Dear Jason,

Enclosed is one electronic PDF copy of the 2022 Annual Summary Report for the BPGWCS operation and monitoring, performed in accordance with the NYSDEC-approved OU3 Groundwater IRM OM&M Manual (Arcadis 2009) and the NYSDEC-approved Sampling and Analysis Plan (SAP; Arcadis 2009). As we have transitioned to electronic submittals (via PDF) in line with NYSDEC's paper reduction program, hard copies of the report can be provided on request.

If you have any questions, please do not hesitate to contact me.

Sincerely,
Arcadis of New York, Inc.

Christopher Engler, PE New York PE-069748

1 Introduction

Pursuant to the Administrative Order on Consent (AOC) Index #W1-0018-04-01 (New York State Department of Environmental Conservation [NYSDEC] 2005) and the Operable Unit 3 (OU3) Record of Decision (ROD) (NYSDEC 2013), Arcadis of New York, Inc. (Arcadis), on behalf of Northrop Grumman, has prepared this OU3 Bethpage Park Groundwater Containment System (BPGWCS) Annual Summary Report for submittal to the NYSDEC. The present-day Bethpage Community Park property (Park), McKay Field Access Road, and Former Plant 24 Access Road, which the NYSDEC has termed the "Former Grumman Settling Ponds Area" and designated as OU3, are referred to herein as the Site Area. **Figure 1** provides a Site Location map.

The BPGWCS (previously referred to as the Groundwater Interim Remedial Measure and also known as the OU3 On-site Containment [ONCT] system) has been operational since July 21, 2009. The operation, maintenance, and monitoring (OM&M) activities performed during 2022 (i.e., January 1 through December 31, 2022 [the "annual reporting period"]) are summarized in this Annual Summary Report. Data summaries for the previous three 2022 quarterly operational periods are available in the following letter reports:

- Results of First Quarter 2022 System Operation and Monitoring for the Bethpage Park Groundwater Containment System, May 2022 (Arcadis 2021a)
- Results of Second Quarter 2022 System Operation and Monitoring for the Bethpage Park Groundwater Containment System, August 2022 (Arcadis 2021b)
- Results of Third Quarter 2022 System Operation and Monitoring for the Bethpage Park Groundwater Containment System, November 2022 (Arcadis 2021c)

During the annual reporting period, the BPGWCS Remedial System was operated and the Environmental Effectiveness Monitoring Programs were conducted in accordance with the OU3 BPGWCS Groundwater Operation, Maintenance, and Monitoring Manual (OM&M Manual; Arcadis 2016).

As discussed in the OU3 Site Area Remedial Investigation Report (Site Area RI) (Arcadis 2011), Northrop Grumman does not take responsibility for certain compounds (e.g., Freon 12 and Freon 22) present in Site Area groundwater. Throughout this Annual Report, a distinction is made between "Project" and "Non-Project" volatile organic compounds (VOCs), defined as follows:

- Project VOCs: VOCs that may be related to former Northrop Grumman historical activities. For this OM&M Report, Project VOCs include 1,1,1-trichloroethane; 1,1-dichloroethane; 1,2-dichloroethane; 1,1-dichloroethene; tetrachloroethene; trichloroethylene (TCE); vinyl chloride (VC); cis-1,2-dichloroethene (cis-1,2-DCE); trans-1,2-dichloroethene (trans-1,2-DCE); benzene; toluene; xylene-O, and xylenes-M,P.
- Non-Project VOCs: VOCs, such as Chloroform, Freon 12 and Freon 22, that are understood to be unrelated to former Northrop Grumman activities but have been detected in Site Area groundwater. As noted in the Site Area RI (Arcadis 2011), a sub-plume of Freon 22 has been identified originating from the area of the Town of Oyster Bay's (Town) former ice rink. Based on Town information (Zervos 2007), Freon 22 was used by the Town and released to the environment.

2 Bethpage Park Groundwater Containment System Objectives

Remedial action objectives (RAOs) for the BPGWCS are as follows:

- Mitigate the off-site migration of dissolved-phase VOCs in groundwater. Specifically, the BPGWCS was designed to address:
 - Groundwater that has total VOC concentrations greater than 5 micrograms per liter ($\mu\text{g}/\text{L}$) in the upper 20 feet of the surficial aquifer across the 1,200-foot-wide lateral extent of the Site Area southern boundary.
 - Groundwater below the upper 20 feet of the surficial aquifer that has total VOC concentrations greater than 50 $\mu\text{g}/\text{L}$ across the 1,200-foot-wide lateral extent of the Site Area southern boundary.
- Comply with applicable NYSDEC standards, criteria, and guidance values (SCGs) for treated water and air emissions.

A secondary benefit of the BPGWCS is the creation of a clean-waterfront atop downgradient groundwater, which minimizes the potential for vapor intrusion downgradient of the Site Area.

3 Bethpage Park Groundwater Containment System Description

The BPGWCS consists of:

- A pump-and-treat system where groundwater is:
 - Extracted along the Former Plant 24 Access Road via six remedial wells.
 - Conveyed to a treatment plant at McKay Field via four underground pipelines.
 - Treated via air stripping to reduce concentrations of Project and Non-Project VOCs to comply with applicable NYSDEC SCGs, including SPDES discharge requirements for treated water.
 - Filtered to remove oxidized metals to comply with applicable NYSDEC SCGs for treated water.
 - Returned to the aquifer via a discharge pipeline routed to a recharge basin located on the adjacent former Bethpage Naval Weapons Industrial Reserve Plant (NWIRP) property.
- A vapor-phase treatment system that reduces concentrations of Project VOCs to below AGCs/SGCs in the air stripper off-gas prior to discharge to the atmosphere.
- A groundwater monitoring network utilized to periodically assess the environmental effectiveness of the BPGWCS.

Major components of the BPGWCS are as follows:

- Four remedial wells (RW-1, RW-2, RW-3, and RW-4) with design pumping rates of 30 gallons per minute (gpm), 75 gpm, 75 gpm, and 30 gpm, respectively; for a total design influent flow rate of 210 gpm.
- On August 4, 2022 Monitoring Wells BCPMW-4-1 and BCPMW-4-2 were repurposed to serve as additional recovery wells; water extracted by these wells is conveyed (by pipeline) to the existing RW-1 well pipeline,

which then flows to the treatment system. The pumping rate of RW-1 was reduced to 14 gpm to accommodate the pumping rates of BCPMW-4-1 and BCPMW-4-2, which are 3 gpm and 13 gpm respectively. These three wells have a combined design pumping rate of 30 gpm.

- One low-profile air stripper to remove VOCs from extracted groundwater prior to discharge to the recharge basin.
- Two bag filter units configured so that one is operational, and the other is in standby mode. The system control logic automatically switches from the operational filter unit to the standby filter unit when the pressure differential between the influent and effluent sides of the operational bag filter reaches a pre-set limit to prevent a system shutdown and the spent filters are then replaced.
- Four emission control units operating in series, with the first three containing vapor-phase granular-activated carbon and the last unit containing potassium permanganate-impregnated zeolite, to treat Project VOCs in the air stripper off-gas.
- A groundwater monitoring network, consisting of 47 monitoring locations, including 23 groundwater monitoring wells, six remedial wells, and 20 piezometers.

Figure 2 shows the layout of the BPGWCS, and **Figure 3** provides a schematic drawing of the remedial systems. **Figure 4** shows groundwater sampling locations that form the groundwater monitoring network. **Appendix A** provides construction details for the monitoring wells and piezometers. The latest version of the OM&M Manual (Arcadis 2016) provides additional information.

4 Operation and Maintenance Activities

4.1 Annual System Performance and Alarm Summary

The 2022 system operational up-time is documented in **Table 1** and summarized below along with BPGWCS shutdowns that occurred in 2022.

In 2022:

- The system operated 344 out of 365 days (94% uptime), which is about the same as the 95% runtime observed in 2021.
- The remedial wells operated at reduced flow rates during portions of the year due to pump wear attributed to iron build-up in the pumps, influent pipelines and valves. The reduced flow rates were corrected by adjusting the manifold globe valves or through the performance of periodic system maintenance (i.e., pulling and replacing the remedial well pumps and valve cleaning).
- There were 16 non-routine system shutdowns (less than 12 hours each) due to alarm conditions encountered during normal operation of the system. Alarms in this category were responded to and troubleshooting was completed to restart the system within the same day (less than 12 hours).
- The following seven (7) non-routine system shutdowns resulted in downtime period greater than 12 hours each, of which:
 - 22-hour shutdown from 3/28/22 – 3/29/22 due to a system reset following the E-Stop being triggered.

- 34.5-hour shutdown from 4/30/22 – 5/2/22 due to the building sump high level alarm. The sump alarms were adjusted to resolve the issue.
- 34-hour shutdown from 5/14/22 – 5/16/22 due to a loss of power.
- 53.5-hour shutdown from 5/18/22 – 5/20/22 due to high pressure alarms.
- 122.5-hour reduced flowrate operation from 5/20/22 – 5/25/22 due to maintenance on RW-1 and RW- 4, and the conversion of BCPMW-4-1 and BCPMW-4-2 as recovery wells.
- 32-hour shutdown from 7/21/22 – 7/22/22 due to power loss.
- 21-hour shutdown from 8/5/22 to 8/6/22 due to high water level alarms.

5 System Monitoring Activities

5.1 2022 System Monitoring Activities

The following compliance and performance monitoring activities were conducted during the annual reporting period (see Section 6 of the OM&M Manual for a summary of the compliance and performance monitoring program requirements):

- Fourteen (14) sampling events to collect 42 required water samples (WSP-1 through WSP-5 on a quarterly basis and WSP-7 on a monthly basis) and 10 air samples (influent and effluent on a quarterly basis). Additional water samples (WSP-1 through WSP-7) and air samples (influent and effluent) were collected on a monthly basis during the first quarter due to an increase in TVOC concentration observed in August 2021 in RW-2.
- As of August 8, 2022 WSP-1 includes contributions from new recovery wells BCPMW-4-1 and BCPMW-4-2. Samples collected from remedial wells BCPMW-4-1 and BCPMW-4-2 have been previously provided in monthly progress reports.

Thirty-six (36) weekly site visits to monitor and record key system operational parameters. System O&M results for the annual reporting period are summarized in the following tables and figures:

- Operational Summary, including monitoring events, system operational days, and noteworthy site activities (**Table 1**).
- Summary of Influent and Effluent Water Sample Analytical Results (**Tables 2** and **3**, respectively) – **Table 3** also provides the BPGWCS treatment system removal efficiency.
- Summary of Influent and Effluent Vapor Sample Analytical Results and Summary of Effluent Vapor Tentatively Identified Compounds (**Tables 4**, **5** and **6**, respectively) – **Table 5** also provides the BPGWCS treatment system removal efficiency.
- Summary of System Parameters, including flow rates, line pressures, and temperatures (**Table 7**).
- Summary of Groundwater Recovered, VOC Mass Recovered, and VOC Mass Recovery Rates (**Table 8**) – **Table 8** provides a breakdown of these parameters by Remedial Well and System and breaks down the VOC mass recovered and VOC recovery rates into Project, Non-Project, and total VOCs.
- Cumulative Total, Project, and Non-Project VOC Mass Removed (**Figure 5**).

- Remedial Well Total, Project, and Non-Project VOC Concentrations (**Figures 6A, 6B, and 6C**, respectively).
- Influent Total, Project, and Non-Project VOC Concentrations (**Figure 7**); and,
- Total, Project, and Non-Project VOC Mass Recovery Rates (**Figures 8A, 8B, and 8C**, respectively).

5.2 Summary of Monitoring Results and Conclusions

5.2.1 System Operation and Effectiveness

Annual BPGWCS monitoring results and conclusions are summarized below:

- Total volume of groundwater recovered and treated (**Table 8**):
 - 2022 Annual Total: 102 million gallons
 - Cumulative total since system startup: 1.4 billion gallons
- Total VOC mass recovered (**Table 8**):
 - 2022 Annual Total: 112.3 lbs of VOCs
 - Cumulative total since system startup: 2,506 lbs of VOCs
- VOC mass recovered and mass removal rates (**Table 8** and **Figures 8A, 8B, and 8C**):
 - The majority of VOCs recovered during the annual reporting period were Project VOCs (96 percent or 107.6 lbs).
 - The majority of Project VOCs were recovered by RW-2 (48 percent or 51.2 lbs).
- The majority of Non-Project VOCs were recovered by RW-1 (35 percent or 1.7 lbs).
- Treatment system influent concentrations (**Table 2**, and **Figures 6A, 6B, 6C, and 7**):
 - During the annual reporting period, total Project VOC influent concentrations increased from 82.6 µg/L in January to 387.7 µg/L in August. Total Project VOC concentrations decreased to 109.9 ug/l in November.
 - A similar increase and subsequent decrease was observed in total Non-Project VOCs. Influent concentrations ranged from 3.2 µg/L in January to 18.8 µg/L in August. Total Non-Project VOC concentrations decreased to 2.9 ug/l in November. These concentrations were below the peak concentration observed in 2014 (55 µg/L). Total Non-Project VOC influent concentrations have generally decreased since 2010.
- Total iron detected during the annual reporting period ranged from 174 µg/L to 767 µg/L-**Table 3**). On August 17, 2022, an increased total iron concentration of 767 µg/L was observed in the effluent sample. This is likely due to the addition of BCPMW-4-1 and BCPMW-4-2 recovery wells to the system on August 4, 2022, and samples collected after August 4, 2022 decreased in total iron concentration to below the SPDES limit. Iron concentrations have since decreased and have been consistent with historical values.
- Project VOC Concentrations in Remedial Wells (**Table 10**):
 - For RW-1, there was a notable increase in total project VOC concentrations in August to 1,550.5 µg/l. This is most likely due to the addition of new Recovery Wells BCPMW-4-1 and BCPMW-4-2 to the RW-1

influent. The concentrations for RW-1 decreased in the November sample to 461.1 µg/l. This situation will be closely monitored.

- In RW-2, total Project VOC concentrations decreased from a high of 276.4 µg/l in February to 40.9 ug/l in November to.
- In RW-3, t total Project VOC concentrations ranged from 32.8 µg/l in May to 54.5 µg/l in February.
- In RW-4, one Project VOC (TCE) was detected in the first and fourth quarters, but the detections were below the applicable SCG, and no VOCs were detected during the second and third quarters.
- In RW-1, non-Project VOC concentrations ranged from non-detect in the first and second quarters to 65.2 µg/l in August. The concentrations decreased to 13.2 µg/l in November. In RW-2, non-Project VOC concentrations ranged from non detect in November to 2.9 µg/l in May. In RW-3, non-Project VOC concentrations ranged from 2.3 µg/l in November to 10.2 µg/l in February. In RW-4, non-Project VOC concentrations ranged from not detected in August to 2.5 µg/l in May.
- The air stripper, air stripper off-gas treatment system, and bag filter system performed within acceptable operating ranges during the annual reporting period, as indicated by:
 - The air stripper VOC removal efficiency was greater than 99.9 percent for Project and Non-Project VOCs (**Table 3**).
 - Both water and air discharges complied with applicable SCGs and discharge limits (**Tables 3, and 9**) except for the water effluent sample collected in August which showed a total iron concentration above the SPDES limit, however, the total iron concentrations have since decreased and are within applicable discharge limits.

5.2.2 Regulatory Status of Discharges

5.2.2.1 Air Discharges

Facility-wide emissions were evaluated for the reporting period to determine compliance with DAR-1 Guideline for The Evaluation and Control of Ambient Air Contaminants Under 6 CRR-NY 212 (Rule 212). Three different emission point sources, that operated for different durations throughout the reporting period, are included in the facility-wide emission sources. These emission sources included:

- OU3 Bethpage Park Groundwater Containment System (BPGWCS) which operated for the entire reporting period.
- OU3 Bethpage Park Soil Gas Containment System (BPSGCS) which operated from May 18, 2022 through December 31, 2022 of the reporting period.
- Combined BPSGCS and ISTR which operated from January 1, 2022 throughout May 18, 2022 of the reporting period.

Pursuant to 6 CRR-NY 212-2.1, for an air contaminant listed in section 212-2.2 table 2 – high toxicity air contaminant (HTAC) list, the facility owner or operator shall either limit the actual annual emissions from all process operations at the facility so as to not exceed the mass emission limit listed for the individual HTAC; or demonstrate compliance with the air cleaning requirements for the HTAC as specified in subdivision 212-2.3(b), table 4 – degree of air cleaning required for non-criteria air contaminants, of this Subpart for the environmental

rating assigned to the contaminant by the department. For each non-HTAC air contaminant, dispersion modeling will not be required if the actual annual emission rate is less than 100 pounds per year facility-wide. Actual annual emission rates used for comparison can take control devices into account and must meet the provisions of 212-1.5(g). Emission source specific and facility-wide emission rates were calculated for the detected constituents for the reporting period and are summarized in Table 9. All detected compounds were below the compound specific mass emission limit for the reporting period and therefore, no further analysis was required.

Based on **Table 9** the facility-wide effluent air discharge for the annual reporting period meets the requirements of Rule 212.

5.2.2.2 Water Discharges

The BPGWCS-treated water effluent met NYSDEC regulatory requirements during the annual reporting period (Table 3 and Appendix B), as noted below:

- The measured concentration of individual VOCs in the treated water effluent were below applicable discharge limits, per the interim State Pollutant Discharge Elimination System (SPDES) equivalency permit dated October 12, 2017, and as amended on September 15, 2022.
- The measured concentrations of total and dissolved iron in the treated water effluent were below applicable SPDES discharge limits except for the August sample which showed a total iron concentration above the SPDES limit, however, the total iron concentrations have since decreased and are within applicable discharge limits.

6 Environmental Effectiveness Monitoring

The OU3 BPGWCS System environmental effectiveness (i.e., hydraulic monitoring and groundwater quality monitoring) activities and results for the annual reporting period are discussed below.

6.1 Hydraulic Monitoring

6.1.1 Activities

In accordance with the OM&M Manual requirements and methodologies (Arcadis 2016), groundwater hydraulic monitoring was performed quarterly during the annual reporting period. Specifically, depth-to-water measurements were completed on March 15-16, June 13, September 6, and November 22, 2022. In March and June, the depth to water measurements were completed at the 43 monitoring wells/piezometers and 4 remedial wells forming the approved monitoring well network (Figure 4). In September and November, the depth to water measurements were completed at the 41 monitoring wells/piezometers and 6 remedial wells following the addition of BCPMW-4-1 and BCPMW-4-2 as recovery wells, forming the approved monitoring well network (Figure 4).

Table 11 summarizes results of depth-to-water measurements to date.

6.1.2 Results

Figure 9 provides the configuration of the shallow potentiometric surface and the inferred horizontal groundwater flow directions on September 6, 2022 (3rd quarter) at the Site Area. Comparing third quarter water-level elevations

from 2022 to those from 2021 reveal that the shallow potentiometric surface was approximately 2.5 feet lower at the time water level elevations were recorded in 2022 as compared to 2021.

Groundwater hydraulic monitoring is conducted quarterly; however, the shallow potentiometric surface is mapped for one quarter each year as the rise and fall of this surface seasonally, due to recharge or lack thereof, has a negligible effect on the capture zone. As **Figure 9** shows, groundwater flow in the area is generally toward the south/southeast north of the remedial wells. The BPGWCS system is capturing groundwater from beneath the entire Bethpage Community Park. The southern edge of the capture zone (groundwater divide) extends to the south of Monitoring Wells MW-204-1, MW-205-1 and MW-206-1 and is generally along Sycamore Avenue and slightly south of Monitoring Wells MW-200-1 through MW-202-1.

Figure 10 provides a cross-sectional view of vertical groundwater flow (based on groundwater levels measured on September 6, 2022), and Project VOC concentrations in groundwater (based on results from the July/August 2022 annual groundwater sampling round). **Figure 10** indicates groundwater containing Project VOCs is being captured and removed by the remedial wells (at all depths), which exceeds the RAOs for the OU3 BPGWCS System.

Figure 9 in combination with **Figure 10** indicate that the OU3 BPGWCS System provides effective vertical and horizontal hydraulic control of groundwater containing Project VOCs and prevents its movement offsite.

6.2 Groundwater Quality Monitoring

6.2.1 Activities

An annual groundwater sampling round was performed in July and August 2022 as part of site-wide sampling activity. Groundwater samples were collected from 19 monitoring wells that are specified for sampling in the OM&M Manual (Arcadis 2016). Additionally, in response to elevated VOC concentrations observed in wells BCPMW-4-2 and RW-2 in late 2021 and early 2022 a sampling program was initiated in March 2022 increasing the frequency of sampling wells in the area of BCPMW-4-1 and BCPMW-4-2

6.2.2 Results

Groundwater samples collected from the 19 monitoring wells were analyzed for Target Compound List (TCL) VOCs, plus Freon 12 and Freon 22, using USEPA Method 8260C, 1,4-Dioxane using USEPA Method 8270D SIM and total (unfiltered) and dissolved (filtered) metals (cadmium and chromium) using USEPA Method 6010. Samples collected as part of the BCPMW-4-1/4-2 area investigation were analyzed for Target Compound List (TCL) VOCs, plus Freon 12 and Freon 22, using USEPA Method 8260C.

Groundwater quality data, including historical results to date, are summarized in **Table 12** (for VOCs and 1,4-Dioxane) and **Table 13** (for metals).

Except as described below, total Project and Non-Project VOCs concentrations in samples collected from the 19 monitoring wells during the July/August 2022 annual sampling event have been consistent with previous historical results and did not show notable increases during 2022. Similar to the increase in VOC concentrations observed in RW-2 in August 2021, TVOC concentrations in monitoring well BCPMW-4-2, located approximately 85 feet west of RW-2, had also increased from 100 ug/L on July 20, 2020 to 1,700 ug/L on August 2, 2021. In response to this increase in TVOC concentrations in BCPMW-4-2, groundwater samples were collected from BCPMW-4-1, BCPMW-4-2, PZ 1A, PZ-3, PZ-4 in May and July 2022 and elevated concentrations were detected in BCPMW-4-

2022 Annual Operation, Maintenance, and Monitoring Report
Operable Unit 3 - Groundwater

1, BCPMW-4-2, PZ1A, PZ-3, and PZ4. In response to these elevated concentrations four monitoring wells (MW-200-1, MW201-1, WM-204-1, and MW205-1) located immediately downgradient of the BPGWCS remedial wells were sampled numerous times throughout 2022 to confirm there was no off-site migration of VOCs. Analytical results from the 2022 sampling events are provide in **Table 12**. Results from the additional samples from the downgradient monitoring wells MW-200-1, MW-201-1, MW-204-1, MW-205-1 (**Table 12**) were consistent with previous historical results and did not show notable increases indicating that VOCs were not migrating offsite.

6.3 Environmental Effectiveness Monitoring Conclusions

As discussed above, **Figures 9** and **10** indicate that the OU3 BPGWCS System is operating as designed, that the expected associated capture zone has developed, and that off-site migration of groundwater containing Project VOCs is being prevented.

Groundwater monitoring results presented in **Table 12** confirm that the OU3 BPGWCS is effectively preventing Project VOCs in groundwater from migrating offsite.

7 Suggestions

Based on the information provided herein, operation of the BPGWCS shall continue in accordance with the consent order and approved plans. No system modifications or upgrades are needed at this time.

8 Certification

Statement of Certification

On behalf of Northrop Grumman, I hereby certify and attest that the Operable Unit 3 Bethpage Park Groundwater Containment System is operated in compliance with the remedial action objectives provided within the NYSDEC approved Groundwater Interim Remedial Measure Work Plan (Arcadis 2007), which was prepared pursuant to NYSDEC Administrative Order on Consent Index # W1-0018-04-01 (NYSDEC 2005) referencing the Former Grumman Settling Ponds Site and dated July 4, 2005.

Christopher Engler, P.E.
Engineer of Record
License # 069748

pH ²	5.9	5.9	5.8	5.4	--	5.1

Notes, Abbreviations, Qualifiers, and Units:

1. "Total VOCs" represents the sum of individual concentrations of the compounds detected. The values used in calculations referenced in this report have been rounded to the nearest whole number.
2. Influent pH samples collected and measured in the field by Arcadis personnel on the dates listed using a field calibrated pH/conductivity meter. pH units are standard units.
3. Results validated following protocols specified in Sampling and Analysis Plan in the Bethpage Park Groundwater Containment System OM&M Manual (Arcadis 2016). See previous annual reports for historical analytical results.
4. As of August 4, 2022 the RW-1 concentration is representative of the addition of BCPMW-4-1 and BCPMW-4-2 that were added as additional recovery wells.

-- pH not recorded due to a field recording error.

VOC Volatile Organic Compound

2.9 Bold value indicates a detection.

< 1.0 Compound not detected at or above the laboratory quantification limit.

µg/L micrograms per liter

J Result is estimated.

Bethpage Park Groundwater Containment System
Operable Unit 3 (Former Grumman Settling Ponds)
Northrop Grumman,
Bethpage, New York

Notes, Abbreviations, Qualifiers, and Units:

1. Discharge limits per the interim SPDES equivalency program or Division of Water Technical and Operational Guidance Series (TOGS 1.1.1) Quality Standards and Guidance Values and Groundwater Effluent Limitations, if the compound is not part of the SPDES Permit Equivalency.
2. As of September 2017, the 10 SPDES VOCs discharge limits are per Site Number 1-30-003A Operable Unit 3 SPDES Permit Equivalency.
3. "Total VOCs" represents the sum of individual concentrations of compounds detected. The values used in calculations referenced in this report have been rounded to the nearest whole number.
4. Treatment efficiency was calculated by dividing the difference between the influent and effluent total VOC concentrations by the influent total VOC concentration.
5. Effluent pH measured on site using a handheld pH meter. pH units are standard units.
6. Results validated following protocols specified in Sampling and Analysis Plan in the Bethpage Park Groundwater Containment System OM&M Manual (Arcadis 2016). See previous annual reports for historical analytical results.
7. As of August 4, 2022 the RW-1 concentration is representative of the addition of BCPMW-4-1 and BCPMW-4-2 that were added as additional recovery wells.

SPDES	State Pollutant Discharge Elimination System
VOC	Volatile Organic Compound
NE	Not Established
--	pH not recorded due to a field recording error.
1.0	Bold value indicates a detection.
< 1.0	Compound not detected above the laboratory quantification limit.
µg/L	micrograms per liter
ND	Analyte not detected at, or above its laboratory quantification limit.

Table 4**Influent Vapor Sample Analytical Results****Bethpage Park Groundwater Containment System****Operable Unit 3 (Former Grumman Settling Ponds)****Northrop Grumman,****Bethpage, New York****Notes, Abbreviations, Qualifiers, and Units:**

1. Vapor samples collected by Arcadis on the dates shown and submitted to a NYSDOH ELAP certified laboratory for VOC analyses per Modified USEPA Method TO-15. A VOC analyte list is provided in the DRAFT Bethpage Park Groundwater Containment System OM&M Manual (Arcadis 2016). Influent samples were collected at Vapor Sampling Port-1 (VSP-1); refer to Figure 3 of this OM&M Report for the location of VSP-1.
2. "Total VOCs" represents the sum of individual concentrations of compounds detected. The values used in calculations referenced in this report have been rounded to the nearest whole number.
3. Results validated following protocols specified in Sampling and Analysis Plan in the Bethpage Park Groundwater Containment System OM&M Manual (Arcadis 2016). See previous annual reports for historical analytical results.
4. As of August 4, 2022 the RW-1 concentration is representative of the addition of BCPMW-4-1 and BCPMW-4-2 that were added as additional recovery wells.
5. Influent vapor samples were not analyzed for the Q4 2022 reporting period due to a laboratory error. Influent vapor sample results from the Q1 2023 event were in line with historic concentrations.
6. Monthly vapor samples collected through Q1 2022 due to the increase in VOCs detected in groundwater in 2021.

Summary of System Parameters

Bethpage Park Groundwater Containment System

Operable Unit 3 (Former Grumman Settling Ponds)

Northrop Grumman,

Bethpage, New York

Notes, Abbreviations, and Units:

1. Operational data collected by Arcadis on days noted. Parameters listed were typically recorded during compliance monitoring events. Data in this table correspond to approximately the past year of system operation.
2. Instantaneous parameters obtained from the SCADA HMI: Water Flow Rate, Water Pressure, Air Flow Rate.
3. Combined influent water-flow rate is the sum of individual well flow rates via the SCADA System.
4. Remedial Well effluent pressure readings measured at the influent manifold within the treatment system building.
5. Instantaneous values recorded from field-mounted instruments during weekly site visits.
6. Pressure readings recorded as < 1.0 iwc due to pressure being too low for gauge sensitivity.
7. Data recorded by Northrop Grumman Operator on 03/08/2022 due to field recording error.
8. As of August 4, 2022 the RW-1 flow rate presented includes the combined flow rates from wells BCPMW-4-1 and BCPMW-4-2 as additional recovery wells.

Notes, Abbreviations, Qualifiers, and Units:

1. Represents operating period between consecutive monitoring events.
2. Volume of groundwater recovered is based on individual local well totalized flow readings. Listed value is the difference between totalized flow values recorded between consecutive monitoring events. The total groundwater recovered during a given operating period is the sum of the individual well flow totals. Values shown are rounded to the nearest gallon, but should only be considered accurate to two significant figures to account for error associated with field measurements.
3. Mass recovered per well was calculated by multiplying the Total VOC concentration from the most recent sampling event by the number of gallons extracted during the reporting period. The total amount recovered during a given operating period is the sum of masses recovered from each of the individual wells. Values less than ten pounds are presented using two significant figures and values greater than ten pounds have been rounded to the nearest whole number; however, these values should only be considered accurate to two significant figures to account for error associated with field measurements and analytical data.
4. Mass recovery rates were calculated by dividing the total mass recovered for each well and for the system by the number of days in the respective operating period. Values are presented using two significant figures.
5. "Total VOCs" represents the sum of individual concentrations of the VOCs detected.
6. "Project VOCs" represents the sum of individual compound concentrations of 1,1,1-trichloroethane; 1,1-dichloroethane; 1,2-dichloroethane; 1,1-dichloroethylene; tetrachloroethylene; trichloroethylene; vinyl chloride; cis-1,2-dichloroethylene; trans-1,2-dichloroethylene; benzene; toluene; and xylenes-o,m, p.
7. "Non-Project VOCs" represents the difference between Total VOCs and Project VOCs.
8. Values based on operational data recorded prior to system startup on July 21, 2009.
9. As of August 4, 2022 the RW-1 concentration is representative of the addition of BCPMW-4-1 and BCPMW-4-2 that were added as additional recovery wells.

NA	Not Applicable
VOC	Volatile Organic Compound.
<	Less than
gal	Gallons
lbs	Pounds
lbs/day	Pounds per day

Flowrates

Description	Flow (cfm)
BPGWCS	1576
BPSGCS - combined with ISTR	953

Notes:

- High toxicity air contaminant (HTAC) based on 6 CRR-NY Rule 212-2.2, Table 2 – high toxicity air contaminant list.
- Maximum effluent concentrations for soil gas effluent from VSP-601, GW vapor from VSP-05, and combined soil gas/ISTR from VGAC4 based on sampling performed in 2022. Compounds not detected above the laboratory reporting limit are excluded from the air quality impact analysis summary.
- Total for xylenes m, o, and P.
- Emission rate calculated based on maximum effluent concentration and maximum air flow rates measured during the sampling events. Emission rate standardized at 70 °F and 1 atm.
e.g., TCE (lb/yr) = TCE [μg/m³] x Air Flow Rate [ft³/min] x (1 m³/35.3147 ft³) x (60 min/hr) x (0.000001 g/1 μg) x (0.0022 lb/g) x 8,760 hrs/yr
- Combined 2022 emissions from groundwater, ISTR, and soil gas containment systems.
- 100 lb/yr for non-HTACs, and mass emission limits based on Rule 212-2.2, Table 2 for HTACs.
- For HTACs, no further demonstration (i.e., comparison to SGCs, AGCs, or air modeling) is required if the actual facility-wide emissions are less than mass emission limit. For non-HTACs, no further demonstration is required if the actual facility-wide emissions are less than 100 lbs/yr.
- Blank cell indicates that the compound was not detected above its laboratory quantification limit.

Table 10
Summary of Remedial Well Groundwater Sample Analytical Results - VOCs
Bethpage Park Groundwater Containment System
Operable Unit 3 (Former Grumman Settling Ponds)
Northrop Grumman,
Bethpage, New York

Notes, Abbreviations, Qualifiers, and Units:

1. Water samples collected by Arcadis on the dates shown and submitted to a NYSDOH ELAP certified laboratory for VOC analyses per NYSDEC ASP 2005, Method OLM 4.3 (prior to September 1, 2014) and per USEPA Method 8260C (after September 1, 2014). Results validated following protocols specified in Sampling and Analysis Plan in the DRAFT Bethpage Park Groundwater Containment System OM&M Manual (Arcadis 2016). See previous quarterly reports for historical analytical results.
2. "Total VOCs" represents the sum of individual concentrations of the VOCs detected.
3. As of August 4, 2022 the RW-1 concentration is representative of the addition of BCPMW-4-1 and BCPMW-4-2 that were added as additional recovery wells.

ASP	Analytical Services Protocol
ELAP	Environmental Laboratory Approval Program
NE	Not Established
NYSDEC	New York State Department of Environmental Conservation
NYSDOH	New York State Department of Health
OLM	Ozone Limited Method
OM&M	Operation, Maintenance, and Monitoring
SCGs	Standards, Criteria, and Guidance values
USEPA	United States Environmental Protection Agency
VOC	Volatile Organic Compound

■	Bold cell outline indicates an exceedance of an SCG
2.1	Bold data indicates a detection
< 1.0	Compound not detected above its laboratory quantification limit
J	Compound detected below its reporting limit; value is estimated
ND	Analyte not detected at, or above its laboratory quantification limit.
µg/L	micrograms per liter

Table 11
Summary of Water-Level Elevations
Bethpage Park Groundwater Containment System
Operable Unit 3 (Former Grumman Settling Ponds)
Bethpage, New York

Notes and Abbreviations:

1.	BCPMW-4-1 and BCPMW-4-2 were converted to recovery wells. Q1 and Q2 data recorded as monitoring wells, Q3 and Q4 data recorded as recovery wells
2.	Wells installed by EMAGIN in 2017 to replace monitoring wells MW-207-1a (replaced by MW-207A-1R) and MW-207-1b (replaced by MW-207B-1R) installed by ERM in 2015.
3.	Wells resurveyed following conversion to recovery wells. Lower elevations applied to Q3 and Q4 measurements.
ft msl	Feet relative to mean sea level
--	Not measured
NA	Not Accessible

Table 12
Concentrations of Volatile Organic Compounds and 1,4-Dioxane
in Groundwater Samples Collected from Monitoring Wells,
Bethpage Park Grondwater Containment System,
OU3 (Former Settling Ponds)
Bethpage, New York

Notes and Abbreviations

1. Historical data available in previous quarterly reports.
2. Results are validated at 20% frequency, per protocols specified in Sampling and Analysis Plan in the Bethpage Park Groundwater Containment System OM&M Manual (ARCADIS 2016).
3. Samples analyzed for the TCL VOCs using USEPA Method 8260C.
4. "Total VOCs" represents the sum of individual concentrations of the VOCs detected. TVOCs were rounded to two significant figures.
5. "Project VOCs" represents the sum of individual concentrations of 1,1,1-Trichloroethane; 1,1-Dichloroethane; 1,2-Dichloroethane; 1,1-Dichloroethene; Tetrachloroethene; Trichloroethene; Vinyl Chloride; cis-1,2-Dichloroethene; trans-1,2-Dichloroethene; Benzene; Toluene; and Xylenes-o,m, and p.
6. Samples analyzed for 1,4-Dioxane using USEPA Method 8270D SIM (prior to 2016), per USEPA Method 522 SIM (2016-2017) and per USEPA Method 8270D SIM (since 2018).

 Bolded outline indicates an exceedance of an SCG.

< 5	Compound not detected above its laboratory quantification limit.
2.1	Bold value indicates a detection.
D	Constituent identified from secondary dilution
J	Result is estimated
ug/L	Micrograms per liter
NE	Not Established
--	Not Analyzed
NYSDEC	New York State Department of Environmental Conservation
REP	Field Replicate QA/QC sample
SCGs	Standards, Criteria, and Guidance values
SIM	Selective Ion Monitoring
TCL	Target compound list.
USEPA	United State Environmental Protection Agency
VOC	Volatile Organic Compound
OU	Operable Unit

(FORMER GRUMMAN SETTLING PONDS)
BETHPAGE, NEW YORK

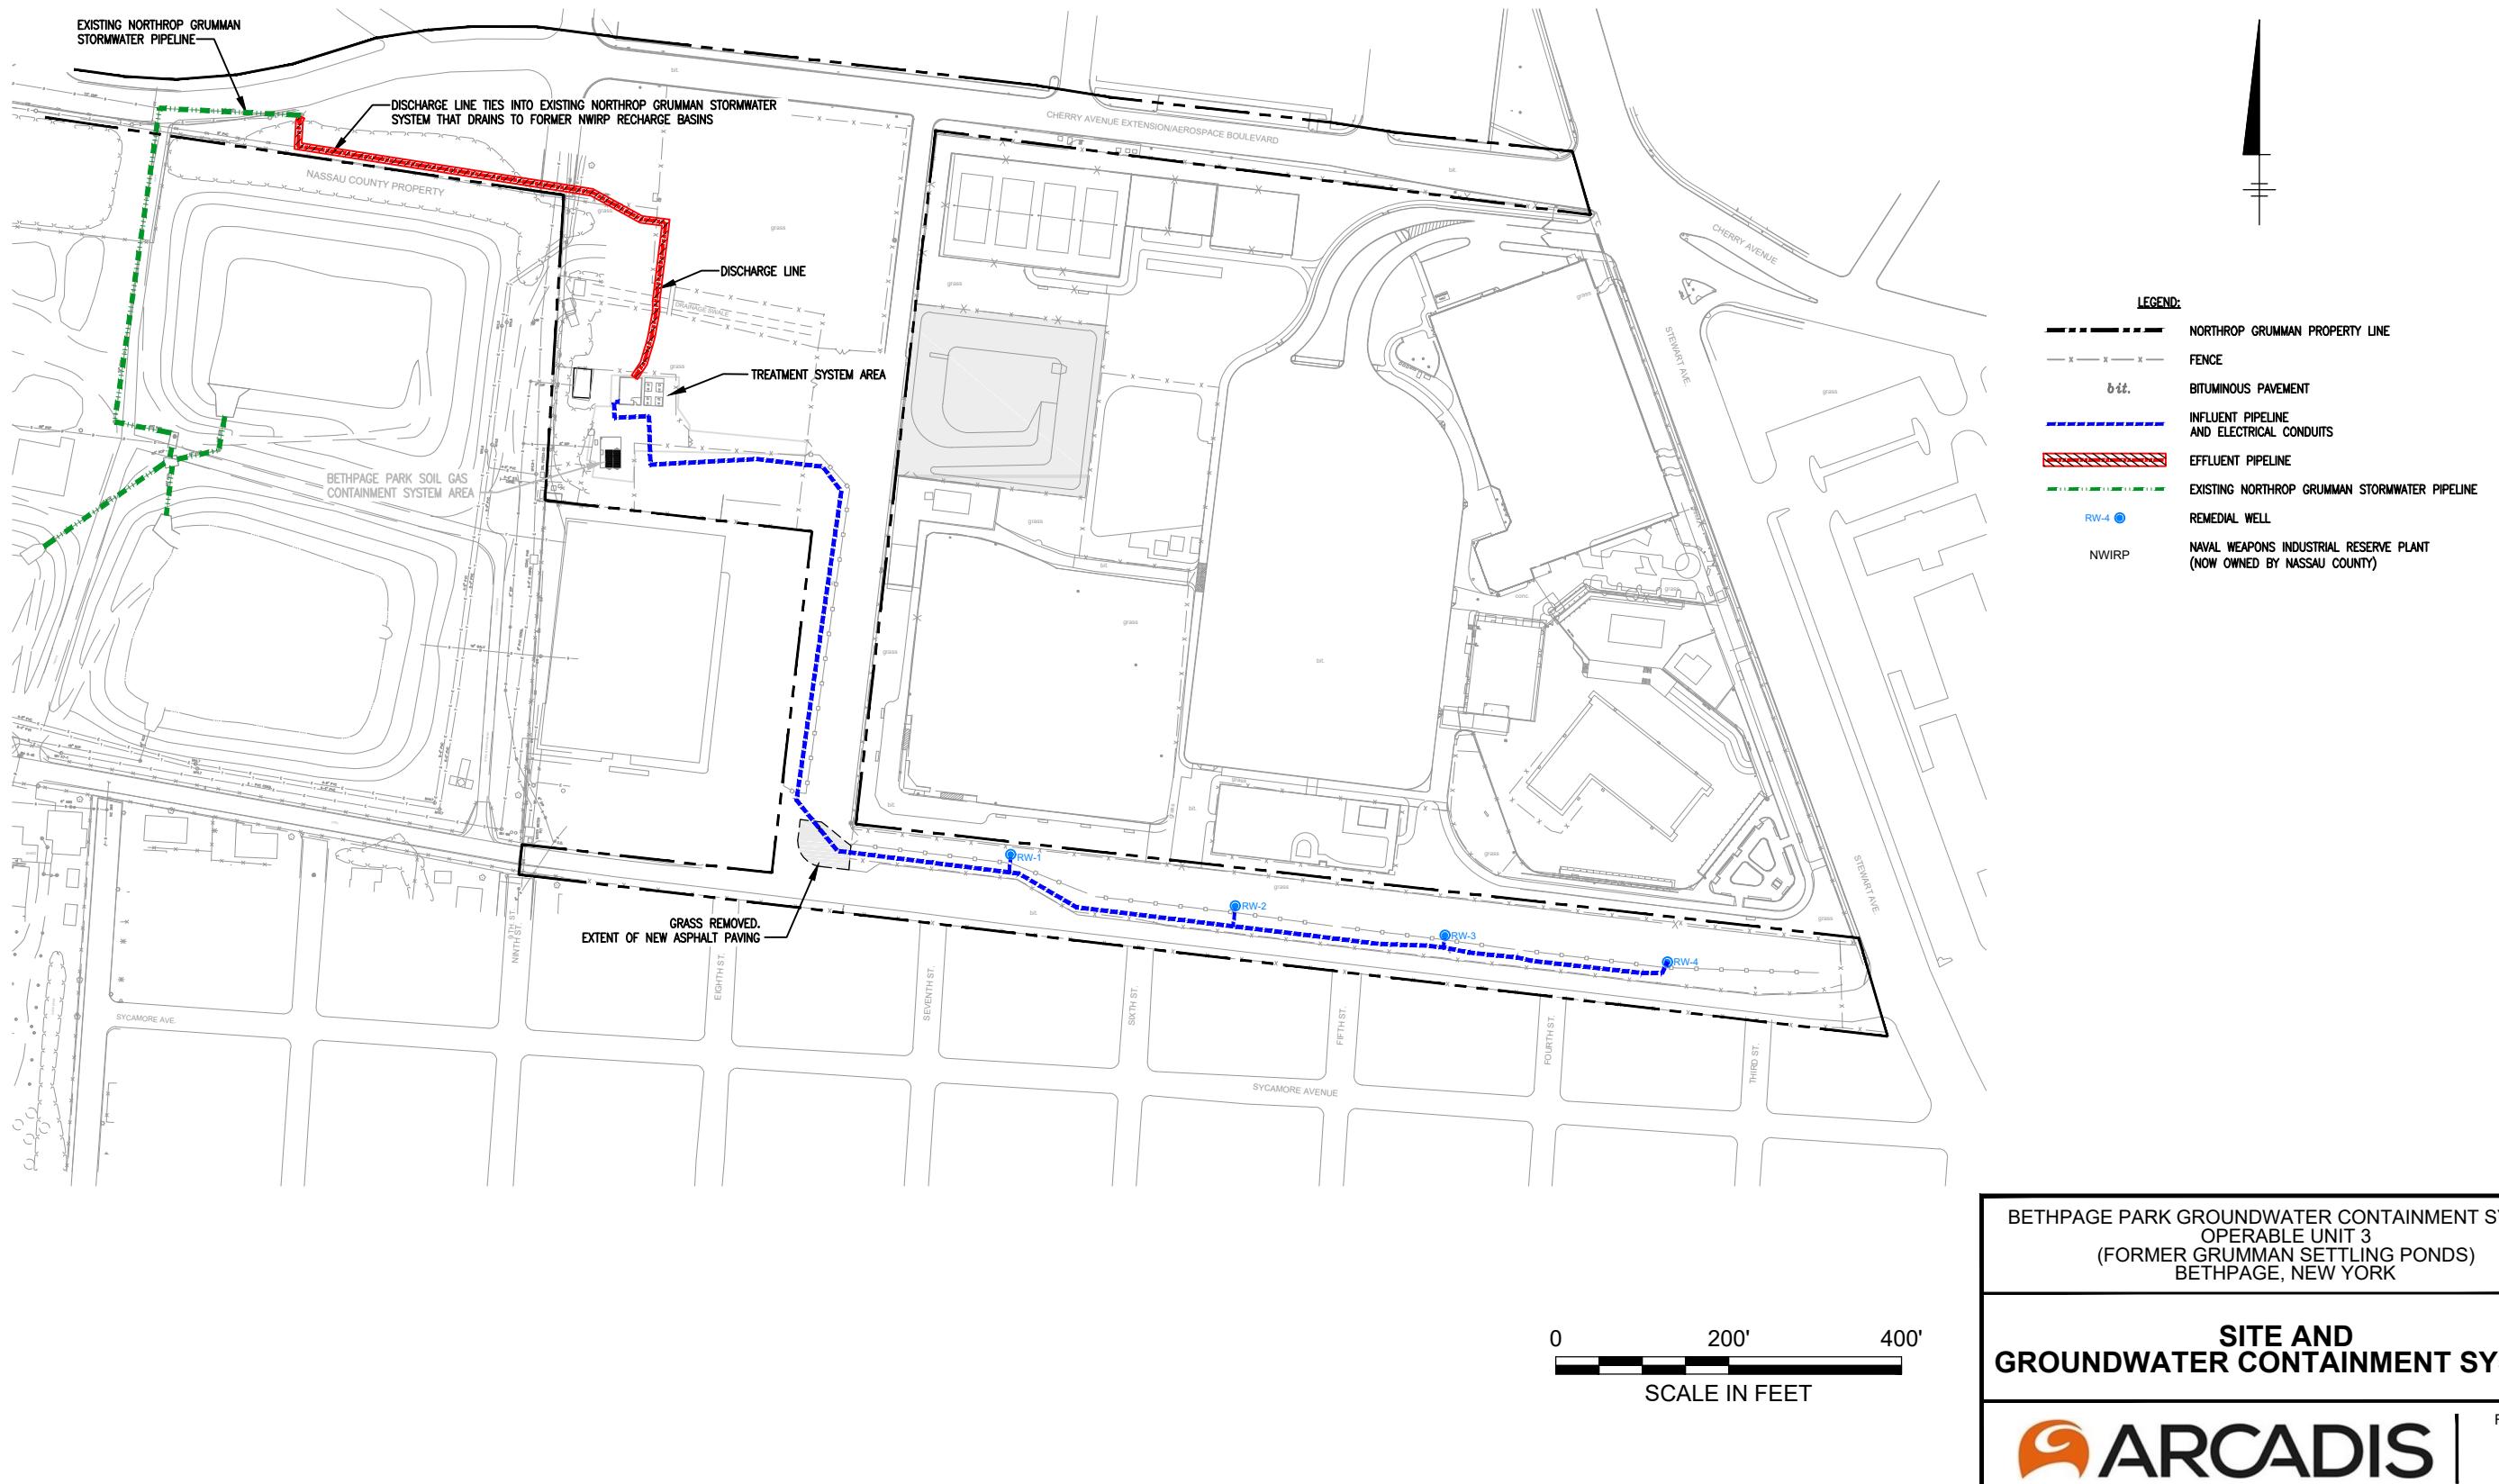

SITE LOCATION

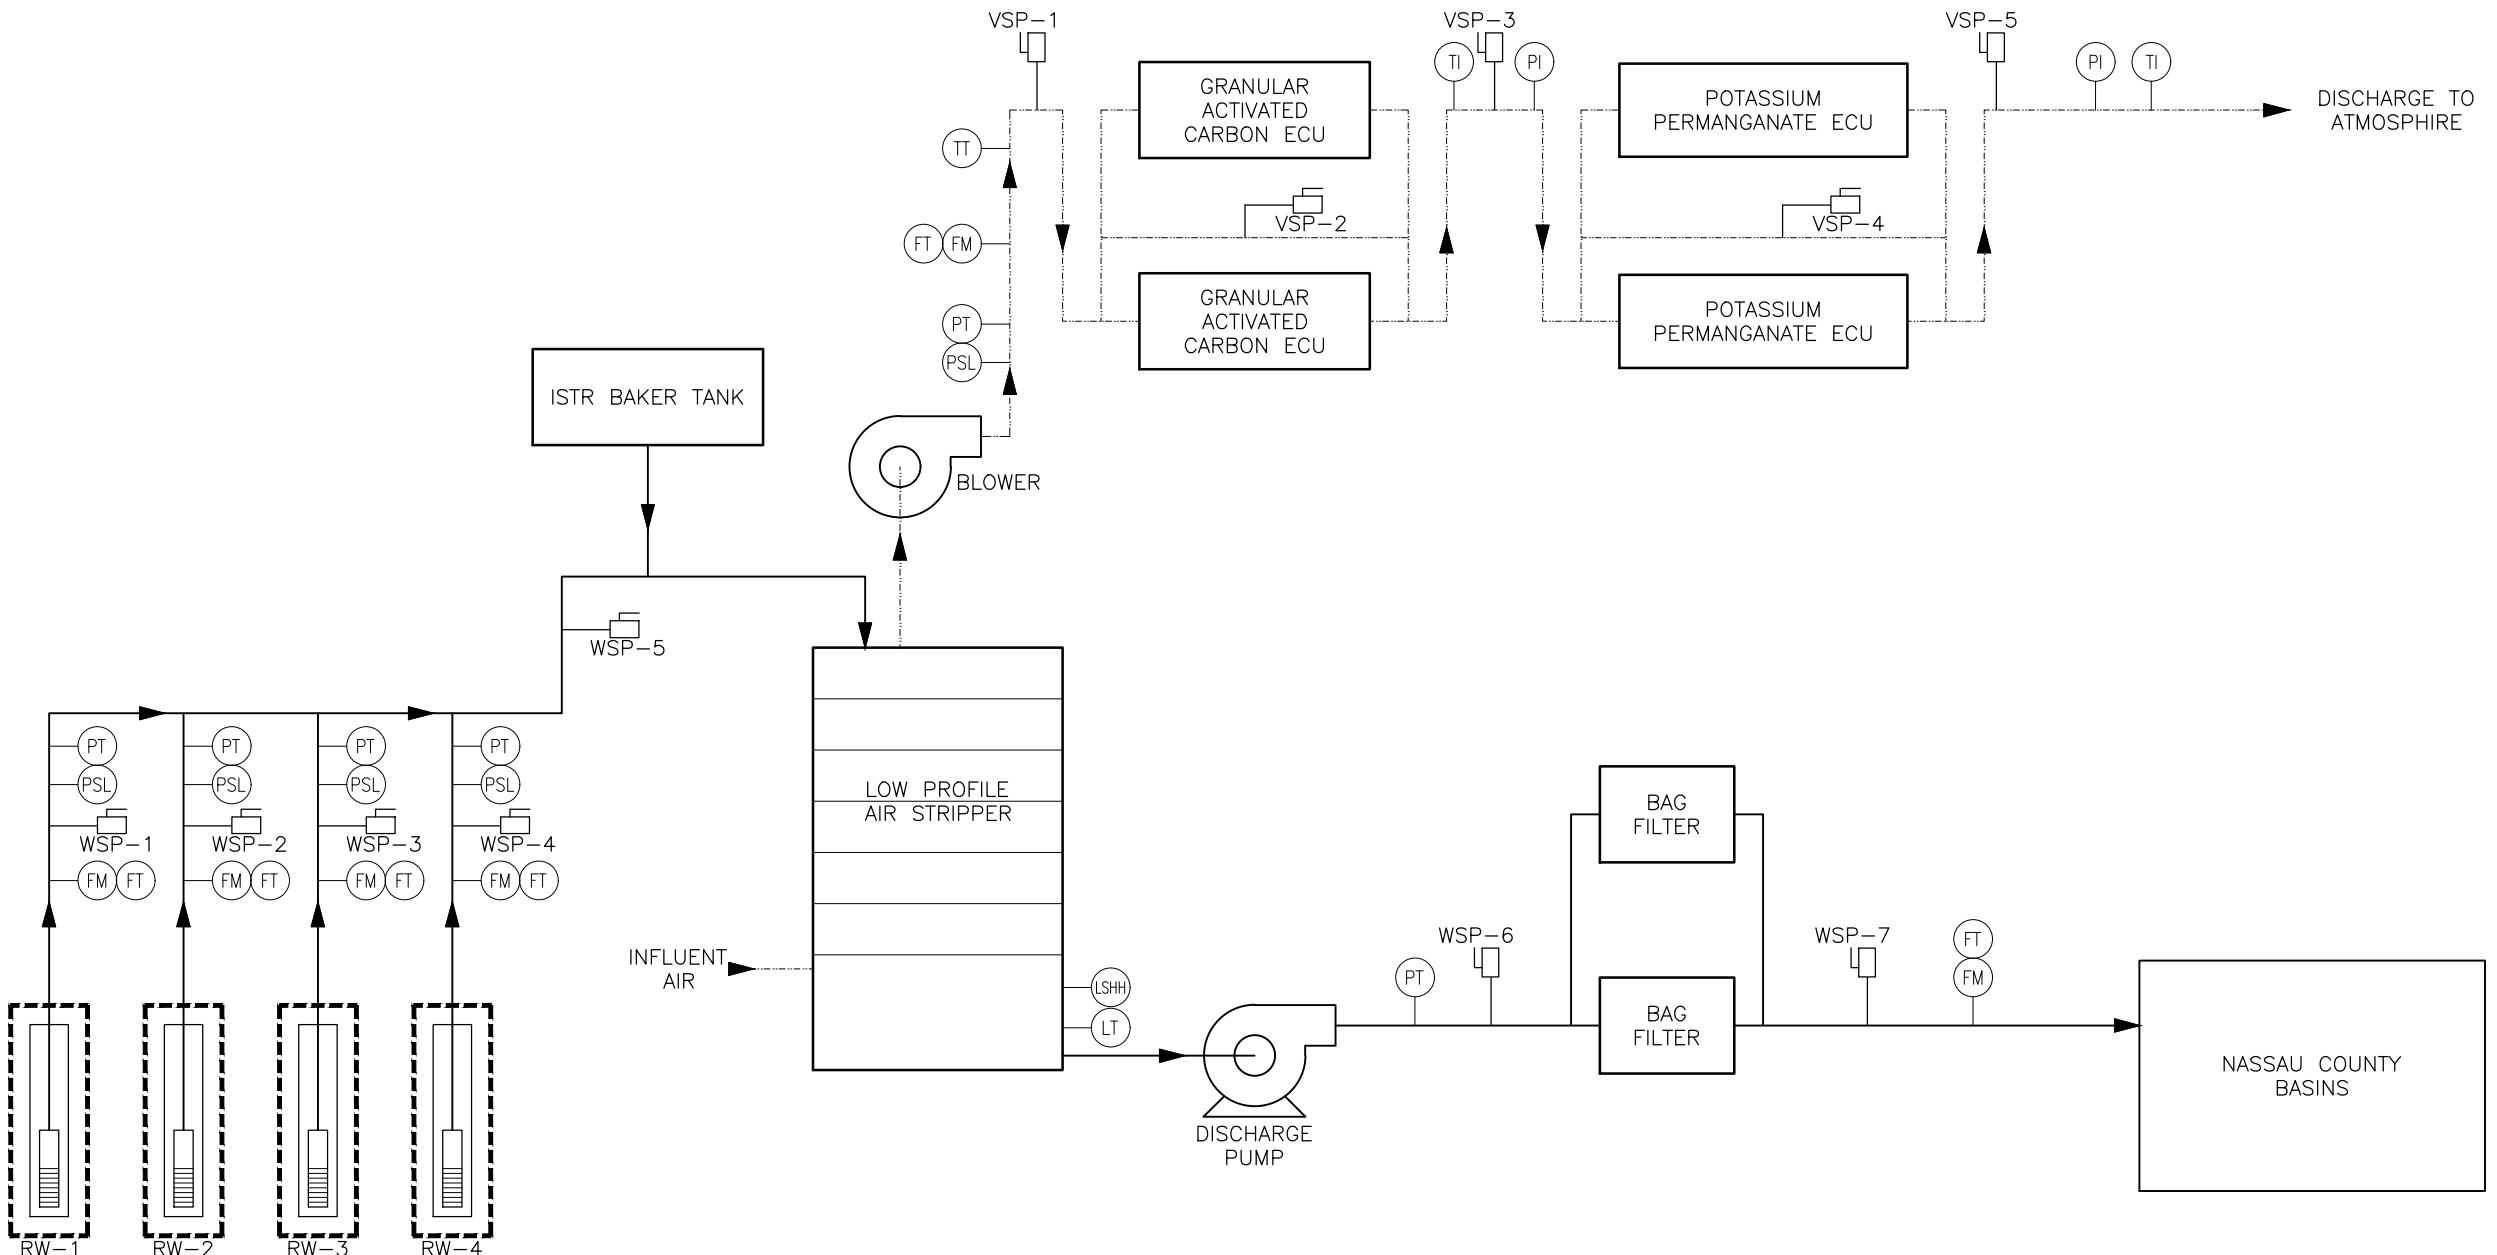

A scale bar indicating distance in feet. It features a horizontal line with tick marks. The text "0" is at the left end, "2000'" is above the line near the first tick mark, and "4000'" is above the line near the third tick mark. There is a noticeable gap in the line between the second and third tick marks.

Abbreviations, Notes, and Units:

VOC = Volatile Organic Compound

TVOCs = Total VOCs removed

Project VOCs = sum of 1,1,1-trichloroethane; 1,1-dichloroethane; 1,2-dichloroethane; 1,1-dichloroethene; tetrachloroethene; trichloroethene; vinyl chloride; cis-1,2-dichloroethene; trans-1,2-dichloroethene; benzene; toluene; and total xylenes.

Non-Project VOCs = sum of VOCs that are not Project VOCs.

1. A notable increase in VOC mass removal was observed between Q3 2021 and Q1 2022 due to the increase in TVOCs detected (Figures 6A)

2. As of August 4, 2022 the RW-1 concentration is representative of the addition of BCPMW-4-1 and BCPMW-4-2 that were added as additional recovery wells.

lbs = pounds

Abbreviations, Notes, and Units:

VOC = Volatile Organic Compound

TVOCs = Total VOCs detected

Project VOCs = sum of 1,1,1-trichloroethane; 1,1-dichloroethane; 1,2-dichloroethane; 1,1-dichloroethene; tetrachloroethene; trichloroethene; vinyl chloride; cis-1,2-dichloroethene; trans-1,2-dichloroethene; benzene; toluene; and total xylenes.

1. Results prior to September 10, 2009 are not shown to improve figure clarity. Total Project VOC concentrations are greater than 2,000 µg/L. See previous reports for full data set.

2. A notable increase in Project VOCs was detected in the August 13, 2021, sample from RW-2. This increase is likely due to the ISTR system activities on the Bethpage Community Park property

3. As of August 4, 2022 the RW-1 concentration is representative of the addition of BCPMW-4-1 and BCPMW-4-2 that were added as additional recovery wells. A notable increase in TVOCs was detected in the August 22, 2022 sample from RW-1, which is likely due to the addition of BCPMW-4-1 and BCPMW-4-2.

µg/l = micrograms per liter

REMEDIAL WELL PROJECT VOC CONCENTRATIONS

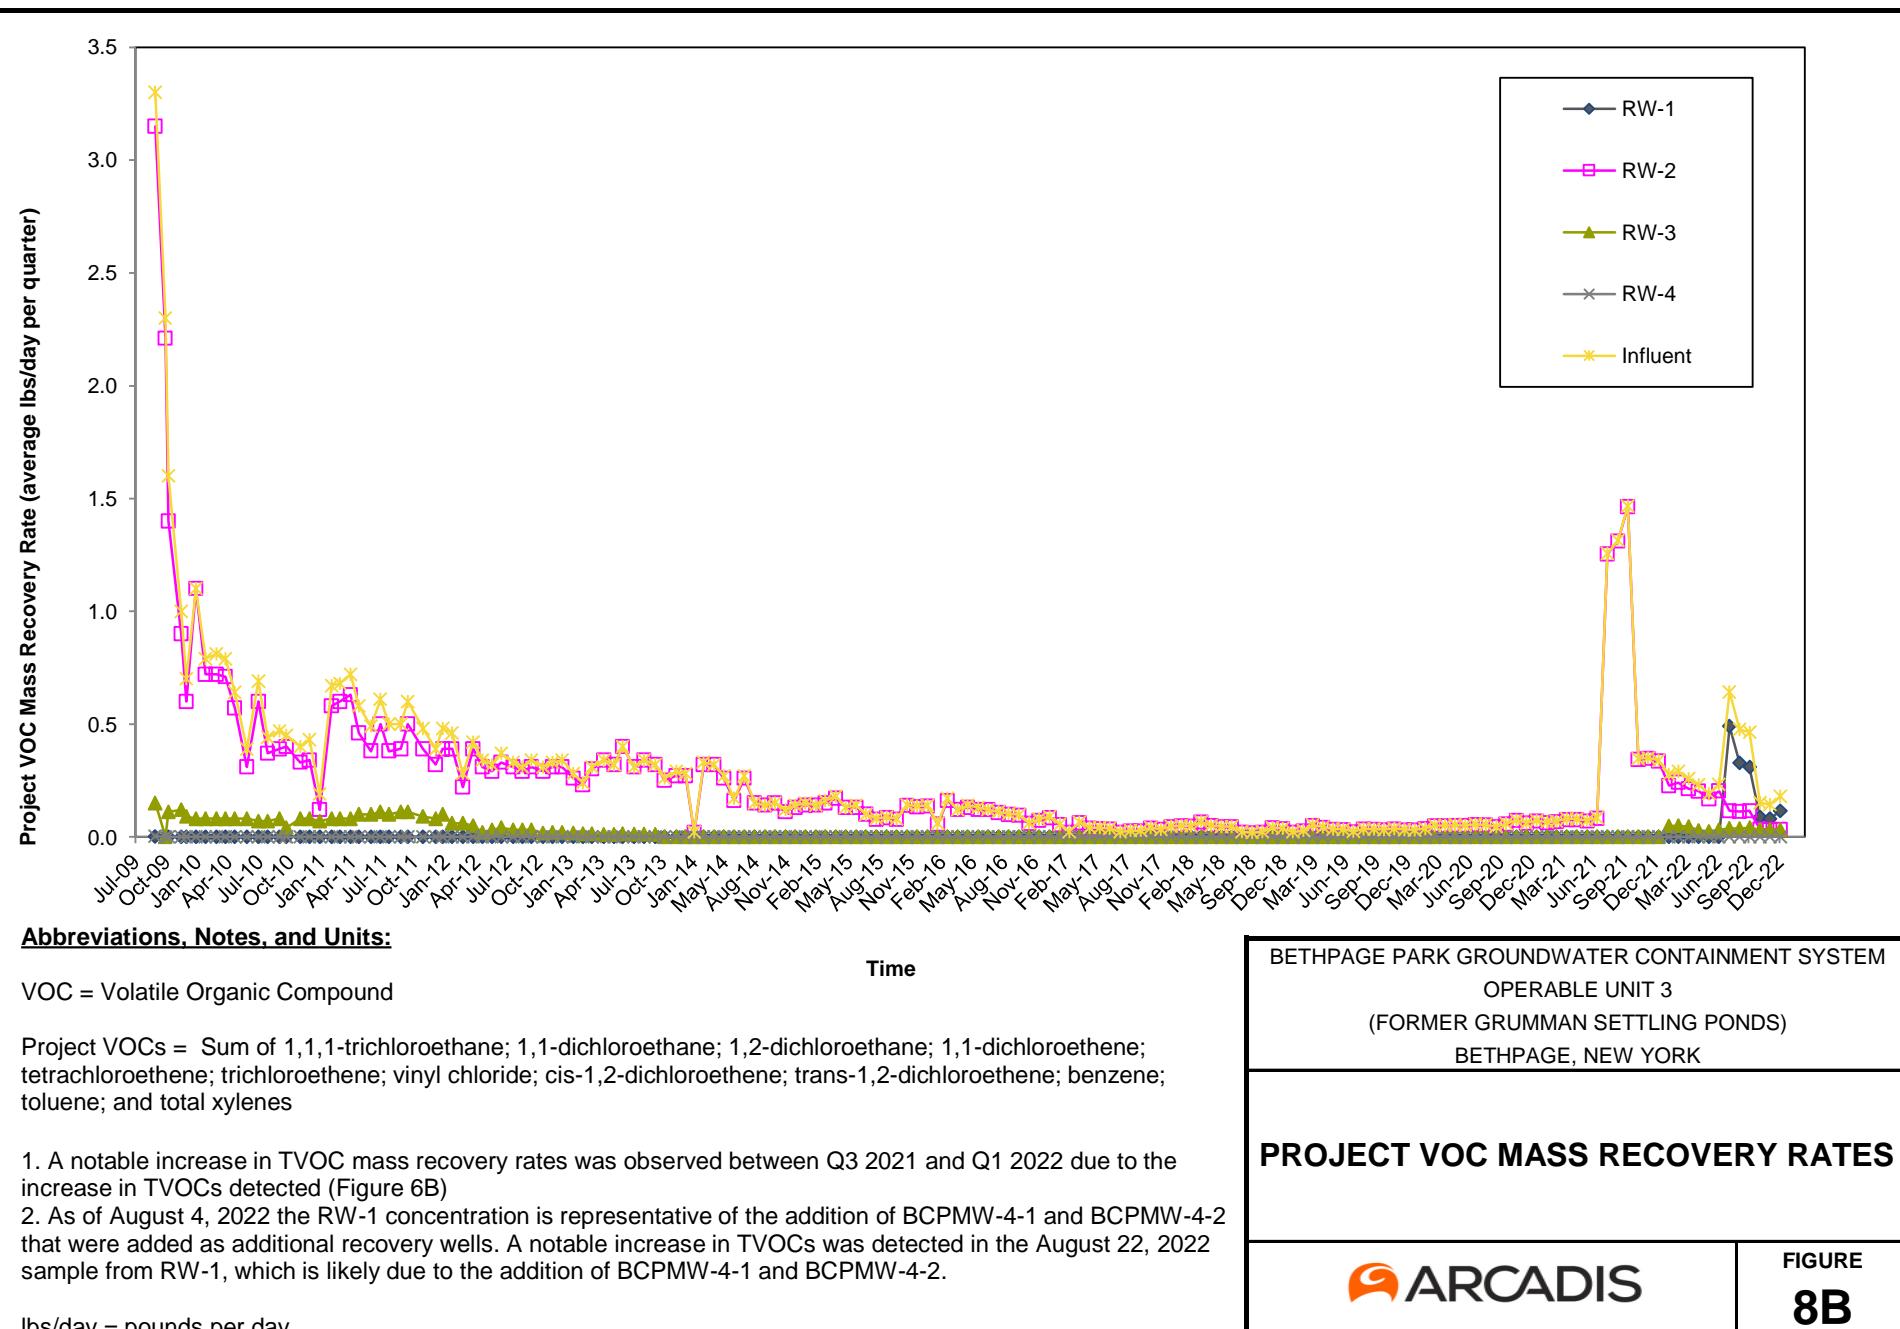

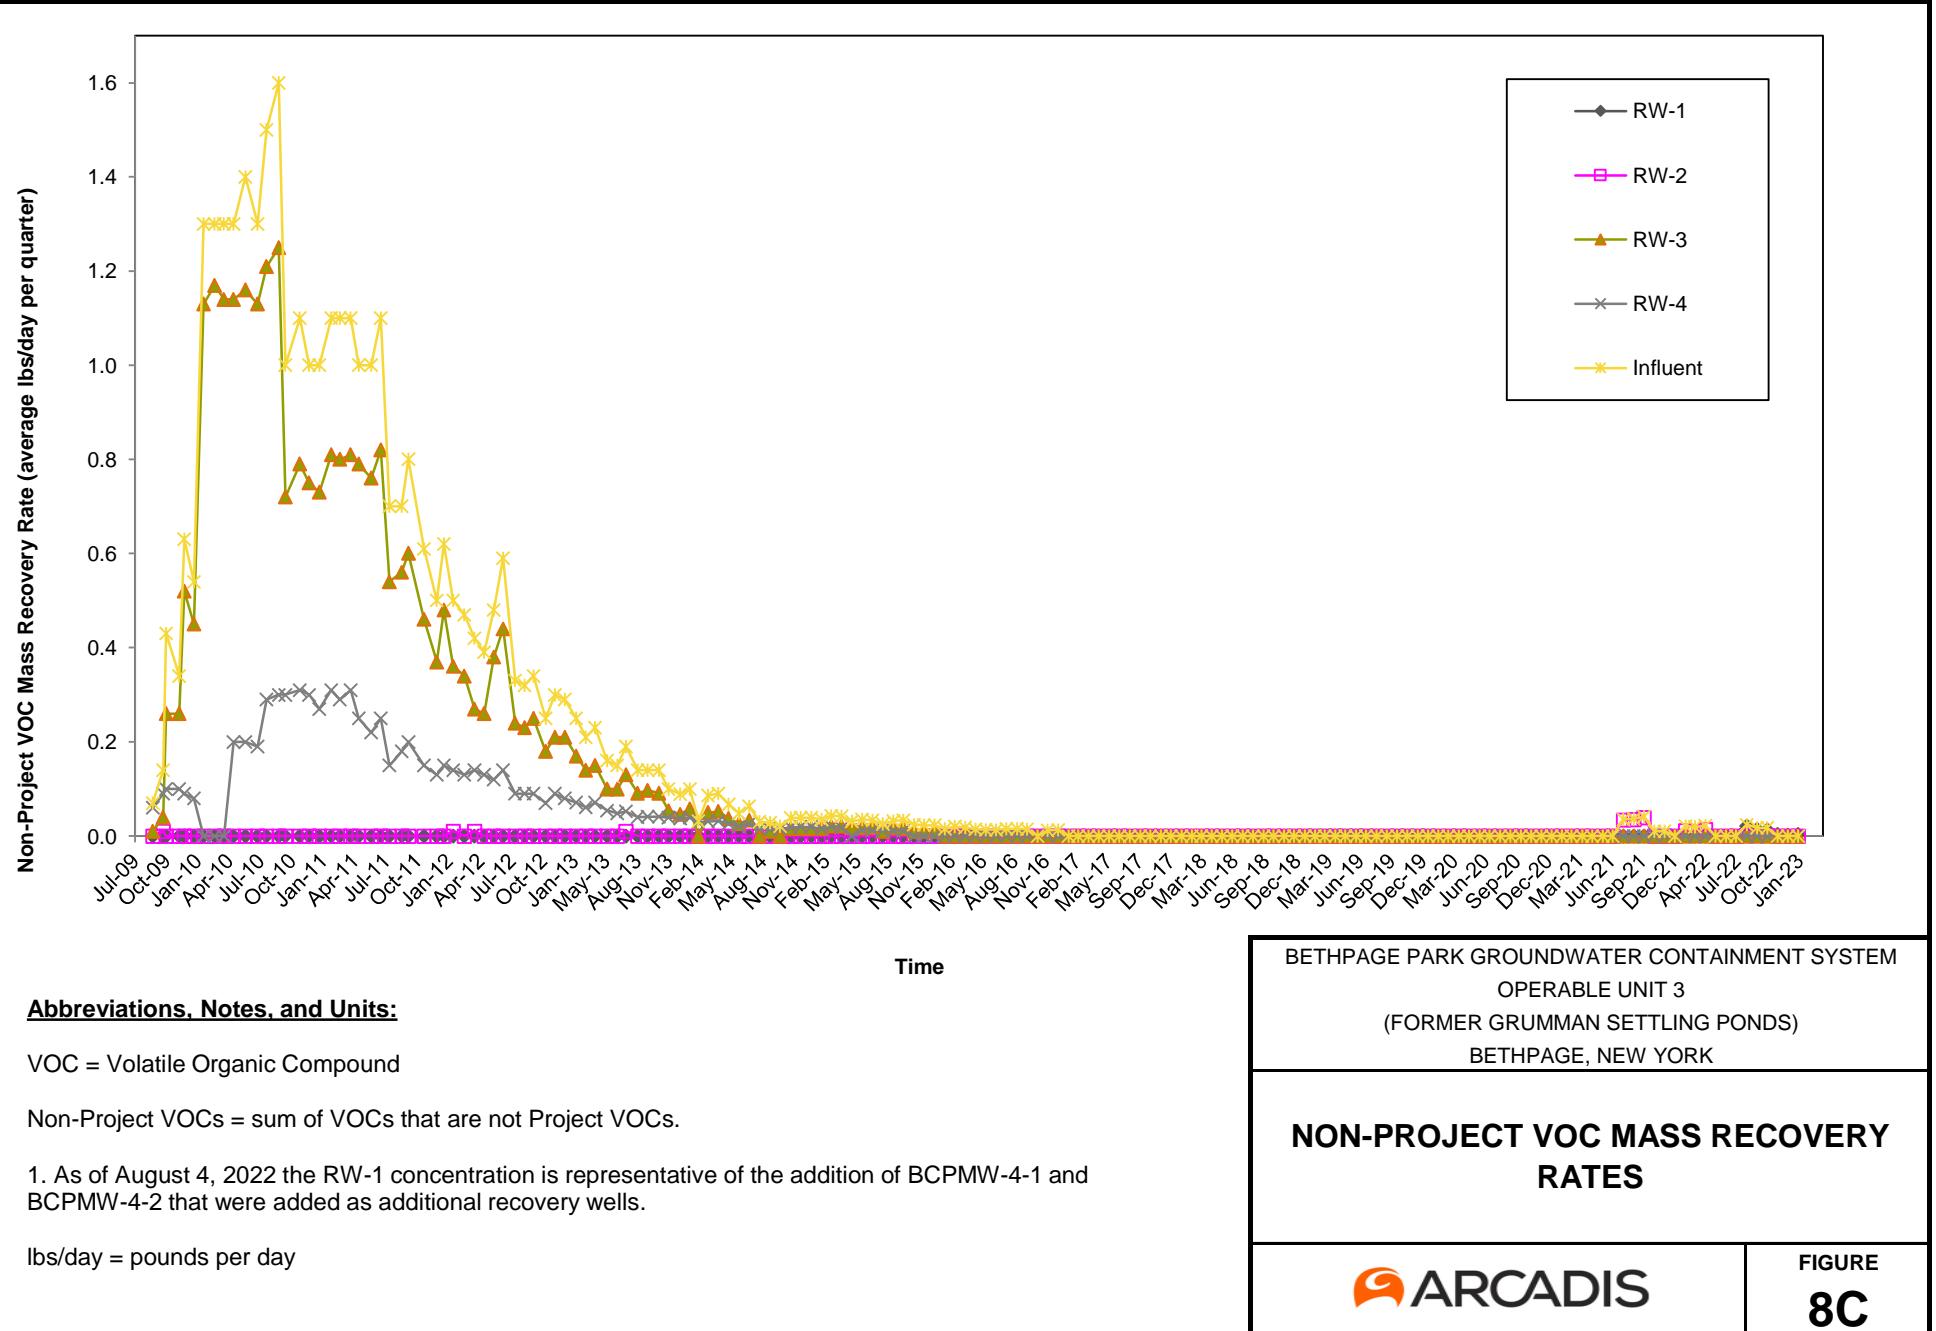

FIGURE
6B

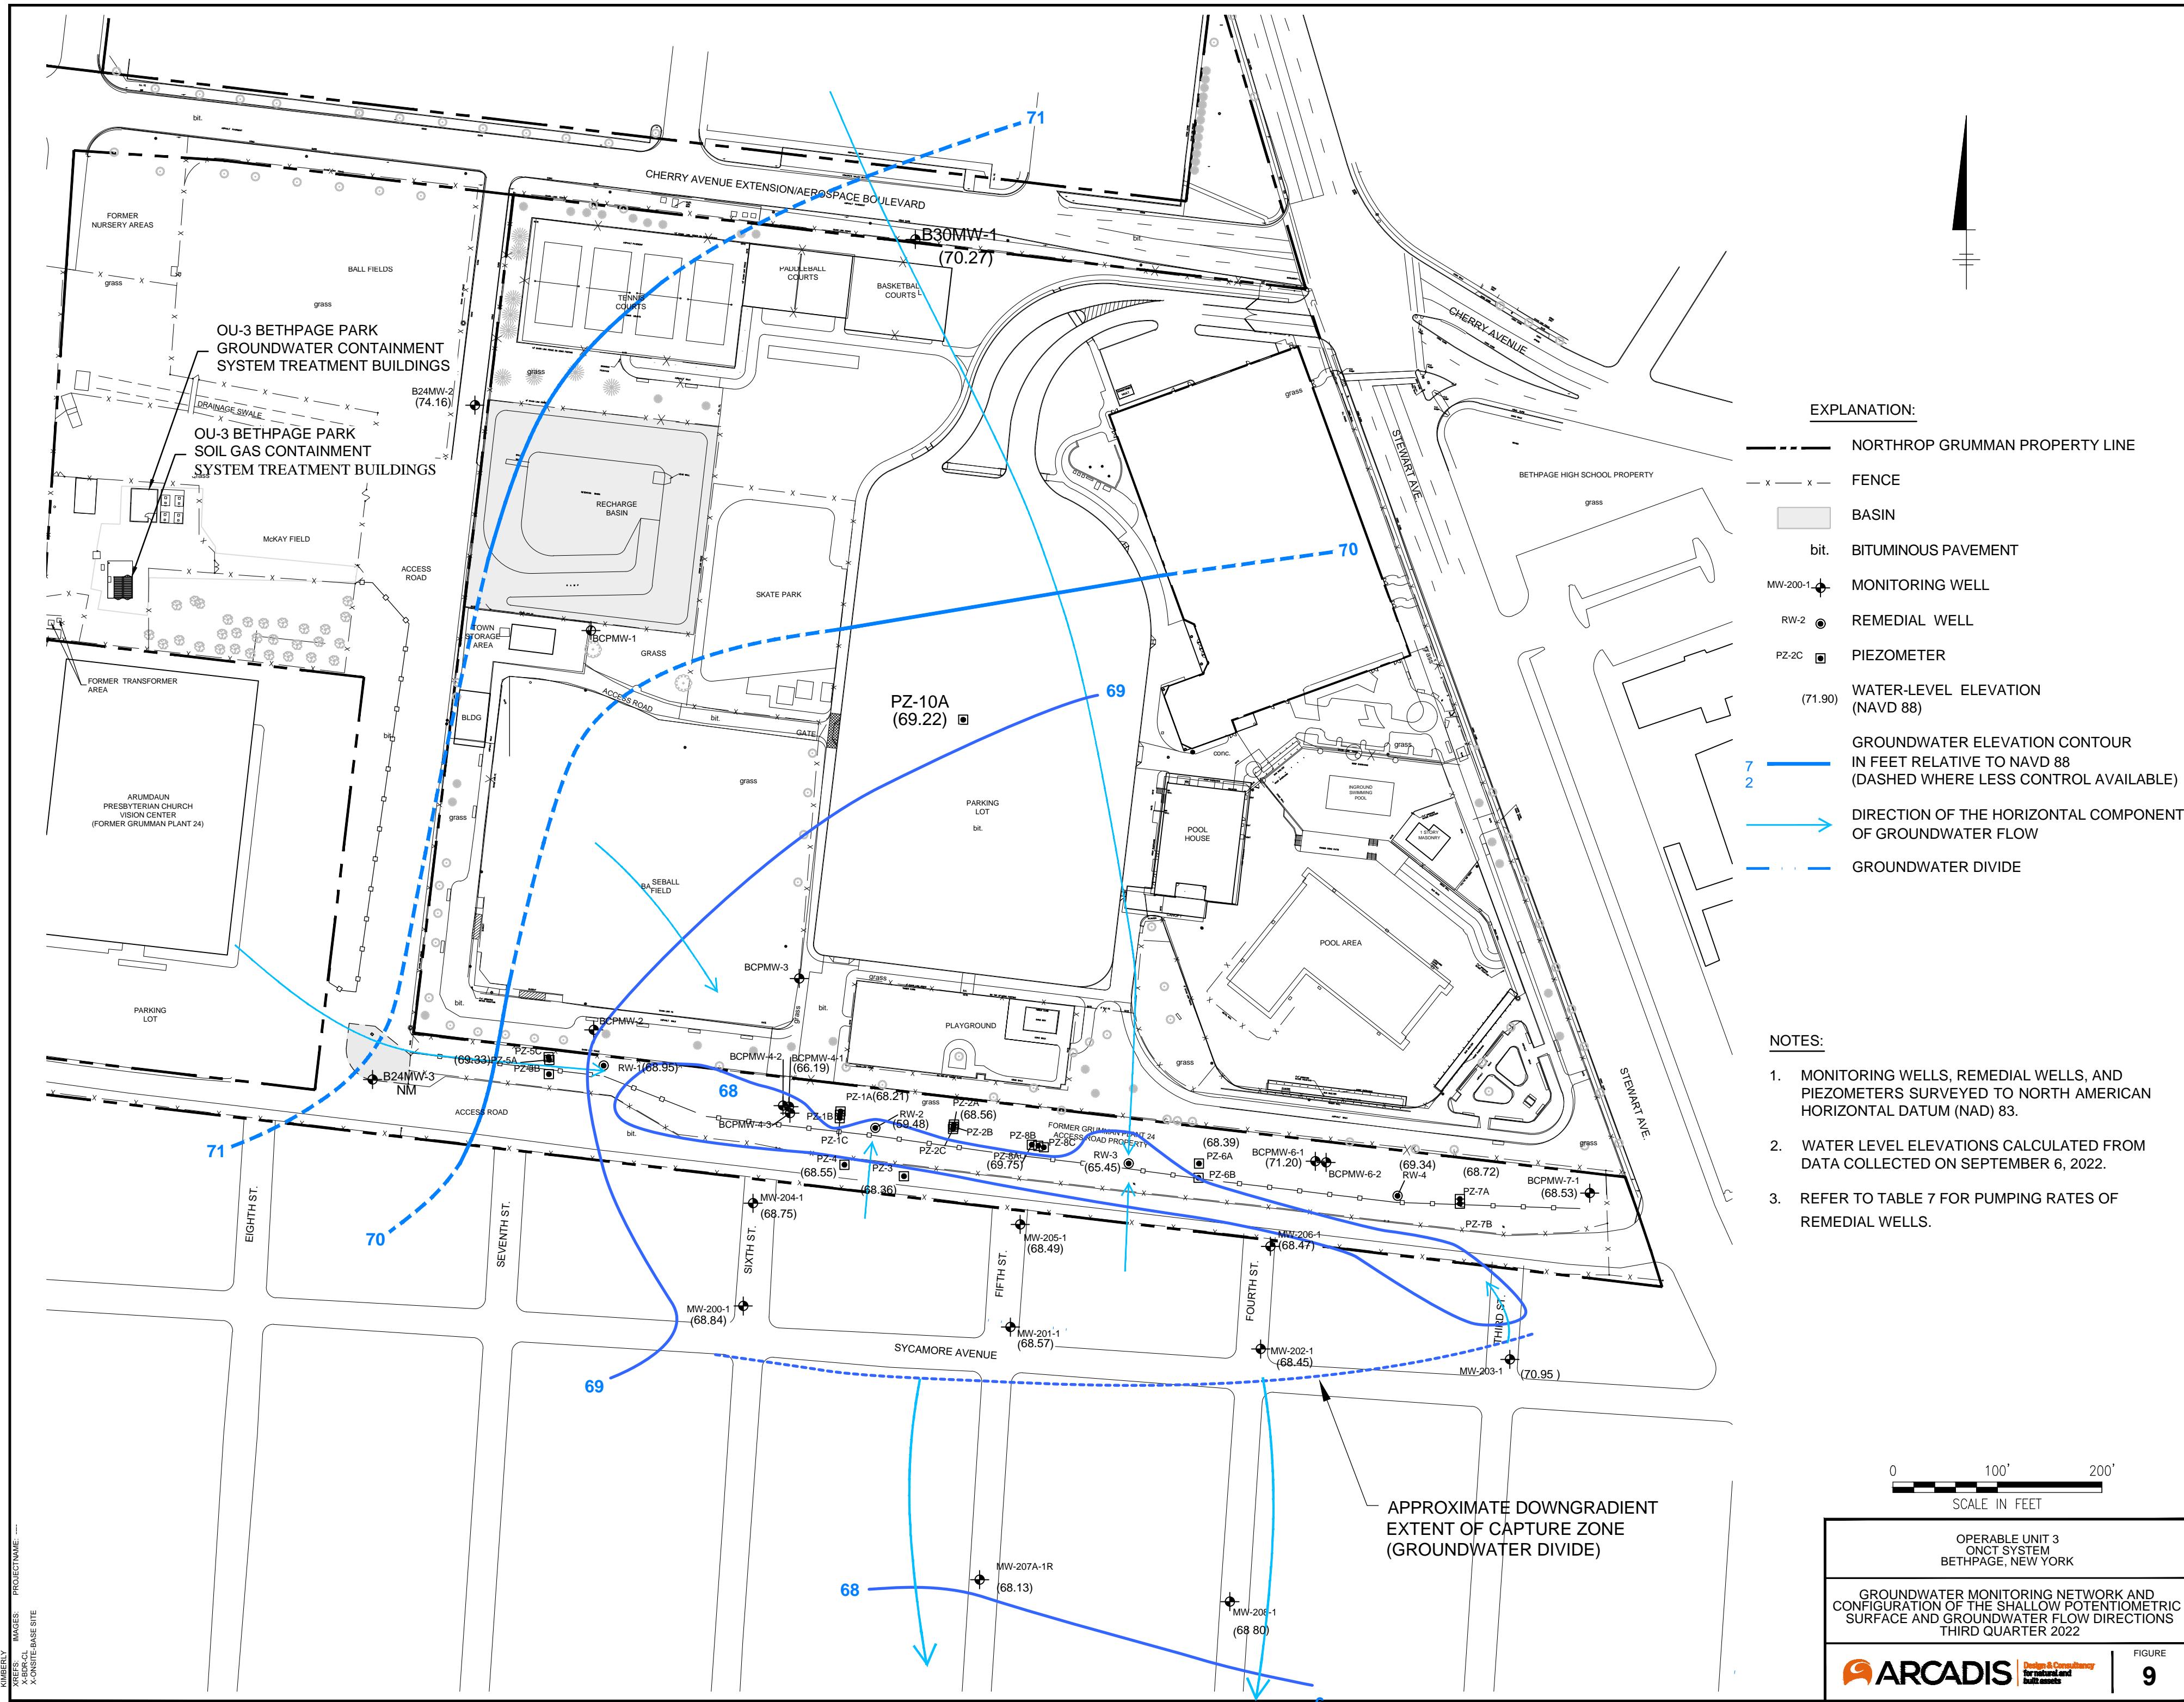

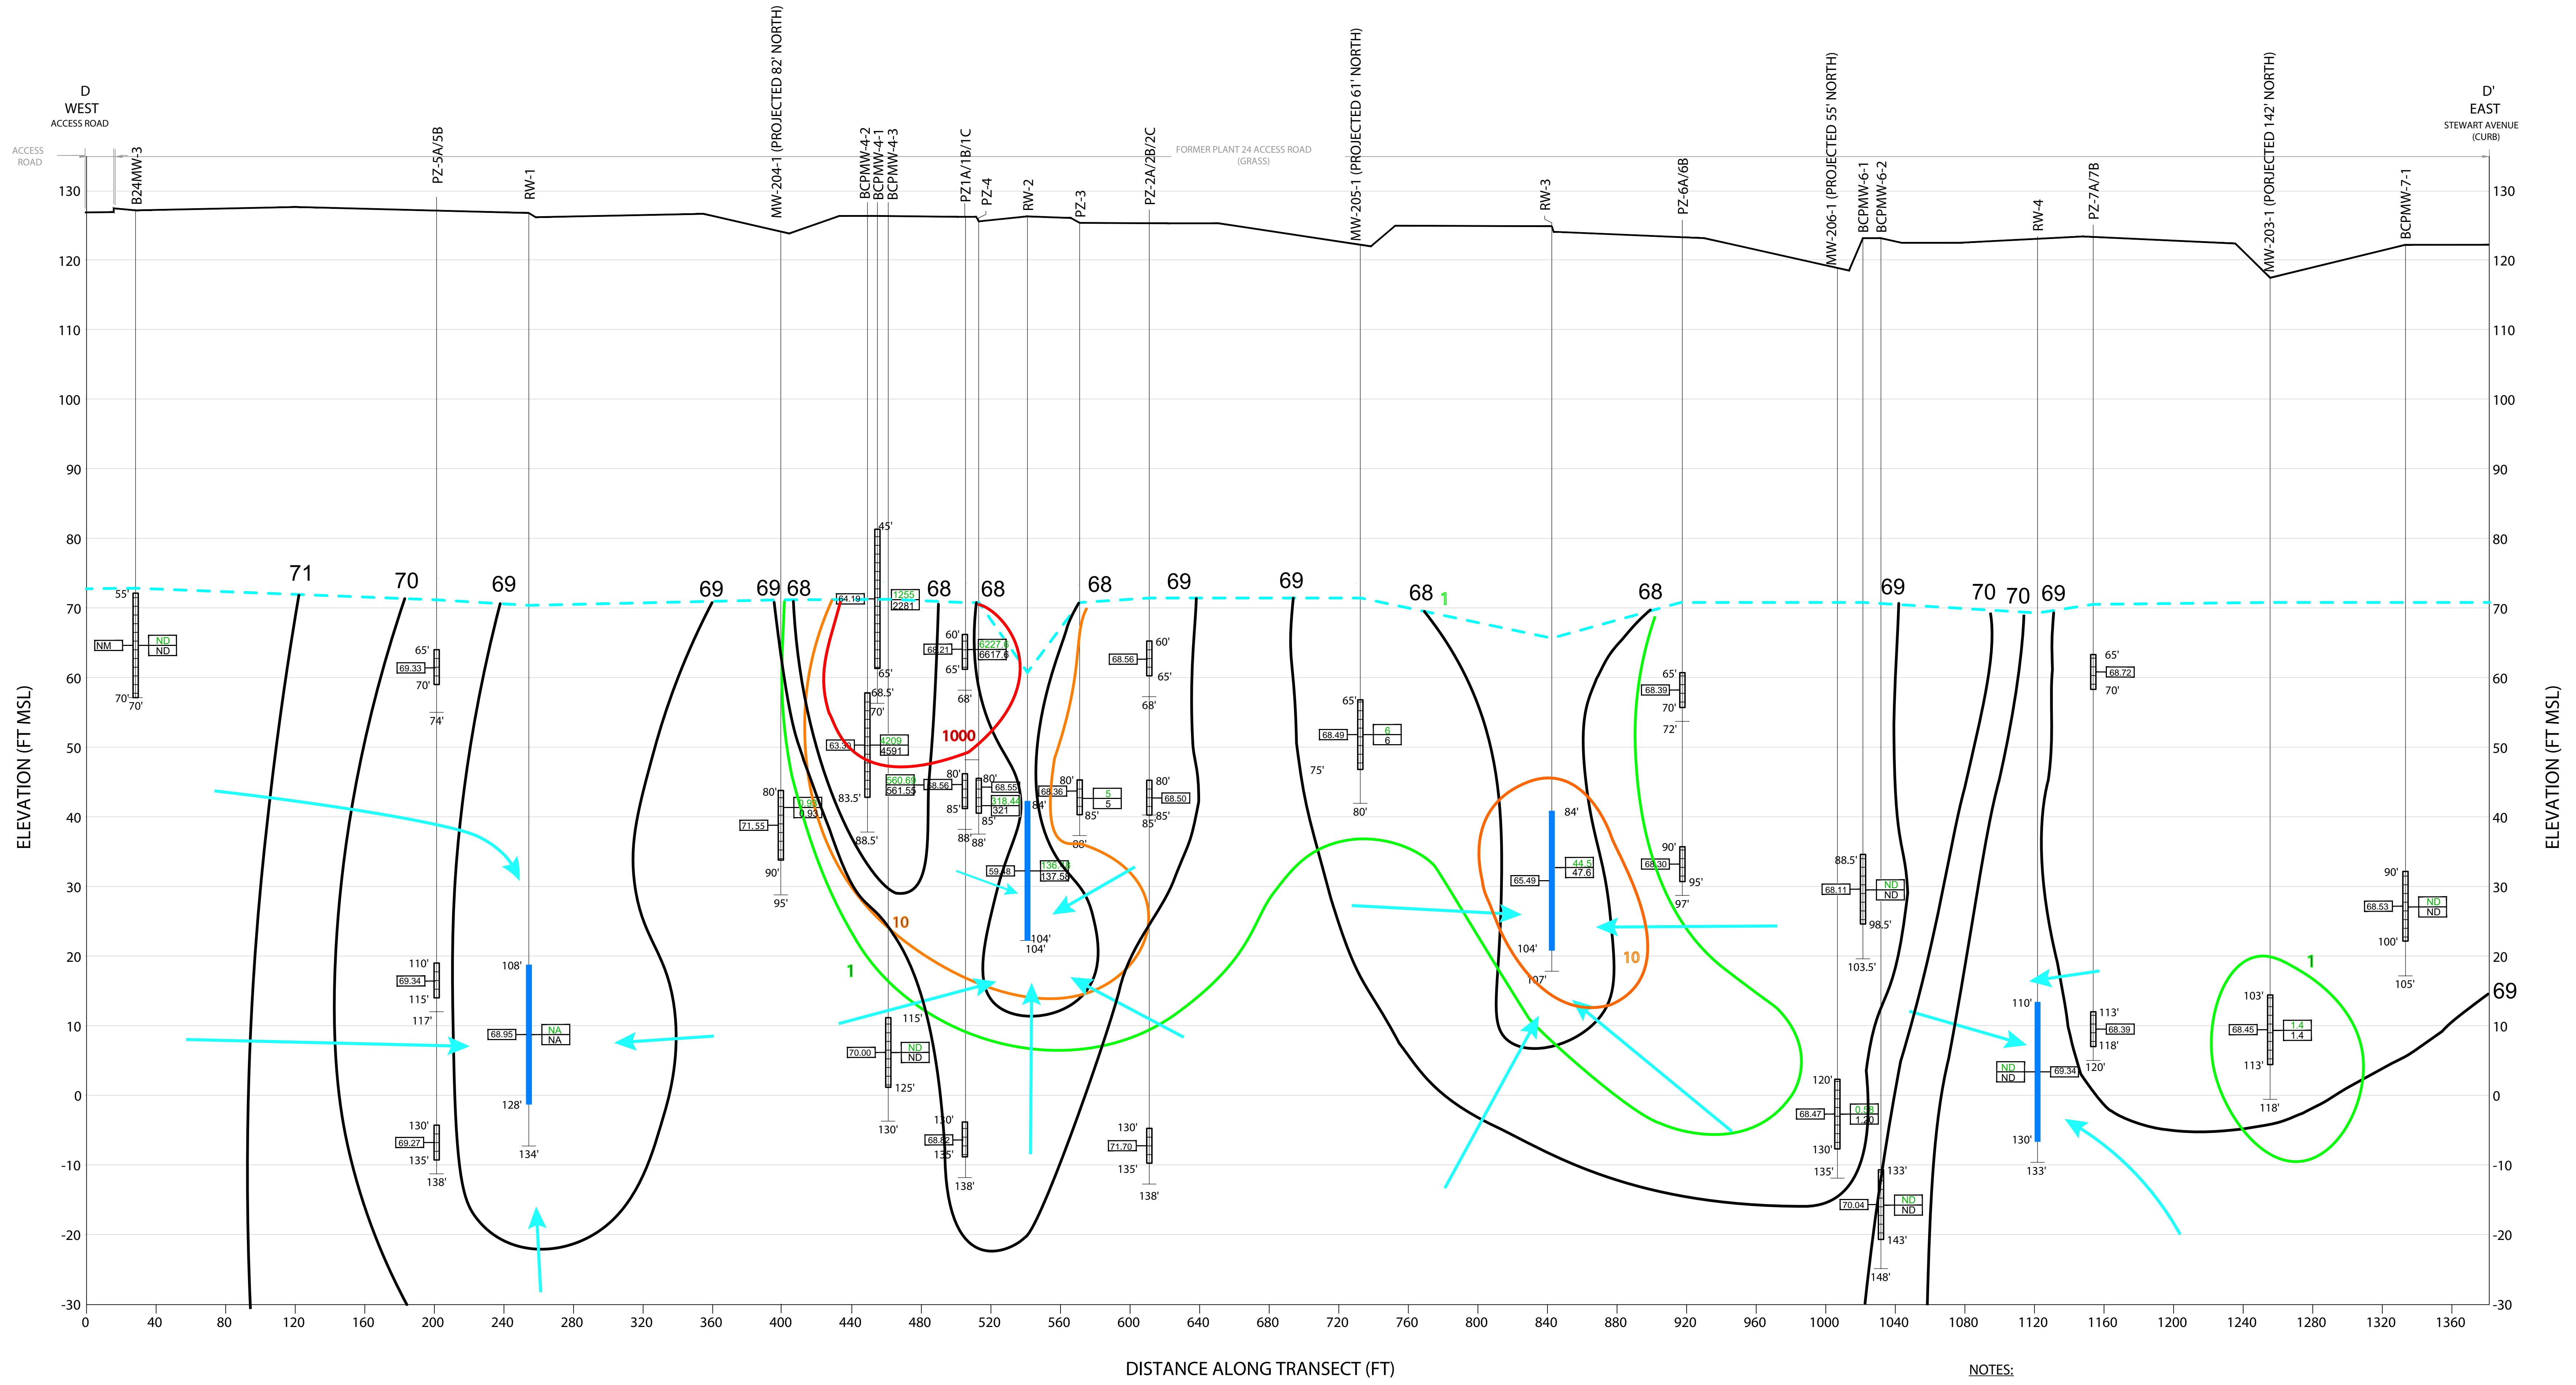

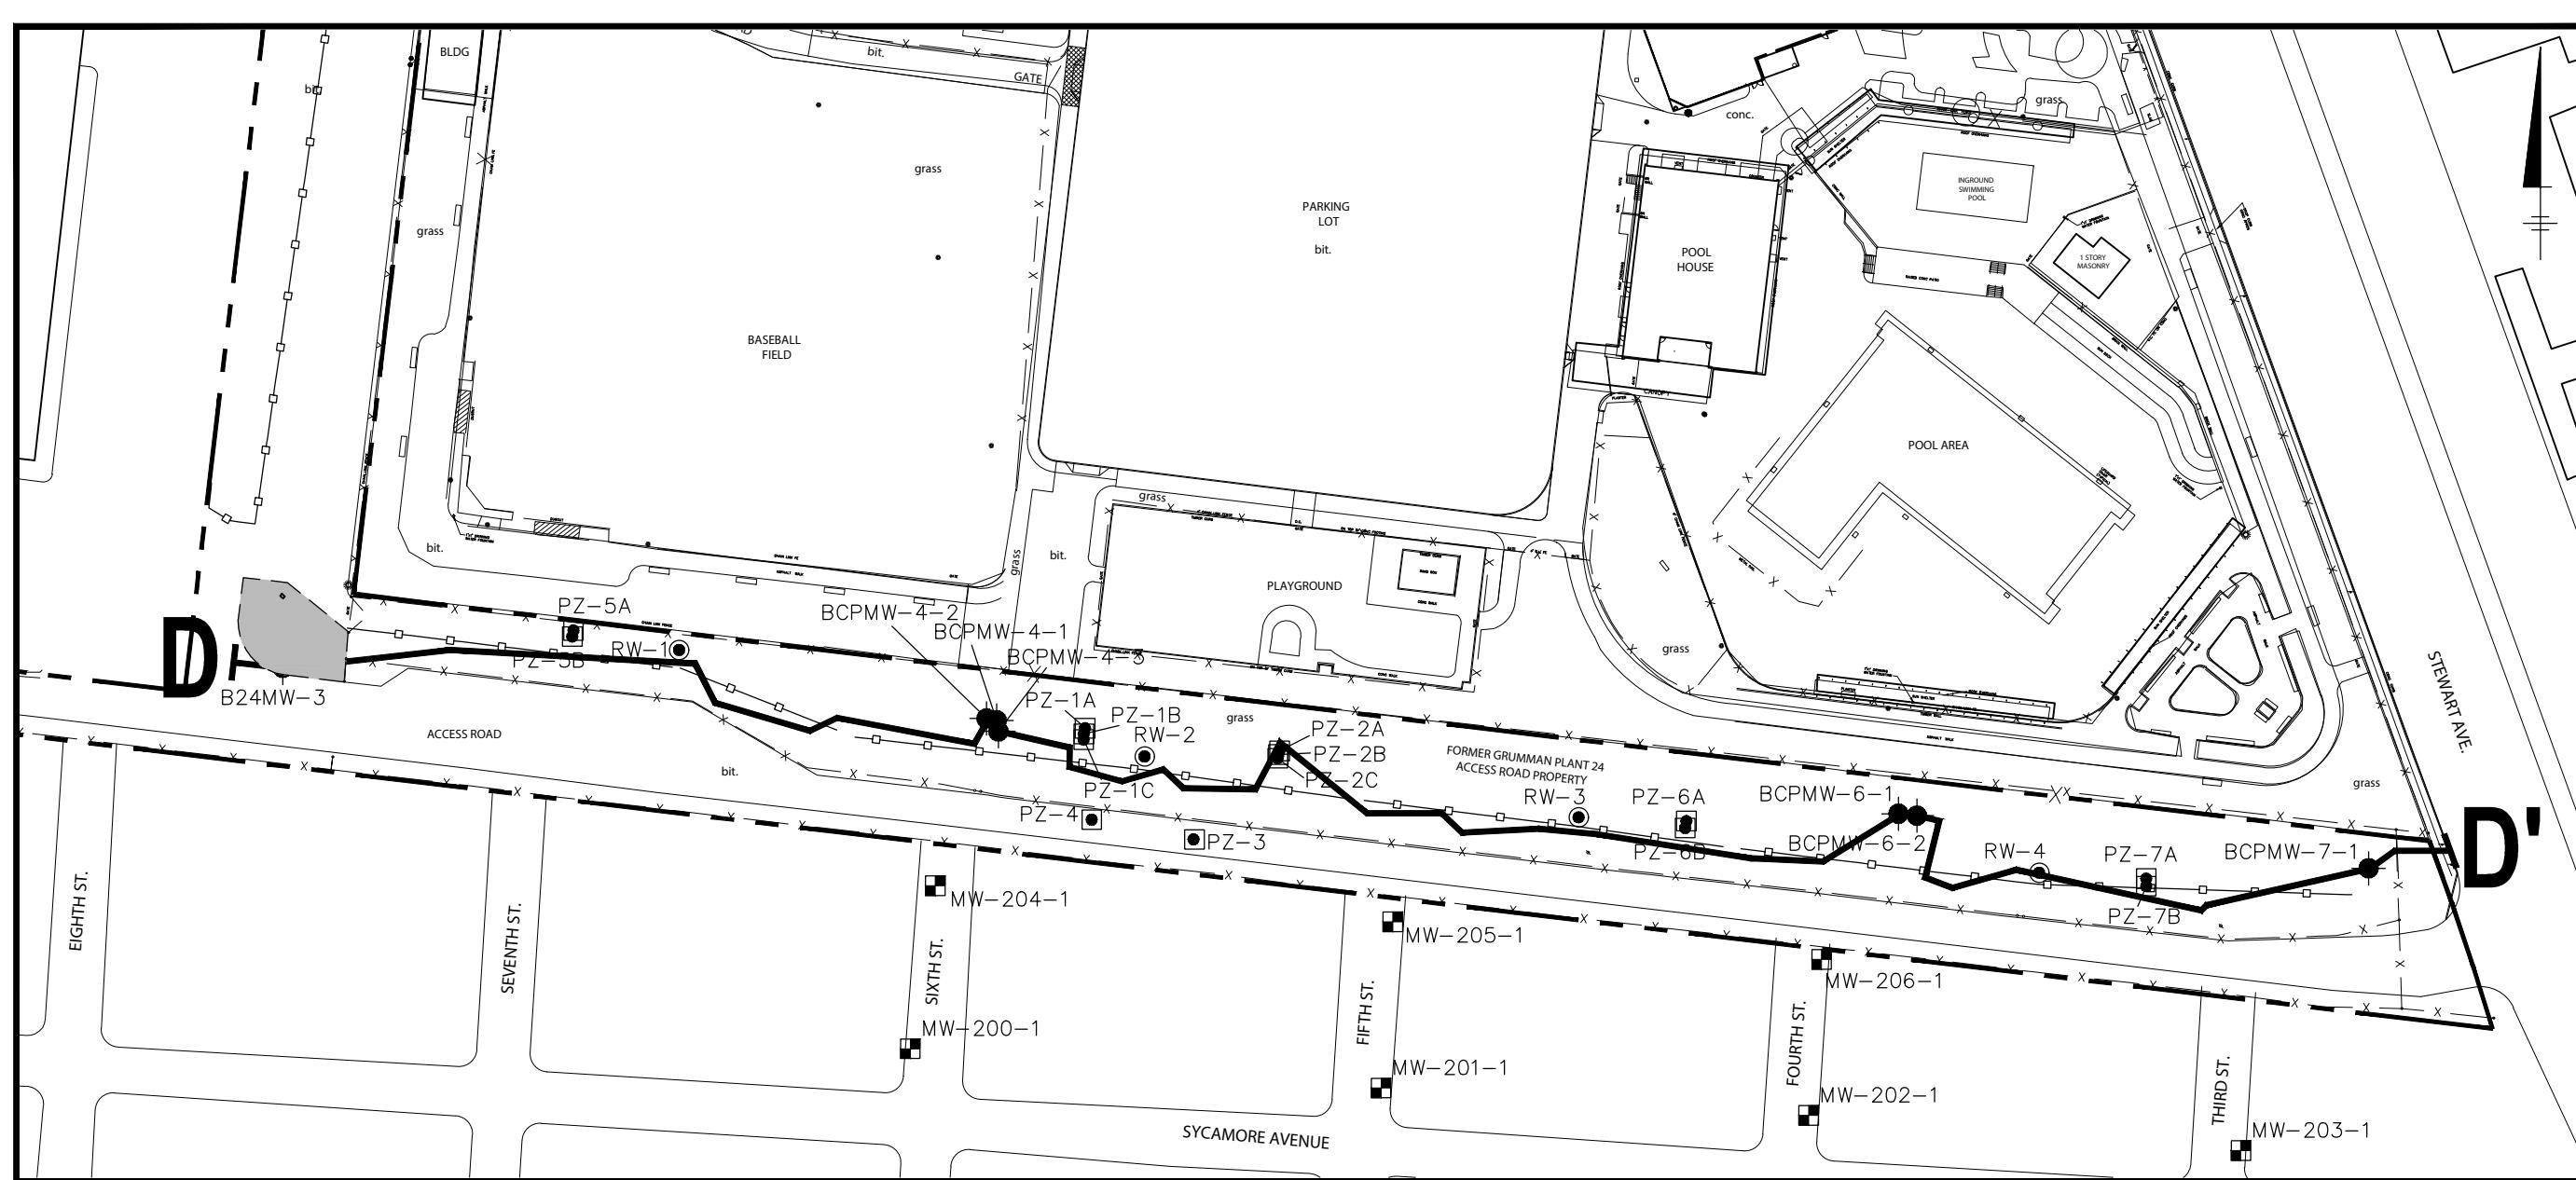

NOTE

1. WATER LEVEL ELEVATIONS CALCULATED FROM DATA COLLECTED DURING QUARTER 3, 2022.
 2. WELL TVOC/PROJECT TVOC DATA FROM THE JULY AND AUGUST 2022 SAMPLING ROUND. RESULT REPRESENTATIVE OF ENTIRE WELL SCREEN INTERVAL.
 3. TVOC CONTOURS ARE BASED ON PROJECT TVOC DATA, SEE NOTES 2 AND 5.
 4. APPROXIMATE DOWNGRADIENT EXTENT OF CAPTURE ZONE IS SOUTH OF WELLS MW-200-1, MW-201-1, MW-202-1, AND NORTH OF MW-203-1, SEE FIGURE 9.
 5. PROJECT VOCs ARE VOCs THAT MAY BE RELATED TO FORMER GRUMMAN HISTORICAL ACTIVITIES. NON-PROJECT VOCs ARE VOCs THAT ARE NOT RELATED TO FORMER GRUMMAN ACTIVITIES BUT HAVE BEEN DETECTED IN THE SITE AREA. PLEASE REFER TO THE REPORT TABLES FOR LISTS OF PROJECT AND NON-PROJECT VOCs.
 6. REFER TO TABLE 3 FOR PUMPING RATES OF REMEDIAL WELLS.

KEY PLAN
SHOWING CROSS SECTION D-D'

 APPROXIMATE SCALE IN FEET

EXPLANATION

The diagram illustrates a borehole profile with various layers and specific measurements:

- Designation:** MW-205-1 RW-1
- Land Surface:** Indicated by a horizontal line.
- Borehole:** A vertical line representing the borehole.
- Approximate Water Table (August 3, 2021):** Indicated by a dashed blue line at approximately 71.57 ft MSL.
- Top of Monitoring Well/Thermometer Screen (ft BLS):** 65'
- Monitoring Well Screen:** Located between 65' and 71.57' MSL.
- Groundwater Elevation (ft MSL):** 71.57
- Project TVOC Concentration in µg/L:** 0
- TVOC Concentration in µg/L:** 0
- Bottom of Monitoring Well/Thermometer Screen (ft BLS):** 75'
- Top of Recovery Well Screen (ft BLS):** 110'
- Recovery Well Screen:** Located between 110' and 130' BLS.
- Bottom of Recovery Well Screen:** 130'
- Total Depth of Boring (ft BLS):** 133'
- End of Boring:** Indicated at the bottom of the borehole profile.

**VERTICAL SCALE IN FEET
EXAGGERATION: 4x**

HORIZONTAL SCALE IN FEET

DEFINITIONS:

- FT - FEET
- MSL - MEAN SEA LEVEL
- BLS - BELOW LAND SURFACE
- µg/L - MICROGRAMS PER LITER
- TVOC - TOTAL VOLATILE ORGANIC COMPOUNDS
- NM - NOT MEASURED
- ND - NON DETECT
- NA - NOT APPLICABLE

LEGEND:

- GROUNDWATER ELEVATION CONTOUR IN FEET RELATIVE TO MEAN SEA LEVEL, DASHED WHERE LESS CONTROL AVAILABLE
- VERTICAL DIRECTION OF GROUNDWATER FLOW
- PROJECT TVOC CONTOUR IN µg/L, DASHED WHERE LESS CONTROL AVAILABLE

Notes and Abbreviations on Last Page

Notes and Abbreviations:

- (1) Water samples will be collected and analyzed in accordance with the method and procedures described in the BPGWCS OM&M Manual (Arcadis 2016) .
- (2) Approximate locations of the wells and piezometers in the OU3 BPGWCS Monitoring Program are shown in Figure 4.
- (3) Water Levels will be measured in all wells/piezometers during the baseline monitoring event in accordance with the procedures presented in the BPGWCS OM&M Manual (Arcadis 2016) .
- (4) See BPGWCS OM&M Manual (Arcadis 2016) for details of water quality analysis.
- (5) Semiannual wells will be monitored annually after Year 1.
- (7) Wells installed by ERM in 2015.
- (8) Wells installed by EMAGIN in 2017.

ECU #4 Influent (PI-602)	Pressure (i.w.g.)	Quarterly	NA
System Effluent (PI-603)	Pressure (i.w.g.)	Quarterly	NA

Notes:

- (1) Refer to Appendix E of the Operation, Maintenance and Monitoring Manual for a diagram showing referenced sample locations and measurement points.
- (2) Parameters/methods may be modified based on review of short-term and/or long-term testing results. Parameters shown in **Bold** indicate parameters that require NYSDEC notification/approval prior to change in monitoring schedule.
- (3) Long-term schedule is tentative. Modification may be required/recommended based on the results of water quality trends.
- (4) Samples will be analyzed in accordance with the methods and procedures described in the Sampling and Analysis Plan.
- (5) Additional air samples will be collected to help calculate media usage rates and to help determine media changeout frequencies.

Abbreviations, Notes and Units:

- (1) Refer to Figure 3 of this Operation, Maintenance, & Monitoring (OM&M) Report and Appendix E of the Groundwater IRM OM&M Manual (OM&M Manual (ARCADIS 2009)) for a diagram showing referenced sample locations and measurement points.
- (2) Parameters/methods may be modified based on review of short-term and/or long-term testing results. Parameters shown in **Bold** indicate parameters that require NYSDEC notification/approval prior to change in monitoring schedule.
- (3) Short-term schedule is tentative. Modification may be required/recommended based on the results of start-up and performance testing.
- (4) Long-term schedule is tentative. Modification may be required/recommended based on the results of short-term testing or water quality trends.
- (5) Water samples will be collected in accordance with the methods described in the Sampling and Analysis Plan, which is included as Appendix A of the OM&M Manual (ARCADIS 2009). Samples will be analyzed in accordance with the methods and procedures described in the Sampling and Analysis Plan.
- (6) Per NYSDEC request, a 1-hr pilot test was performed during system shake-down. The 1-hr pilot test samples were also analyzed for Mercury (Hg).
- (7) Per the interim treated effluent (water) discharge criteria provided in the NYSDEC letter dated March 19, 2009, select samples were analyzed for Mercury (Hg).
- (8) As authorized by the NYSDEC, the pH monitoring frequency was reduced from weekly to monthly beginning on February 8, 2010.
- (9) Air samples collected and analyzed in accordance with methods described in the Sampling and Analysis Plan, which is included as Appendix A of the OM&M Manual (ARCADIS 2009).
- (10) Additional air samples will be collected to help calculate media usage rates and to help determine media changeout frequencies.
- (11) Cadmium and Chromium analyses are part of the Environmental Effectiveness Monitoring Program (Table A-1) and the original discharge permit application. They are included here for consistency.
- (12) As of July 11 2018, 1,4-Dioxane is analyzed per USEPA Method 8270-SIM-CLLE.
- (13) As of November 2017, plant effluent was analyzed for permit equivalency Volatile Organic Compounds (VOCs) using USEPA Method 624; Total Nitrogen is calculated as the sum of Nitrogen, (Nitrate+Nitrite) and Total Kjeldahl Nitrogen (TKN), (CAS number: 14797-55-8, 14797-65-0, and 7727-37-9, respectively) by USEPA Methods 353.2 and 351.2, respectively; Total Iron and Manganese using USEPA Method 200.7.

ECU	Emissions Control Unit
EPA	U.S. Environmental Protection Agency
NA	Not Applicable
---	Not Required
NYSDEC	New York State Department of Environmental Conservation
OM&M	Operation, Maintenance and Monitoring
SCADA	Supervisory Control And Data Acquisition
