

Figure 7. Core use area (50% kernel home range polygons) for 1 double-crested cormorant which abandoned Little Galloo Island (LGI), Lake Ontario, New York during egg-oiling treatments. Bird 28 moved approximately 570 km to Middle Island, Lake Erie and remained there long enough to potentially fledge young before migrating (18 June – 2 October 2001). Green stars represent known colony sites, red stars represent NYSDEC control sites.
