

Here's how to help **STOP THE SPREAD** of insect pests:

- ❖ Leave firewood at home—do not transport it to campgrounds or parks.
- ❖ Use only firewood from local sources. “Local” means from less than 50 miles. Firewood is commonly available at or near most campgrounds. It's a small price to pay to save the trees in your favorite campground.
- ❖ If you have moved firewood, burn ALL of it before leaving your campsite. Do not carry firewood from one campground to another.
