Re: Firemen's Training Center (Site #1-30-042)
Post Termination Monitoring Program Sampling Results – Fall 2015

Dear Mr. Rung:

The Nassau County Department of Public Works has completed the Fall 2015 Semi-Annual Post Termination Monitoring round at the Nassau County Fire Service Academy (A.K.A. Firemen's Training Center) site. This program replaces the original termination monitoring program stipulated in the approved 1994 Remediation Monitoring Program for this site. The Post Termination Monitoring results for the revised group of offsite monitoring wells have been included herewith for your review.

The twelve (12) offsite PTM wells selected for sampling in the revised post-termination monitoring program have been divided into two groups for review. The first group has been designated as the ***FTC Core Wells***; and, it includes those monitoring wells (BP-2B, BP-4B, BP-12B, C) which are adjacent to and directly downgradient of the Nassau County Fire Service Academy (see map).

The second group has been designated the ***Eastern Plume wells***; and, these wells (MW-7Br, EW-14D, BP-3B,C, BP-15B,C, BP-10B,C) represent those wells which appear to have been impacted from unknown sources north and east of the original Nassau County Firemen's Training Center offsite monitoring well network and the former Offsite Recovery Well field.

Offsite Post Termination Monitoring Well Summary (FTC Core Wells)

Review of the groundwater sampling results obtained from the four (4) ***FTC Core Wells*** indicates that groundwater collected from these wells is below detectable limits (BDL) for all Volatile Organic Compounds (VOC's) tested; and, this includes the fifteen (15) volatile organic compounds designated for monitoring in the original Remediation Monitoring Plan (RMP) developed for the site in 1994.

Re: Firemen's Training Center (Site #1-30-042)
Post Termination Monitoring Program Sampling Results – May 2015

Post Termination Monitoring Well Summary (Eastern Plume Wells)

Review of the volatile organic compound results obtained from the group of *Eastern Plume Wells* (see map) indicates that all eight (8) wells have been impacted by varying concentrations of volatile organic compounds. The highest concentration of volatile organic compounds is found in monitoring well MW-7Br where a total of 995 ppb was measured. The lowest total volatile organic concentration was detected in monitoring well BP-10C where a total volatile organic compound concentration of 20 ppb was recorded. Please note Tert – Butyl Alcohol (TBA) was detected in monitoring wells BP-3B (15 ppb), BP-15B (23 ppb), BP-15C (21 ppb) and BP-10C at a concentration of 15 ppb.

The individual volatile organic compounds with the highest concentrations were Tetrachloroethylene (160 ppb/BP-3C), Trichloroethylene (915 ppb/MW-7Br) and Cis-1, 2 Dichloroethylene (87 ppb/BP-3C). The highest concentration and widest variety of compounds were detected in the "B" Hydrogeologic zone (-80 to -140 ft. below msl). A significantly lower number of compounds at lower concentration are found in the "C" Hydrogeologic zone (-180 to -240 ft. below msl).

If you require any additional information regarding this data, please contact Mr. Michael Flaherty, Hydrogeologist III at (516) 571-7514.

Very truly yours,

Shila Shah-Gavnoudias, P.E.
Commissioner of Public Works
