**SUBJECT: SOIL VAPOR EXTRACTION CONTAINMENT SYSTEM  
SITE 1, FORMER DRUM MARSHALLING YARD  
NWIRP BETHPAGE, NY  
QUARTERLY OPERATIONS REPORT  
THIRD QUARTER 2010**

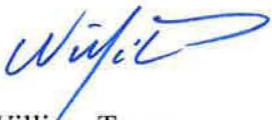

Dear Mr. Scharf:

In accordance with operational requirements, ECOR Federal Services, LLC. (ECOR) on behalf of the United States Department of the Navy (Navy), is submitting this quarterly operations report for the Site 1 Soil Vapor Extraction Containment System (SVECS) for the third quarter 2010.

During the evaluation of the VOC results from individual SVE wells versus the VOCs in the combined stream at the treatment system, a discrepancy was observed. Specifically, the individual well results were much lower than the combined stream results. Sample collection of systems operating under a vacuum can be complicated and there is always a potential for ambient air infiltration. During the next round of sampling, the procedure will be evaluated and modified to ensure that representative samples are collected.

Please do not hesitate contact me with any questions regarding this report at office phone # 610-840-9200 or via email at [torres@ecor-solutions.com](mailto:torres@ecor-solutions.com)

Sincerely,  
ECOR Federal Service, LLC.

  
William Torres  
Project Manager

## **1.0 INTRODUCTION**

ECOR Federal Services, LLC (ECOR) has prepared this Quarterly Operations Report for the Soil Vapor Extraction Containment System (SVECS) at Site 1, Former Drum Marshalling Yard, at the Naval Weapons Industrial Reserve Plant (NWIRP) in Bethpage, New York, for the United States Department of the Navy (Navy), Naval Facilities Engineering Command (NAVFAC), Mid-Atlantic, under Contract No. N62472-05-D-0031 Contract Task Order No. 005. The SVECS is an interim action to address migration of chlorinated volatile organic compounds (VOCs) in contaminated soil vapors.

### **1.1 Site Location**

NWIRP Bethpage is located in east central Nassau County, Long Island, New York, approximately 30 miles east of New York City. The Navy's property totaled approximately 109.5 acres and was formerly a Government Owned Contractor-Operated (GOCO) facility that was operated by the Northrop Grumman Corporation (NGC) until September 1998. NWIRP Bethpage is bordered on the north, west, and south by property owned, or formerly owned, by NGC that covered approximately 605 acres, and, on the east, by a residential neighborhood. Site 1 (see **Figures 1** and **Figure 2**) lies within the fenced area of NWIRP Bethpage and is located east of Plant No. 3, west of 11th Street and north of Plant 17 South.

### **1.2 Background**

NWIRP Bethpage was established in 1941. Since inception, the primary mission of the facility has been the research, prototyping, testing, design engineering, fabrication, and primary assembly of military aircraft. Historical operations that resulted in hazardous material generation at the facility included metal finishing processes, maintenance operations, painting of aircraft and components, and other activities that involve aircraft manufacturing. Wastes generated by plant operations were disposed directly into either drainage sumps, dry wells, and/or on the ground surface, resulting in the disposal of a number of hazardous wastes, including VOCs, semivolatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and the inorganic analytes, chromium and cadmium at the site. Some of these contaminants have migrated from the points of disposal to surrounding areas, including the soils of these sites and the groundwater beneath and downgradient of the NWIRP Bethpage property. NWIRP Bethpage is currently listed by NYSDEC as an “inactive hazardous waste site” (#1-30-003B),

Soils at Site 1 consist mainly of unconsolidated sediments that overlie crystalline bedrock. A clay unit is present near the groundwater table [50 feet below ground surface (bgs)] at the southeast corner of the site. This clay unit is suspected to be a source of chlorinated solvents that are migrating into the overlying soil gas and the source of offsite VOCs in soil vapor.

Chlorinated solvents including trichloroethene (TCE), tetrachloroethene (PCE), and 1,1,1-trichloroethane (TCA) have been identified as the VOCs of interest in soil gas at the site. Concentrations greater than 1,000 µg/m<sup>3</sup> (micrograms per cubic meter of soil vapor) have been directly associated with Site 1 activities and historical environmental data, and based on preliminary screening, exceed guidelines established by the New York State Department of Health (NYDOH) for subslab soil vapor concentrations. Of these chemicals, TCE is the primary VOC of concern. Addressing TCE contamination in accordance with DOH guidance should address the other VOCs associated with the site. PCBs, cadmium, and chromium have also been identified in site soils at concentrations requiring remediation.

The majority of these chemicals have been detected in the central portion of Site 1 and will be addressed via a future remediation. Based on limited data, these chemicals are not expected to be present along the fence line at environmentally significant concentrations (i.e., trigger handling as hazardous waste).

### 1.3 Project Overview and Objective

The remedial objective for this project is to use an on-site soil vapor extraction system to prevent further off-site migration of VOC contaminated soil vapor and to the extent practical, capture contaminated soil vapor with a TCE concentration greater than 250 µg/m<sup>3</sup>. A secondary objective of this project is to address soil vapor with a TCE concentration greater than 5 µg/m<sup>3</sup>. The SVECS has been designed for a 4 year operational life.

### 1.4 SVECS Overview

The SVECS consists of soil vapor extraction, soil vapor monitoring, and soil vapor treatment. Twelve SVE wells are located along the eastern boundary of Site 1 in six clusters and have been piped below the ground to the Flow Monitoring Station (FMS), where flow, vacuum and vapor quality can be monitored. The FMS consists of an 8 ft wide x 8 ft tall x 20 ft long Conex box located in the southeast corner of Site 1. All the SVE lines collect into a single manifold within the FMS and from this location a single underground pipeline has been routed to the Treatment Building (Building 03-35).

The Treatment Building is an existing unoccupied building 31 ft wide x 60 ft long. The soil vapor treatment consists of moisture separation and off-gas treatment using vapor-phase granular activated carbon to remove the chlorinated VOCs. The layout of the SVECS is shown on **Figure 3**.

A Process Flow Diagram is presented in **Figure 4**, and illustrates the design flow rates through the soil vapor extraction and treatment process. The SVECS has been designed to process a nominal flow of 500 cubic feet per minute (cfm) and a maximum flow of 1,000 cfm of soil vapor extracted from six intermediate and six deep SVEWs. Prior to implementation of the SVECS, the mean concentrations of VOCs in soil gas samples collected along the eastern fence-line were 41,128 µg/m<sup>3</sup> of trichloroethene, 381 µg/m<sup>3</sup> of tetrachloroethene, and 20,634 µg/m<sup>3</sup> of 1,1,1-trichloroethane. The maximum concentration of VOCs in the soil gas samples were 180,000 µg/m<sup>3</sup> of trichloroethene, 1,200 µg/m<sup>3</sup> of tetrachloroethene, and 90,000 µg/m<sup>3</sup> of 1,1,1-trichloroethane. With the exception of maintenance and adjustment periods, the SVECS is expected to operate continuously 24 hours/day, 7 days/week for approximately four years.

The soil vapor extraction system consists of twelve SVE wells with 2-inch outside diameter Schedule 40 PVC risers and 0.020 high capacity machine slotted screens, installed in six clusters, each consisting of one intermediate well and one deep well. Intermediate wells SVE-101I, SVE-102I, SVE-103I, SVE-104I, SVE-105I, and SVE-106I have a screened interval between 25 and 35 ft below ground surface (bgs). Deep wells SVE-101D, SVE-102D, SVE-103D, SVE-104D, SVE-105D, and SVE-106D have a screened interval between 40 and 60 ft bgs. The groundwater table fluctuates between approximately 50 and 55 feet bgs. Well locations are presented in **Figure 5**. Each SVE well is operated at a flow rate of 40- 45 cfm for a total flow rate of 475 - 550 cfm. Each intermediate depth SVE well requires a vacuum of 4 inches of water column (i.w.) and each deep SVEW requires a vacuum of up to 20 i.w. in order to extract the targeted flow rates.

All of the piping for the SVECS is Schedule 40 PVC. Piping from the SVE wells to the FMS is approximately 3,600 linear feet and piping from the Flow Monitoring Station to the Treatment Building is approximately 1,400 linear feet. Within the FMS, the discharges from the individual SVEWs have been equipped with a 2-inch flow control butterfly valve, a vacuum gauge, and a sampling port. The sampling port is utilized to measure the flow rate from an individual well using a portable velocity meter and to collect a vapor quality sample.

The soil vapor treatment system is housed within Building 03-35 and consists of a moisture separator, two soil vapor extraction blowers, and vapor-phase granular activated carbon (VGAC) unit for removal of chlorinated VOCs from the off-gas. Soil vapor that enters the Treatment Building first passes through the moisture separator tank where any condensate is separated and removed by a portable pump into 55-gallon drums and then disposed of onsite to the county's sanitary sewer system if necessary. The vapor is then passed through an air filter by the soil vapor extraction blower and then treated in the VGAC unit. The treated vapor is discharged from the VGAC via an exhaust stack. The SVECS has a control panel for local operation. The control panel is comprised of mechanical interlocks and relays.

The moisture separator tank is a 1,000 gallon, 5 ft diameter x 4 ft high side shell carbon steel tank with a corrosion resistant coating and visual sight glass. It has an integral vacuum relief valve and is equipped with a high condensate level sensor/switch.

The VGAC unit is a 6 ft wide x 8 ft long x 6.67 ft high carbon steel rectangular tank containing 5,000 lbs of vapor-phase granular activated carbon. It is designed to operate at a nominal flow rate of 500 cfm with a corresponding pressure drop of 3 i.w. and a maximum flow rate of 1,000 cfm with a corresponding pressure drop of 5 i.w.

The off-gas from the SVECS is monitored for chlorinated VOCs as identified in the DAR permit equivalent effluent limitations and monitoring requirements. The samples are analyzed by an analytical laboratory for tetrachloroethene, 1,1,1-trichloroethane, and trichloroethene.

## **2.0 SVECS OPERATION AND MAINTENANCE**

While designed to run completely automated, the SVECS requires regular visits by an operator to record and adjust operational parameters and to perform scheduled maintenance. The SVECS is equipped with an auto dialer that will call an on-call operator in the event of a plant shutdown.

### **2.1 Routine Maintenance Activities**

Routine maintenance activities at the SVECS during the quarter were performed during the operator's bi-weekly visits. These activities include general site inspections (the grounds, buildings, doors and locks), collection of operational data (vapor flowrates, pressures, vacuums, temperature and PID readings), adjustment of system valves, collection of vapor samples, collection/disposal of condensate, cleaning of filters, switching of lead/lag blower assignments, and preventive maintenance of system equipment.

## **2.2 Non-routine Maintenance Activities**

Only routine maintenance activities were performed during the Third Quarter 2010 and no alarm responses were required.

While sewer discharge approval is in place to dispose of any condensation recovered from the moisture separator, during the reporting period, no such disposal was needed.

## **3.0 SVECS MONITORING**

To monitor SVECS effectiveness, several process vapor samples are collected on a monthly basis including two influent samples, located immediately prior to the VGAC unit and one effluent sample located after the VGAC unit and before the exhaust stack. In addition, vapor samples are collected from all 12 SVEWs on a quarterly basis to determine the effectiveness of the remediation activities and monitor the hydraulic containment and capture of the contaminated soil vapor by the intermediate and deep extraction wells.

### **3.1 Monthly Air Quality Monitoring**

Sampling and monitoring of influent and effluent locations are performed to evaluate VOC mass removal and the effectiveness of the vapor-phase granular activated carbon adsorption unit. Composite vapor samples are collected using 6L summa canisters with one hour flow regulators. NYSDEC discharge limits are as follows below:

Contaminant	Discharge limit	
	(lbs/hr)	(lbs/yr)
Trichloroethylene	0.07	590.6
Tetrachloroethylene	0.0009	7.9
1,1,1-Trichloroethane	0.13	1,181

A summary of monthly vapor sampling results performed during the Third Quarter 2010 is presented in **Tables 1-3**. Raw analytical data is presented in **Appendix A**. Also presented in **Tables 1-3** are emission rate calculations for both prior to, and following treatment, as well as, estimated mass removals via carbon adsorption. The data demonstrates that all permitted constituents were in compliance for the quarter. Emission rate calculation of the influent stream is important because it can be used to determine when influent concentrations have reached levels in which vapor treatment via carbon adsorption is no longer required.

### **3.2 Quarterly Air Quality Monitoring**

Once per calendar quarter, composite vapor samples are collected using 6L summa canisters with one hour flow regulators at all 12 intermediate and deep SVE wells. It should be noted that this sampling is for the purpose of tracking and documenting the performance of SVECS at maintaining hydraulic containment and capturing the contaminated soil vapor operations.

A summary of analytical results of the quarterly SVE well vapor samples collected during the Third Quarter 2010 are presented in **Table 4**. Raw analytical data is presented in **Appendix A**.

#### NOTES:

1. FOR WELL DETAILS SEE DRAWING C-5.
2. A TOTAL OF TWELVE SVE WELLS SHALL BE USED FOR VAPOR EXTRACTION. SVE-1011 AND SVE-101D ARE EXISTING AND OTHERS SHALL BE INSTALLED DURING CONSTRUCTION PHASE. THE SVE WELLS SHALL BE SCREENED AT INTERMEDIATE DEPTHS (25-30 FT) AND DEEP DEPTHS (40-60 FT). SEE DETAIL NOS. 4 AND 5 ON DRAWING NO. C-5 FOR SVE WELL DETAILS.
3. A TOTAL OF NINE SOIL VAPOR PRESSURE MONITORS SHALL BE USED TO MEASURE TREATMENT SYSTEM VACUUMS. SVPM-2004 AND SVPM-2004D SHALL BE INSTALLED DURING CONSTRUCTION PHASE. SOIL VAPOR PRESSURE MONITORS SVPM-2002S, I & D, SVPM-2003S & I AND SVPM-2007 & D ARE EXISTING BUT MUST BE REDEVELOPED BY REMOVING FILLED SAND (NO. 2) AND INSTALLATION OF PERMANENT FLUSH MOUNT CASING. SEE DETAIL NOS. 6, 7 AND 8 ON DRAWING NO. C-5 FOR SVPM DETAILS.

Mr. Matt Lapp  
ECOR Solutions  
440 Creamery Way  
Suite 150  
Exton, PA 19341

July 30, 2010

Dear Mr. Lapp,

Enclosed are the analytical results for samples received by the laboratory on Friday, July 23, 2010

ALSI is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Tonya Hironimus (Project Coordinator) or Anna G Milliken (Laboratory Manager) at (717) 944-5541.

Please visit us at [www.analyticallab.com](http://www.analyticallab.com) for a listing of ALSI's NELAP accreditations and Scope of Work, as well as other links to Water Quality documentation on the internet.

This laboratory report may not be reproduced, except in full, without the written approval of ALSI.

NOTE: ALSI has changed the report generation tool and while we have tried to retain the existing format, you will notice some changes in the laboratory report. Please feel free to contact ALSI in case you have any questions.

### Workorder Comments:

#### Notes

- Samples collected by ALSI personnel are done so in accordance with the procedures set forth in the ALSI Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.

#### Standard Acronyms/Flags

J, B	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference

## ANALYTICAL RESULTS QUALIFIERS\FLAGS

Workorder: 9856591 EBE001|BETHPAGE Sit 1

---

### PARAMETER QUALIFIERS\FLAGS

- [1] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Naphthalene. The % Recovery was reported as 45 and the control limits were 70 to 130.
- [2] The QC sample type LCSD for method TO-15 was outside the control limits for the analyte Naphthalene. The % Recovery was reported as 48.5 and the control limits were 70 to 130.
- [3] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,2,4-Trichlorobenzene. The % Recovery was reported as 53.4 and the control limits were 70 to 130.
- [4] The QC sample type LCSD for method TO-15 was outside the control limits for the analyte 1,2,4-Trichlorobenzene. The % Recovery was reported as 58.9 and the control limits were 70 to 130.

## Certificate of Analysis

Project Name: **BETHPAGE-NY**

Workorder: **9861460**

Purchase Order:

Workorder ID: **Site 1 Bethpage NY**

Mr. Matt Lapp  
ECOR Solutions  
440 Creamery Way  
Suite 150  
Exton, PA 19341

August 27, 2010

Dear Mr. Lapp,

Enclosed are the analytical results for samples received by the laboratory on Friday, August 20, 2010

ALSI is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Tonya Hironimus (Project Coordinator) or Anna G Milliken (Laboratory Manager) at (717) 944-5541.

Please visit us at [www.analyticallab.com](http://www.analyticallab.com) for a listing of ALSI's NELAP accreditations and Scope of Work, as well as other links to Water Quality documentation on the internet.

This laboratory report may not be reproduced, except in full, without the written approval of ALSI.

NOTE: ALSI has changed the report generation tool and while we have tried to retain the existing format, you will notice some changes in the laboratory report. Please feel free to contact ALSI in case you have any questions.

Analytical Laboratory Services, Inc.

*This page is included as part of the Analytical Report and must be retained as a permanent record thereof.*

## SAMPLE SUMMARY

Workorder: 9861460 Site 1 Bethpage NY

Discard Date: 09/10/2010

Lab ID	Sample ID	Matrix	Date Collected	Date Received	Collected By
9861460001	SVE TI - 081910-01	Air	8/19/10 13:00	8/20/10 09:25	Customer
9861460002	SVE TI - 081910-02	Air	8/19/10 14:00	8/20/10 09:25	Customer
9861460003	SVE TE - 081910	Air	8/19/10 12:30	8/20/10 09:25	Customer

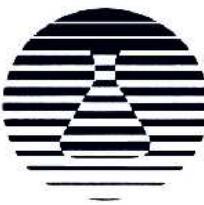

### Workorder Comments:

#### Notes

- Samples collected by ALSI personnel are done so in accordance with the procedures set forth in the ALSI Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.

#### Standard Acronyms/Flags

J, B	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference

## Certificate of Analysis

Project Name: **BETHPAGE-NY**

Workorder: **9866056**

Purchase Order:

Workorder ID: **EBE003|BETHPAGE-NY**

Mr. Matt Lapp  
ECOR Solutions  
440 Creamery Way  
Suite 150  
Exton, PA 19341

October 8, 2010

Dear Mr. Lapp,

Enclosed are the analytical results for samples received by the laboratory on Friday, September 17, 2010

ALSI is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Tonya Hironimus (Project Coordinator) or Anna G Milliken (Laboratory Manager) at (717) 944-5541.

Please visit us at [www.analyticallab.com](http://www.analyticallab.com) for a listing of ALSI's NELAP accreditations and Scope of Work, as well as other links to Water Quality documentation on the internet.

This laboratory report may not be reproduced, except in full, without the written approval of ALSI.

NOTE: ALSI has changed the report generation tool and while we have tried to retain the existing format, you will notice some changes in the laboratory report. Please feel free to contact ALSI in case you have any questions.

Analytical Laboratory Services, Inc.

*This page is included as part of the Analytical Report and must be retained as a permanent record thereof.*

### Workorder Comments:

#### Notes

- Samples collected by ALSI personnel are done so in accordance with the procedures set forth in the ALSI Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.

#### Standard Acronyms/Flags

J, B	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference

4-Bromofluorobenzene (S)	101	%		70-130		TO-15			9/28/10 01:31	JSS A
4-Bromofluorobenzene (S)	116	%		70-130		TO-15			9/29/10 21:26	JEA A

### Sample Comments:

One or more of the TO-15 internal standards were recovered slightly below set criteria. The surrogate was within control limits.  
Sample data does not appear to be impacted. JDA 9/30/10

4-Bromofluorobenzene (S)	108	%		70-130		TO-15		10/1/10 07:37	JSS	A

### Sample Comments:

This sample was run at a 2x dilution due to insufficient sample volume. JSS 10/1/10.

The second and third internal standard were recovered below the set criteria in the TO15 analysis of this sample. Matrix effect is believed to have caused this failure. Comparable results were attained from a replicate sample run. JSS 10/1/10.

4-Bromofluorobenzene (S)	108	%		70-130		TO-15			9/30/10 19:06	JSS A

### Sample Comments:

This sample was run at a 2x dilution due to insufficient sample volume. JSS 10/1/10.

4-Bromofluorobenzene (S)	110	%		70-130		TO-15			9/30/10 19:51	JSS A

### Sample Comments:

This sample was run at a 2x dilution due to insufficient sample volume. JSS 10/1/10.

4-Bromofluorobenzene (S)	101	%		70-130		TO-15		9/28/10 08:22	JSS	A

### Sample Comments:

This sample was run at a 3.23x dilution due to insufficient volume of sample submitted. JSS 9/29/10.

4-Bromofluorobenzene (S)	123	%		70-130		TO-15		10/1/10 08:22	JSS	A

### Sample Comments:

The internal standards were recovered below the set criteria in the TO15 analysis of this sample. Matrix effect is believed to have caused this failure. Comparable results were attained from a replicate sample run. JSS 10/1/10.

Anna G Milliken

## ANALYTICAL RESULTS QUALIFIERS\FLAGS

Workorder: 9866056 EBE003|BETHPAGE-NY

### PARAMETER QUALIFIERS\FLAGS

- [1] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Acetone. The % Recovery was reported as 202 and the control limits were 60 to 140.
- [2] The QC sample type LCS for method TO-15 was outside the control limits for the analyte cis-1,2-Dichloroethene. The % Recovery was reported as 144 and the control limits were 60 to 140.
- [3] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Diisopropyl ether. The % Recovery was reported as 25.5 and the control limits were 60 to 140.
- [4] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Ethanol. The % Recovery was reported as 176 and the control limits were 60 to 140.
- [5] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Methylene Chloride. The % Recovery was reported as 24.6 and the control limits were 60 to 140.
- [6] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Acetone. The % Recovery was reported as 204 and the control limits were 60 to 140.
- [7] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Dichlorodifluoromethane. The % Recovery was reported as 141 and the control limits were 60 to 140.
- [8] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Diisopropyl ether. The % Recovery was reported as 0 and the control limits were 60 to 140.
- [9] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Ethanol. The % Recovery was reported as 148 and the control limits were 60 to 140.
- [11] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Isopropyl Alcohol. The % Recovery was reported as 175 and the control limits were 60 to 140.
- [13]
- [14] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Propylene. The % Recovery was reported as 0 and the control limits were 60 to 140.
- [19] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Isopropyl Alcohol. The % Recovery was reported as 171 and the control limits were 60 to 140.
- [20] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Acetone. The % Recovery was reported as 175 and the control limits were 60 to 140.
- [21] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Chloromethane. The % Recovery was reported as 147 and the control limits were 60 to 140.
- [22] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Dichlorodifluoromethane. The % Recovery was reported as 143 and the control limits were 60 to 140.
- [23] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Diisopropyl ether. The % Recovery was reported as 153 and the control limits were 60 to 140.
- [24] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Ethanol. The % Recovery was reported as 167 and the control limits were 60 to 140.

## Certificate of Analysis

Project Name: **BETHPAGE-NY**

Workorder: **9866055**

Purchase Order:

Workorder ID: **EBE002|BETHPAGE-NY**

Mr. Matt Lapp  
ECOR Solutions  
440 Creamery Way  
Suite 150  
Exton, PA 19341

September 29, 2010

Dear Mr. Lapp,

Enclosed are the analytical results for samples received by the laboratory on Friday, September 17, 2010

ALSI is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Tonya Hironimus (Project Coordinator) or Anna G Milliken (Laboratory Manager) at (717) 944-5541.

Please visit us at [www.analyticallab.com](http://www.analyticallab.com) for a listing of ALSI's NELAP accreditations and Scope of Work, as well as other links to Water Quality documentation on the internet.

This laboratory report may not be reproduced, except in full, without the written approval of ALSI.

NOTE: ALSI has changed the report generation tool and while we have tried to retain the existing format, you will notice some changes in the laboratory report. Please feel free to contact ALSI in case you have any questions.

Analytical Laboratory Services, Inc.

**Notes**

- Samples collected by ALSI personnel are done so in accordance with the procedures set forth in the ALSI Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.

**Standard Acronyms/Flags**

J, B	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference

4-Bromofluorobenzene (S)	103	%		70-130		TO-15			9/27/10 23:16	JSS A

### Sample Comments:

This sample was run at a 3.57x dilution due to insufficient volume of sample submitted. JSS 9/29/10

## **ANALYTICAL RESULTS QUALIFIERS\FLAGS**

Workorder: 9866055 EBE002|BETHPAGE-NY

### **PARAMETER QUALIFIERS\FLAGS**

- [1] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Acetone. The % Recovery was reported as 184 and the control limits were 60 to 140.
- [2] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Acrylonitrile. The % Recovery was reported as 164 and the control limits were 60 to 140.
- [3] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Benzene. The % Recovery was reported as 156 and the control limits were 60 to 140.
- [4] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Bromodichloromethane. The % Recovery was reported as 163 and the control limits were 60 to 140.
- [5] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Bromoform. The % Recovery was reported as 144 and the control limits were 60 to 140.
- [6] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Bromomethane. The % Recovery was reported as 165 and the control limits were 60 to 140.
- [7] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,3-Butadiene. The % Recovery was reported as 152 and the control limits were 60 to 140.
- [8] The QC sample type LCS for method TO-15 was outside the control limits for the analyte n-Butane. The % Recovery was reported as 144 and the control limits were 60 to 140.
- [9] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 2-Butanone. The % Recovery was reported as 164 and the control limits were 60 to 140.
- [10] The QC sample type LCS for method TO-15 was outside the control limits for the analyte tert.- Butyl Alcohol. The % Recovery was reported as 159 and the control limits were 60 to 140.
- [11] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Carbon Disulfide. The % Recovery was reported as 171 and the control limits were 60 to 140.
- [12] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Carbon Tetrachloride. The % Recovery was reported as 165 and the control limits were 60 to 140.
- [13] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Chlorobenzene. The % Recovery was reported as 159 and the control limits were 60 to 140.
- [14] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Chlorodibromomethane. The % Recovery was reported as 149 and the control limits were 60 to 140.
- [15] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Chloroethane. The % Recovery was reported as 159 and the control limits were 60 to 140.
- [16] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Chloroform. The % Recovery was reported as 172 and the control limits were 60 to 140.
- [17] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Chloromethane. The % Recovery was reported as 168 and the control limits were 60 to 140.
- [18] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,2-Dibromoethane. The % Recovery was reported as 149 and the control limits were 60 to 140.

## ANALYTICAL RESULTS QUALIFIERS\FLAGS

Workorder: 9866055 EBE002|BETHPAGE-NY

### PARAMETER QUALIFIERS\FLAGS

- [19] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,2-Dichlorobenzene. The % Recovery was reported as 151 and the control limits were 60 to 140.
- [20] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,3-Dichlorobenzene. The % Recovery was reported as 144 and the control limits were 60 to 140.
- [21] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,4-Dichlorobenzene. The % Recovery was reported as 143 and the control limits were 60 to 140.
- [22] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Dichlorodifluoromethane. The % Recovery was reported as 170 and the control limits were 60 to 140.
- [23] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,1-Dichloroethane. The % Recovery was reported as 170 and the control limits were 60 to 140.
- [24] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,2-Dichloroethane. The % Recovery was reported as 171 and the control limits were 60 to 140.
- [25] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,1-Dichloroethene. The % Recovery was reported as 165 and the control limits were 60 to 140.
- [26] The QC sample type LCS for method TO-15 was outside the control limits for the analyte cis-1,2-Dichloroethene. The % Recovery was reported as 174 and the control limits were 60 to 140.
- [27] The QC sample type LCS for method TO-15 was outside the control limits for the analyte trans-1,2-Dichloroethene. The % Recovery was reported as 163 and the control limits were 60 to 140.
- [28] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,2-Dichloropropane. The % Recovery was reported as 163 and the control limits were 60 to 140.
- [29] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Diisopropyl ether. The % Recovery was reported as 193 and the control limits were 60 to 140.
- [30] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Ethanol. The % Recovery was reported as 180 and the control limits were 60 to 140.
- [31] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Ethyl Acetate. The % Recovery was reported as 152 and the control limits were 60 to 140.
- [32] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Freon 113. The % Recovery was reported as 173 and the control limits were 60 to 140.
- [33] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Freon-114. The % Recovery was reported as 165 and the control limits were 60 to 140.
- [34] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Hexachlorobutadiene. The % Recovery was reported as 160 and the control limits were 60 to 140.
- [35] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Hexane. The % Recovery was reported as 152 and the control limits were 60 to 140.
- [36] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Isopropyl Alcohol. The % Recovery was reported as 223 and the control limits were 60 to 140.

## ANALYTICAL RESULTS QUALIFIERS\FLAGS

Workorder: 9866055 EBE002|BETHPAGE-NY

### PARAMETER QUALIFIERS\FLAGS

- [37] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Methylene Chloride. The % Recovery was reported as 196 and the control limits were 60 to 140.
- [38] The QC sample type LCS for method TO-15 was outside the control limits for the analyte iso-Octane. The % Recovery was reported as 148 and the control limits were 60 to 140.
- [39] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,1,2,2-Tetrachloroethane. The % Recovery was reported as 153 and the control limits were 60 to 140.
- [40] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Tetrachloroethene. The % Recovery was reported as 148 and the control limits were 60 to 140.
- [41] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,1,1-Trichloroethane. The % Recovery was reported as 166 and the control limits were 60 to 140.
- [42] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,1,2-Trichloroethane. The % Recovery was reported as 161 and the control limits were 60 to 140.
- [43] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Trichloroethene. The % Recovery was reported as 151 and the control limits were 60 to 140.
- [44] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Trichlorofluoromethane. The % Recovery was reported as 162 and the control limits were 60 to 140.
- [45] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,2,3-Trichloropropane. The % Recovery was reported as 157 and the control limits were 60 to 140.
- [46] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Vinyl Acetate. The % Recovery was reported as 149 and the control limits were 60 to 140.
- [47] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Vinyl Bromide. The % Recovery was reported as 158 and the control limits were 60 to 140.
- [48] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Vinyl Chloride. The % Recovery was reported as 155 and the control limits were 60 to 140.
- [49] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Acetone. The % Recovery was reported as 175 and the control limits were 60 to 140.
- [50] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Chloromethane. The % Recovery was reported as 147 and the control limits were 60 to 140.
- [51] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Dichlorodifluoromethane. The % Recovery was reported as 143 and the control limits were 60 to 140.
- [52] The QC sample type LCS for method TO-15 was outside the control limits for the analyte 1,1-Dichloroethane. The % Recovery was reported as 142 and the control limits were 60 to 140.
- [53] The QC sample type LCS for method TO-15 was outside the control limits for the analyte cis-1,2-Dichloroethene. The % Recovery was reported as 148 and the control limits were 60 to 140.
- [54] The QC sample type LCS for method TO-15 was outside the control limits for the analyte Ethanol. The % Recovery was reported as 167 and the control limits were 60 to 140.
