

NEW YORK STATE  
DEPARTMENT OF

ENVIRONMENTAL  
CONSERVATION

Dear Interested Citizen:

This fact sheet is to inform you that environmental remediation work at the TransTechnology site at One Robert Lane, Glen Head, New York is scheduled to commence in April 2008.

If you have any questions or would like more information, please contact:

Ms. Tara Diaz  
Project Manager  
NYSDEC

625 Broadway  
Albany, NY 12233-7015  
(518) 402-9621

or

Mr. William Fonda  
Citizen Participation  
Specialist  
NYSDEC

SUNY - Bldg. 40  
Stony Brook, NY 11790  
(631) 444-0350

For site related health questions, please contact the following representative of the New York State Department of Health (NYSDOH):

Ms. Renata Ockerby  
NYSDOH

Flanigan Square,  
547 River Street  
Troy, NY 12180-2216  
Phone: (518) 402-7880

## Clean Up to Start At Trans Technology Site OU-1 Site Soils

\* \* \*

### INTRODUCTION

The New York State Department of Environmental Conservation (NYSDEC) with support from the New York State Department of Health (NYSDOH), has selected a final remedy for the Trans Technology Inactive Hazardous Waste Site. The selected remedy is to remediate contaminated soils by means of excavation and Underground Injection Control (UIC) program closure.

The planned remediation work was discussed at a public meeting held at North Shore Middle School on March 9, 2006 and is described in the Record of Decision (ROD) issued by NYSDEC in June 2006. The design of the remediation is presented in the Remedial Design and Remedial Action Work Plan which was approved by the NYSDEC in June 2007. Both documents are available at the following locations:

### SITE DESCRIPTION AND BACKGROUND

The Trans Technology site is a 7 ¾-acre property, located in the northwest portion of Long Island, in Glen Head, Nassau County. The site is in a mixed industrial and residential area. The Trans Technology property location is shown on the attached site map. The activities conducted at the site contributed primarily trichloroethene and heavy metals to the soil and UIC features (i.e., leaching pools and cesspools).

## DESCRIPTION OF THE REMEDIATION OF OU-1

The major elements of the selected remedy as outlined in the ROD include:

- Closure of cesspools and leaching pools (including removal and off-site disposal of sediments exceeding the cleanup objectives).
- Excavation and off-site disposal of soils exceeding the cleanup objectives.
- Backfilling of all excavated areas with clean soils.
- Development of a site management plan to address residual contaminated soils, evaluate the potential for vapor intrusion for any future development on the site, and identify any use restrictions.
- Imposition of an institutional control in the form of an environmental easement that will require compliance with the approved site management plan and require the property owner to complete and submit to the NYSDEC a periodic certification.

## UPCOMING SCHEDULE

The remediation program at the site is scheduled to start in May 2008. The first portion of the work will be the cleaning and closure of the cesspools and leaching pools. This work will involve removal of accumulated sediment from within the structures and in some cases the underlying soil. The removed materials will be containerized and trucked from the site to a permitted disposal facility. The structures will then be tested to verify cleanup objectives have been met prior to backfilling and closure. This portion of the remediation work is scheduled to be completed by August 2008.

The site-wide soil excavation program is currently scheduled for the latter half of 2008.
