Description:
This modification merely moves the capping conditions from the State Only Enforceable section of the permit over to the Federal Enforceable side in order to ensure that the conditions are federally enforceable and that the facility is truly a synthetic minor.

This permit modification reflects changes, initiated by the Department, to the current State Facility Air Permit to accommodate additional reporting requirements resulting from the newly effective Applicable Federal Requirement: 40CFR 63.12281(d)(3)(i)(C'), Subpart HHH. These changes go into effect as of March 15, 2000.

Initial State Facility Air Permit for this facility, which consists of three internal combustion engines and two dehydrators that are used in the operation of a natural gas storage facility. This permit contains federally enforceable conditions that limit the facility's emissions of Oxides of Nitrogen (NOx) to below the threshold of Title V and Part 227-2 NOxRACT.

Mod 4/FINAL
By acceptance of this permit, the permittee agrees that the permit is contingent upon strict compliance with the ECL, all applicable regulations, the General Conditions specified and any Special Conditions included as part of this permit.

The following actions and recordkeeping and reporting requirements must be adhered to in such circumstances.

(a) The facility owner and/or operator shall compile and maintain records of all equipment maintenance or start-up/shutdown activities when they can be expected to result in an exceedance of any applicable emission standard, and shall submit a report of such activities to the commissioner's representative when requested to do so in writing or when so required by a condition of a permit or certificate issued for the corresponding air contamination source. Such reports shall describe why the violation was unavoidable and shall include the time, frequency and duration of the maintenance and/or start-up/shutdown activities and the identification of air contaminants, and the estimated emission rates. If a facility owner and/or operator is subject to continuous stack monitoring and quarterly reporting requirements, he need not submit reports for equipment maintenance or start-up/shutdown for the facility to the commissioner's representative.

Within 30 days thereafter, when requested in writing by the commissioner's representative, the facility owner and/or operator shall submit a written report to the commissioner's representative describing the malfunction, the corrective action taken, identification of air contaminants, and an estimate of the emission rates.

(c) The Department may also require the owner and/or operator to include in reports described under (a) and (b) above an estimate of the maximum ground level concentration of each air contaminant emitted and the effect of such emissions depending on the deviation of the malfunction and the air contaminants emitted.
(d) In the event of maintenance, start-up/shutdown or malfunction conditions which result in emissions exceeding any applicable emission standard, the facility owner and/or operator shall take appropriate action to prevent emissions which will result in contravention of any applicable ambient air quality standard. Reasonably available control technology, as determined by the commissioner, shall be applied during any maintenance, start-up/shutdown or malfunction condition subject to this paragraph.
