FISH CONSUMPTION ADVISORY

Fish are nutritious and good to eat. When properly prepared, fish provide a diet high in protein and low in saturated fats. Some fish, however, absorb contaminants from the water in which they live and from the food they eat. Over time, some of these contaminants accumulate in the fish, and likewise in the people who eat these fish. These contaminants can harm you, so it is important to keep your exposure as low as possible. Guidelines prepared by government agencies are not intended to discourage people from eating fish, but anglers should consider them when preparing and eating legal fish taken from New York waters.

The federal government sets standards for chemicals in food sold commercially, including fish. The DEC routinely monitors contaminant levels in fish. The NYS Department of Health (NYSDOH) issues advisories when sportfish contaminant levels exceed federal standards. These advisories should guide you in making wise decisions on the type and amount of fish to eat to minimize your exposure to contaminants. NYSDOH issues both general and specific health advisories for eating fish from New York waters. The health advisory for consumption of fish from New York City's surrounding marine waters is to eat no more than one meal (1/2 pound) per month. NYC's surrounding marine waters include the Hudson River, Arthur Kill, Kill Van Kull, East River, Harlem River, and the Upper Bay of NY Harbor (north of the Verrazano Narrows Bridge). Infants, children under the age of 15, and women of childbearing age are advised to **eat no fish** from NYC's surrounding marine waters.

For more information on specific consumption advisories, please contact NYS Department of Health:
