TMDL/303d Status: n/a

Resolution Potential: n/a

Further Details

A biological (macroinvertebrate) assessment of Camp Creek near Osceola, PA, (off Route 127) was conducted in 2002. Field sampling results indicated non-impacted water quality conditions. The fauna was diverse and all screening criteria for waters having no known impacts were met. (DEC/DOW, BWAM/SBU, June 2005)

Camp Creek is just one of several streams that make up this waterbody segment, but it is considered representative of water quality in the segment as a whole. This segment is listed as being evaluated rather than monitored.

This segment includes the total length of selected/smaller tribs to Pa (between the Tioga River and Troups Creek). Tribs within this segment, including Mapes Creek (-11), Strait Creek (-13), Camp Brook (-18), Holden Creek (-19), Redhouse Hollow Brook (-19a) and Buckley Brook (-20), are Class C. Troups Creek (Pa 25) is listed separately.

Minor Tribs to Pennsylvania (0503-0037)

UnAssessed
