3. *Launching Your Boat (2 people)*

- Lower the engine or outdrive.
- With one person on the boat and one at the winch, start releasing the winch.
- If the blower on inboards or I/O's has been running for at least 4 minutes, double check for vapors and start the engine.
- Ensure that water is passing through the cooling system.
- Continue releasing the winch and let the boat roll off the trailer or back the boat into the water.
- Secure the boat to the boarding dock.

(1 person)

One person launching typically requires an individual to step into the water. Appropriate footwear (waders/ hip-boots, or water shoes & shorts are recommended). Be aware that ramps can be slippery.

- Grab hold of the bow line and release the winch cable.
- Push the boat off of the trailer.
- Secure the boat to the boarding dock.

Clear your vehicle from the ramp as soon as the boat is secure.

4. *Retrieving Your Boat*

- Secure your boat to the boarding dock.
 - Get tow vehicle and back trailer to the approximate depth used to launch boat. Particularly for one person retrieval efforts, having the trailer close to the boarding dock makes retrieval simpler.
 - Guide boat onto trailer and either drive or winch boat onto it. Be aware of depth at ramp and raise motor if necessary.
 - Winch boat onto trailer until bow is tight to the bow stop. Secure winch cable and attach safety chain.
 - Move boat away from ramp to staging area or other available space
 - Check trailer boat and motor for any clinging plants or other organisms and debris and dispose of in designated receptacle or upland area.
- Remove boat plug and drain boat.
- Load tow vehicle, reconnect trailer lights and secure all tie down straps.

Ramp Courtesy

Busy launch ramps can be a source of aggravation and friction between boaters, as everyone wants to get on or off the water as soon as possible to begin or end their boating excursion. Most problems at the ramp can be resolved if boaters are courteous to others. Prepare your boat for launching before pulling into the ramp area, loading as much of your gear as possible at home or before you launch your boat. Clear the ramp as quickly as possible when launching or retrieving your boat, so the next boater can approach. Be careful not to block others from launching if the ramp is designed to launch more than one boat at a time. The launch site is not the place to learn how to back your trailer. Practice before you ever get to the launch ramp. If there is a line, wait your turn, patiently and cheerfully. Offer to help the boater ahead of you if it appears they need and want the help.

Be a Safe and Courteous Boater

Safe and courteous boaters are aware that their boat can be as dangerous as the car they drive. They also understand that their actions can impact others using the body of water they are boating on. Always maintain a safe speed and be conscious of the impact your boat's wake can have on other boaters. If passing a small boat, canoe or kayak, SLOW DOWN, to avoid a wake that can capsize such a vessel. If you come upon a boat with people fishing, avoid disturbing the water they are fishing by slowing down, giving them a wide berth and, if possible, avoid passing between their boat and the shoreline they are fishing.
