1.0 INTRODUCTION

This report presents the results of the Post Closure Groundwater Monitoring Program conducted during the first quarter 2004 for the Sonia Road Landfill. The sampling program was conducted for the Town of Islip and administered by the Islip Resource Recovery Agency (IRRA) in conformance with the Sampling and Analysis Plan (SAP) prepared by Dvirka and Bartilucci Consulting Engineers (D&B), dated December 2001. The Sampling and Analysis Plan is part of the Sonia Road Post Closure Monitoring and Maintenance Plan (Volume 3 of 4).

1.1 Purpose

The purpose of the Post Closure Groundwater Monitoring Program is to monitor groundwater quality and flow direction following capping and closure of the Sonia Road Landfill.

This Post Closure Groundwater Monitoring Program Report includes discussions of the sample locations, sampling procedures, laboratory analyses, field and analytical results, data validation, groundwater level measurements and flow direction. In addition, this report includes a comparison of the analytical results of this sampling event (February 2004) to applicable New York State groundwater quality standards and guidance values, and groundwater sample results obtained during the previous sampling event (fourth quarter 2003).

1.2 Site Location and Description

The Sonia Road Landfill is a capped and closed inactive municipal solid waste landfill owned by the Town of Islip. The landfill is located at 1355 Howells Road in the hamlet of Brentwood in the western portion of the Town and is in close proximity to the western town boundary between the Towns of Islip and Babylon. The location of the Sonia Road Landfill is shown on Figure 1-1.

The landfill property is 42.2 acres in area and is approximately rectangular in shape. The landfill is bounded to the north by industrial properties, to the east by residential properties, to the south by Deer Park Street with residential properties beyond, and to the west by Howell's Road, Secatogue Road and Corbin Avenue with industrial properties beyond. In the southwest corner of the site is one residential parcel (Tax Map No. 221-2-1), which is not part of landfill property described above. At the northwest corner of the property is a 0.5-acre parcel owned by the Town of Islip (Tax Map No. 198-5-7.3), which is identified as a paper street. Given that the waste mass extends onto this parcel, it is considered as part of the landfill property, and as a result, the overall landfill property is considered to be 42.7 acres. At and abutting the northeast corner of the landfill property is the western extension of Sonia Road for which the facility is named.

The landfill property itself is zoned Industrial I and Industrial II with a small portion along the southeastern boundary zoned as residential.

To the southwest of the landfill property is the West Brentwood Middle School, which is located on the west side of Howell's Road. Beyond the school property to the south and west is the headwaters of Sampawams Creek. Sampawams Creek is fed by groundwater discharge as well as storm water drainage systems for the surrounding areas. Sampawams Creek runs from north to south and discharges into the Guggenheim Lakes, which are located north of the Southern State Parkway. Sampawams Creek generally describes the western boundary of the Town of Islip and the eastern boundary of the Town of Babylon.

The Sonia Road Landfill has been owned by the Town of Islip since 1965. Prior to 1965, the site was privately owned and used as a source of mined sand and gravel. As a result of this mining operation, virtually all of the site was disturbed, including the removal of vegetation, topsoil and underlying minerals. The mining operation was extensive with the removal of minerals progressing to and below the water table. Removal of minerals below the water table was accomplished through the use of dredging equipment. This activity resulted in the formation of a groundwater lake over a significant portion of the site (40% to 50%). It is reported that dredging may have removed materials to a depth of 50 feet below the water table. Soil borings

constructed as part of the remedial investigation confirmed that waste lies at least 36 feet below the water table.

In 1965, the Town of Islip took title to the Sonia Road property and began a landfilling operation for the disposal of municipal solid waste. Landfilling of the site occurred between 1965 and 1977. The most active period of landfilling occurred between 1965 and 1974. It has been estimated that between 1.5 and 2.0 million cubic yards of waste was disposed of at the site. There are no weigh records to substantiate this estimate.

The landfill reportedly accepted all municipal solid waste delivered to the site. This waste is reported to have included wood, concrete, metal, plastic, glass, household waste in the form of refuse, rubbish, demolition materials and yard wastes (particularly leaves). It is also reported that junk automobiles were routinely disposed at the facility and that underground fires were common.

The Sonia Road Landfill was capped in the Fall of 2000. The landfill capping system covers an area of approximately 40 acres. The capping system includes an active landfill gas management system, an on-site storm water management system and a perimeter road constructed around the entire site, surfaced with recycled concrete aggregate. The storm water management system consists of a series of drainage swales, catch basins, buried storm water piping, dry wells and two recharge basins. Storm water associated with the northeast corner of the property is discharged to a series of dry wells (leaching rings) in the area of Sonia Road. The remainder of the site storm water is directed to Recharge Basins 1 and 2 located on the west side of the property. Recharge Basin 1 is located adjacent to the main entrance gate located on Corbin Avenue and Recharge Basin 2 is located in the southwest corner of the property. For the majority of the site, drainage swales are located on the in-board side of the perimeter road.

Section 2

2.0 MONITORING WELL NETWORK AND GROUNDWATER SAMPLE LOCATIONS

The monitoring well network for the Sonia Road Landfill consists of 36 wells. Well locations are shown on Figure 2-1. The monitoring wells were constructed in 12 well clusters, with each cluster comprising a shallow (S) well, intermediate (I) well and deep (D) well. All 36 wells were utilized for water level measurements. Well construction information for all wells is summarized in Table 2-1.

Twenty-three (23) wells are included as part of the Post Closure Monitoring Program. The sampled wells are listed in Table 2-2.

Twenty-two (22) of the 23 monitoring wells were sampled as part of the first quarter 2004 Post Closure Groundwater Sampling event. Monitoring well MW-02S could not be sampled due to a well casing obstruction at approximately 23 feet below ground surface.

Section 3

3.0 SAMPLING AND ANALYTICAL PROCEDURES

Sampling procedures for the Sonia Road Landfill site are described in the Sampling and Analysis Plan (SAP). Dedicated and disposable sampling equipment was used whenever possible in accordance with the SAP. All nondisposable equipment was decontaminated before first use on-site and between uses in accordance with the procedures described in the SAP. The following sections provide brief discussions of the procedures used during groundwater level measurements, organic vapor and combustible gas monitoring, landfill gas condensate sampling, groundwater sampling and sample analysis.

3.1 Groundwater Level Measurement

Prior to collecting the groundwater samples, synoptic water level measurements were obtained from all 36 monitoring wells for determination of groundwater elevations and groundwater flow direction. Groundwater level measurements were obtained from a survey measuring point on each well using an electronic water level indicator to an accuracy of 0.01 foot. A discussion of the groundwater level measurement results and groundwater flow direction is provided in Section 6.0.

3.2 Groundwater Sampling

Prior to collection of each groundwater sample, a minimum of 3 to 5 well volumes was purged from the well. Well purging was accomplished by first measuring the static water level in the well and calculating the standing water volume. A decontaminated submersible pump was used to purge each well.

During the purging process, field parameters (pH, specific conductance, temperature, Eh, dissolved oxygen and turbidity) were monitored and recorded. When the values of the field parameters, except turbidity, equilibrated within 10% based on the last two readings, the turbidity of the groundwater was less than 50 Nephelometric Turbidity Units (NTUs) and at least three well volumes had been removed, well purging was considered complete.

Groundwater samples were collected using new, dedicated, disposable polyethylene bailers and polypropylene rope. Samples were collected immediately after purging. Filled sample bottles were stored in ice-filled coolers with the chain-of-custody forms and delivered on the day of collection to H2M Laboratories, Inc. for analysis. H2M Laboratories, Inc. is approved by the New York State Department of Health under the Environmental Laboratory Approval Program (ELAP) for the analyses performed.

Appropriate quality assurance/quality control (QA/QC) samples, which included field blanks, matrix spike and matrix spike duplicate (MS/MSD) sets and blind duplicates, were collected in accordance with the SAP.

Purge water from all on-site wells and all wells immediately adjacent to the landfill property was disposed directly into the nearest landfill capping system drainage swale. Purge water generated from off-site well clusters 11 and 12 was pumped into a 3,000-gallon tank truck, transported to the landfill and discharged into the landfill's on-site Recharge Basin 1 in accordance with the SAP.

Analytical results are summarized in Appendix A and are discussed in Section 4.2. Field forms for the first quarter 2004 sampling event, including field observation logs and daily equipment calibration logs, are contained in Appendices B-1 and B-2, respectively, and the chain-of-custody forms are provided in Appendix C.

3.3 Landfill Gas Condensate Sampling

Landfill gas (LFG) condensate grab sample was collected at the tank withdrawal sampling port 001A, which is located on the south end of the below-grade LFG condensate storage tank located within the facility's LFG Management Compound. The grab sample was obtained through the use of a dedicated and disposable bailer. The Landfill Gas Condensate Sampling Report presents the analytical data from the LFG condensate sample and is provided in Appendix E.

3.4 Organic Vapor and Combustible Gas Monitoring

Total organic vapor and combustible gas measurements were collected in all 36 monitoring wells. Organic vapors were measured using a flame ionization detector (FID). Combustible gas was measured using a portable multi-gas meter. Gas monitoring results represent headspace measurements collected during the synoptic groundwater level measurements. The results of the organic vapor and combustible gas monitoring are provided in Section 4.3.

3.5 Analytical Parameters

Groundwater samples and the landfill gas (LFG) condensate sample collected during the first quarter 2004 sampling event were analyzed for 6 NYCRR Part 360 Routine Parameters, including leachate indicator and inorganic parameters. The leachate indicators include alkalinity, ammonia, biochemical oxygen demand, bromide, chemical oxygen demand, chloride, total hardness (as $CaCO_3$), nitrate, total phenols, sulfate, total organic carbon, total dissolved solids, total Kjeldahl nitrogen. Samples were analyzed in accordance with SW-846 methods as specified in the NYCRR Part 360 regulations. The analytical results for the groundwater samples are discussed in Section 4.2 and the analytical results for the LFG condensate sample are presented in Appendix E.

Section 4

4.0 ANALYTICAL RESULTS

4.1 Field Parameters

Table 4-1 provides a summary of the final field parameter values and field data measured for the first quarter 2004 sampling event.

4.2 Groundwater Samples

The first quarter 2004 analytical results for the groundwater samples, compared to NYSDEC Class GA groundwater standards and guidance values and to previous sample results, are provided in Appendices A-1 (leachate indicator parameters), A-2 (inorganic parameters). Appendix A-3 contains historic volatile organic compound (VOC) sample results. Appendix A-4 contains historic trend graphs for alkalinity, iron plus manganese, total dissolved solids and specific conductivity from selected upgradient and downgradient monitoring wells.

4.2.1 Leachate Indicators

The results of the leachate indicators for the groundwater samples are presented in Appendix A-1. As shown in the results table in Appendix A-1, 10 of the 22 wells sampled exhibited one or more leachate indicators exceeding the Class GA groundwater standards and guidance values, including ammonia, bromide and chloride. The leachate indicators that exceeded the Class GA standards/guidance values are discussed below.

Ammonia

The groundwater standard for ammonia (2 milligrams per liter [mg/l]) was exceeded in wells MW-04I and MW-06S. Ammonia concentrations in these wells ranged from 3.28 mg/l in well MW-06S to 4.77 mg/l well MW-04I.

Notes:

ppm:	parts per million	°C:	Degrees Celsius
FID:	Flame Ionization Detector	mS/cm:	Millisiemens per centimeter
LEL:	Lower Explosive Limit	NTU:	Nephelometric Turbidity Unit
mV:	Millivolt	DO:	Dissolved oxygen
Eh:	Redox potential	mg/l	Milligrams per liter
		NS:	Not sampled

Final field parameter readings were measured upon completion of sample collection.

Bromide

The guidance value for bromide (2 mg/l) was exceeded in nine (9) wells (MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-05D, MW-06S and MW-06D). Bromide concentrations in these wells ranged from 2.1 mg/l in well MW-06S to 6.0 mg/l in well MW-05D.

Chloride

The groundwater standard for chloride (250 mg/l) was exceeded in well MW-01D, which contained a concentration of 656 mg/l.

4.2.2 Historic Leachate Indicators

A comparison of the first quarter 2004 results to fourth quarter 2003 results for each leachate indicator parameter in the 22 wells sampled is provided below. Since well MW-02S was not sampled during the first quarter (February 2004), it is not included in the comparison. Concentration trends and exceedances for each well are summarized in Table 4-2. Historic data for leachate indicator parameters are summarized in Appendix A-1.

Alkalinity

Three (3) of the 22 wells sampled showed an increase (defined as a change of at least 20% compared to the previous result) in alkalinity concentrations. The wells that showed an increase are MW-02I, MW-05D and MW-11I. Seven (7) wells (MW-01I, MW-05S, MW-05I, MW-06D, MW-11S, MW-11D and MW-12S) showed a decrease (defined as a change of at least 20% compared to the previous result) in alkalinity concentrations. The remaining 12 wells were consistent (within 20% of previous result).

Ammonia

Eight (8) wells (MW-01I, MW-01D, MW-05D, MW-07I, MW-11S, MW-11I, MW-11D and MW-12I) showed increasing concentrations of ammonia. Seven (7) wells (MW-01S, MW-03S, MW-04S, MW-04D, MW-05S, MW-05I and MW-06S) showed decreasing concentrations in ammonia. The remaining 7 wells were consistent.

Biochemical Oxygen Demand

Four (4) wells (MW-02D, MW-04D, MW-05I and MW-07I) showed increasing concentrations of biochemical oxygen demand. Six (6) wells (MW-03S, MW-04S, MW-04I, MW-05S, MW-06S and MW-06D) showed decreasing concentrations. The remaining 12 wells were consistent.

Bromide

Ten (10) wells (MW-02I, MW-02D, MW-03S, MW-04S, MW-04I, MW-05S, MW-05I, MW-05D, MW-11S and MW-11I) showed increasing bromide concentrations. Seven (7) wells (MW-01S, MW-01I, MW-01D, MW-06S, MW-06I, MW-06D and MW-07I) showed decreasing concentrations. The remaining 5 wells were consistent.

Chemical Oxygen Demand

Ten (10) wells (MW-01D, MW-02I, MW-03S, MW-04S, MW-04D, MW-05S, MW-06S, MW-11I, MW-12S and MW-12I) showed increasing concentrations of chemical oxygen demand. Four (4) wells (MW-04I, MW-05D, MW-06D and MW-11S) showed decreasing concentrations. The remaining 8 wells were consistent.

Chloride

Ten (10) wells (MW-01D, MW-02I, MW-02D, MW-04D, MW-05D, MW-06D, MW-07I, MW-11I, MW-11D and MW-12S) showed increasing chloride concentrations. Three (3) wells (MW-01S, MW-03S and MW-05S) showed decreasing concentrations. The remaining 9 wells were consistent.

Hardness

Four (4) wells (MW-01D, MW-05I, MW-06I and MW-11I) showed increasing hardness concentrations. Thirteen (13) wells (MW-01S, MW-01I, MW-03S, MW-04I, MW-04D, MW-05S, MW-05D, MW-06S, MW-06D, MW-11S, MW-11D, MW-12S and MW-12D) showed decreasing concentrations. The remaining 5 wells were consistent.

Nitrate

Six (6) wells (MW-03S, MW-04S, MW-05S, MW-05I, MW-06S and MW-12D) showed increasing nitrate concentrations. Nine (9) wells (MW-01S, MW-01I, MW-01D, MW-05D, MW-06D, MW-07I, MW-11I, MW-12S and MW-12I) showed decreasing concentrations. The remaining 7 wells were consistent.

Total Phenols

All sampled wells were consistent.

Sulfate

Wells MW-03S and MW-05S showed increasing sulfate concentrations. Thirteen (13) wells (MW-01S, MW-01D, MW-04S, MW-04D, MW-05I, MW-06S, MW-06D, MW-11S, MW-11I, MW-11D, MW-12S, MW-12I and MW-12D) showed decreasing concentrations. The remaining 7 wells were consistent.

Total Organic Carbon

Wells MW-04D and MW-06S showed increasing concentrations of total organic carbon. Wells MW-05S and MW-06D showed decreasing concentrations. The remaining 18 wells were consistent.

Total Dissolved Solids

Eight (8) wells (MW-01I, MW-01D, MW-02D, MW-05D, MW-06D, MW-07I, MW-11I and MW-11D) showed increasing concentrations of total dissolved solids. Six (6) wells (MW-01S, MW-04S, MW-04D, MW-06I, MW-12I and MW-12D) showed decreasing concentrations. The remaining 8 wells were consistent.

Total Kjeldahl Nitrogen

Five (5) wells (MW-01D, MW-05D, MW-07I, MW-11I and MW-12I) showed increasing concentrations of total kjeldahl nitrogen. Nine (9) wells (MW-01S, MW-01I, MW-02I, MW-03S, MW-04S, MW-05S, MW-05I, MW-06D and MW-12S) showed decreasing concentrations. The remaining 8 wells were consistent.

4.2.3 Inorganic Parameters

The results of the inorganic parameters for the groundwater samples are presented in Appendix A-2. As shown by the first quarter 2004 analytical results, iron, manganese and sodium were detected at concentrations above groundwater standards. The following provides a discussion of these exceedances.

Iron

Thirteen (13) wells (MW-01S, MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-05D, MW-06S, MW-06I, MW-06D, MW-11S and MW-12S) exceeded the groundwater standard of 300 micrograms per liter (ug/l) for iron. Iron concentrations for those wells with exceedances ranged from 324 ug/l in well MW-12S to 62,600 ug/l in well MW-04S.

Manganese

Fourteen (14) wells (MW-01S, MW-02I, MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-05D, MW-06S, MW-06I, MW-06D, MW-07I and MW-11I) exceeded the groundwater standard of 300 micrograms per liter (ug/l) for manganese. Manganese concentrations for those wells with exceedances ranged from 360 ug/l in well MW-02I to 10,000 ug/l in well MW-06D.

Sodium

Ten (10) wells (MW-01S, MW-01I, MW-01D, MW-03S, MW-04S, MW-04I, MW-05I, MW-05D, MW-11S and MW-12S) exceeded the groundwater standard of 20,000 ug/l for sodium. Sodium concentrations for those wells with exceedances ranged from 21,100 ug/l in well MW-05D to 416,000 ug/l in MW-01D.

4.2.4 Historic Inorganic Parameters

A comparison of the first quarter 2004 results to the fourth quarter 2003 results for each inorganic parameter in the 22 wells sampled is provided below. Well MW-02S was not sampled during the first quarter (February 2004) and, therefore, not included in the comparison. Concentration trends and exceedances for each well are summarized in Table 4-3. Historic data for inorganic parameters are summarized in Appendix A-2.

Table 4-3

Key: I = Increasing greater than 20%
D = Decreasing greater than 20%
C = Consistent within 20%`
= Parameter exceeds standard/guidance value

Cadmium

Wells MW-02I and MW-12D showed increasing cadmium concentrations. Seventeen (17) wells (MW-01S, MW-01I, MW-01D, MW-02D, MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-06S, MW-06I, MW-06D, MW-11S, MW-11D, MW-12S and MW-12I) showed decreasing concentrations. The remaining 3 wells were consistent.

Calcium

Six (6) wells (MW-01D, MW-04D, MW-05D, MW-07I, MW-11S and MW-11I) showed increasing calcium concentrations. Three (3) wells (MW-01S, MW-01I and MW-05S) showed decreasing concentrations. The remaining 13 wells were consistent.

Iron

Eight (8) wells (MW-04S, MW-04D, MW-05D, MW-06S, MW-11S, MW-12S, MW-12I and MW-12D) showed increasing iron concentrations. Eight (8) wells (MW-01I, MW-01D, MW-02I, MW-02D, MW-05I, MW-07I, MW-11I and MW-11D) showed decreasing concentrations. The remaining 6 wells were consistent.

Lead

Ten (10) wells (MW-01S, MW-02D, MW-04I, MW-04D, MW-06S, MW-06I, MW-07I, MW-11S, MW-11D and MW-12D) showed increasing lead concentrations. Eight (8) wells (MW-01I, MW-01D, MW-03S, MW-04S, MW-05S, MW-05I, MW-05D and MW-06D) showed decreasing concentrations. The remaining 4 wells were consistent.

Magnesium

Seven (7) wells (MW-01D, MW-04D, MW-05D, MW-06S, MW-07I, MW-11S and MW-11I) showed increasing magnesium concentrations. Three (3) wells (MW-01I, MW-04S, and MW-05S) showed decreasing concentrations. The remaining 12 wells were consistent.

Manganese

Nine (9) wells (MW-01S, MW-01D, MW-04D, MW-06S, MW-07I, MW-11I, MW-11D, MW-12S and MW-12D) showed increasing manganese concentrations. Four (4) wells (MW-02D, MW-04S, MW-05S and MW-05I) showed decreasing concentrations. The remaining 9 wells were consistent.

Potassium

Five (5) wells (MW-01I, MW-01D, MW-05D, MW-06S and MW-07I) showed increasing potassium concentrations. Four (4) wells (MW-01S, MW-06I, MW-06D and MW-12S) showed decreasing concentrations. The remaining 13 wells were consistent.

Sodium

Six (6) wells (MW-01I, MW-01D, MW-05D, MW-07I, MW-11D and MW-12S) showed increasing sodium concentrations. Three (3) wells (MW-01S, MW-05S and MW-11S) showed decreasing concentrations. The remaining 13 wells were consistent.

In order to evaluate changes in groundwater, historic results for alkalinity, iron plus manganese, total dissolved solids and specific conductivity were graphed for the shallow, intermediate and deep zones for upgradient well clusters 1 and 11, and downgradient well clusters 4 and 5. These parameters were selected as possible indicators of landfill impacts to groundwater. These graphs are included in Appendix A-4.

4.3 Landfill Gas Condensate Sample

The first quarter 2004 analytical results for the landfill gas condensate sample are presented within the Landfill Gas Condensate Sampling Report presented in Appendix E.

4.4 Organic vapor and Combustible Gas Monitoring

The results of the organic vapor and combustible gas monitoring are presented in Table 4-1. The results measured by the flame ionization detector (FID) show nondetectable readings in all wells except for wells MW-02S and MW-02I. The FID results for these wells were both 1 part per million (ppm). All 36 wells showed a combustible gas reading of 0% of the lower explosive limit (LEL). The LEL for methane is 5% by volume or 50,000 ppm.

Section 5

5.0 DATA VALIDATION

Twenty-two (22) groundwater samples and one landfill gas condensate sample were collected in February 2004, as part of the Post Closure Groundwater Monitoring Program sampling event at the Sonia Road Landfill. The samples were analyzed for Routine Parameters as listed in 6 NYCRR Part 360. Sample analysis was performed by H2M Laboratories, a contractor to the IRRA, in accordance with SW-846 methods as specified in the Part 360 regulations. H2M Laboratories is approved under the New York State Department of Health Environmental Laboratory Approval Program (ELAP) for the analyses performed.

The data package submitted by H2M Laboratories was reviewed for completeness and compliance with the analytical methods. All of the quality assurance/quality control (QA/QC) samples (calibrations, spikes, duplicates and blanks), as well as 20% of the analytical results, were reviewed yielding a "20% validation" in conformance with the Sampling and Analysis Plan. The samples that were reviewed for calculation and transcription errors were MW-02D, MW-04I, MW-05I, MW-07I and MW-12I. The findings of the review process are summarized below.

All samples were analyzed within the method specified holding times. All QA/AC requirements (calibrations, spikes, duplicates and blanks) were met.

Blind duplicates were collected from MW-12I (Blind Duplicate 1) and MW-05I (Blind Duplicate 2), and the results were comparable between the samples. Two samples (MW-05D and MW-12D) were collected and specified as the matrix spike and matrix spike duplicate. All spike recoveries were within QC limits.

No problems were found with the data package. All results are deemed valid and usable for environmental assessment purposes.

Completed data validation forms for the first quarter 2004 sampling event are provided in Appendix D.

Section 6

6.0 GROUNDWATER LEVEL MEASUREMENTS AND FLOW DIRECTION

Groundwater level measurements were obtained on February 26, 2004, from each of the 23 monitoring wells included in the Post Closure Groundwater Monitoring Program and the 13 additional wells not sampled as part of this program. The depth to water measurements, measuring point elevations and calculated groundwater elevations for the 36 monitoring wells are presented in Table 6-1.

Water level data from February 26, 2004 were used to construct groundwater elevation contour maps for the shallow (water table), intermediate and deep upper glacial aquifer wells at and in the immediate vicinity of the Sonia Road Landfill. Water table and potentiometric surface (for the intermediate and deep wells) elevation contour maps are presented on Figures 6-1, 6-2 and 6-3, respectively. Groundwater flow within the zones screened by the shallow, intermediate and deep wells is predominantly toward the southeast in the vicinity of the landfill. These maps are consistent with the maps previously prepared for the site.

7.0 CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

Groundwater Flow

Based on groundwater level measurements collected during the first quarter 2004 and the shallow (water table), intermediate and deep potentiometric surface elevation contour maps constructed for the site, groundwater flow at and in the vicinity of the Sonia Road Landfill is predominantly toward the southeast. This groundwater flow direction is consistent with previous maps prepared for the site.

Groundwater Quality

Based on a comparison of the first quarter 2004 results to the fourth quarter 2003 results and review of the historical trend graphs in Appendix A-4, groundwater quality in the vicinity of the Sonia Road Landfill has not changed substantially.

The detected concentrations of iron, manganese and sodium are likely not indicative of landfill-influenced groundwater, since concentrations of these parameters above groundwater standards were detected in both upgradient and downgradient wells.

Concentrations of bromide up to 6 mg/l (above the guidance value of 2 mg/l) were detected in several downgradient wells during this sampling event. Historic results show sporadic bromide detections above the guidance value in upgradient and downgradient wells for the third quarter 2002 and fourth quarter 2003 sampling events (see Appendix A-1). As a result, it appears unlikely that the detected bromide is related to the landfill. The bromide concentrations from future sampling events will be monitored to evaluate this conclusion.

7.2 Recommendations

Based on the first quarter 2004 results and comparison of these results to historic data for the Sonia Road Landfill, it is recommended to continue to sample the groundwater monitoring wells in accordance with the SAP.

Due to the damaged well casing identified for well MW-02S, it is recommended that well MW-02S be abandoned and replaced with a new monitoring well. Since the landfill cap in this area extends to the northern property boundary, it is likely that the replacement well would need to be located on an adjacent property.

NOTES:

NS: Not sampled

: Concentration exceeds Standard/Guidance Value

U: Analyzed for but not detected, value shown is instrument detection limit

NA: Not analyzed

B : Compound detected above instrument detection limit but below contract required detection limit

ST*: Standard for the sum of iron and manganese is 500 ug/l

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

FIELD FORMS – FIELD OBSERVATION LOGS

FIELD OBSERVATION LOG
GROUNDWATER SAMPLING RECORD

SITE Sonia Road Landfill DATE 2/26/04

SAMPLE ID: 2023-MW-01S (29)
WELL ID: MW-01S

SAMPLERS:		Time On-site:	Time Off-site:
	Supy Singh	1200	1310
	James Milligan	1200	1310

Depth of well (from top of casing) ..... 28.88 ft Time: _____
Initial static water level (from top of casing) ..... 15.51 ft Time: _____

Purging Method

Airlift	____	Centrifugal	____
Bailer	____	Pos. Displ.	____
Submersible	X	Ded. Pump	____

Well Volume Calculation:
2 in. casing: _____ ft. of water x 0.16 = _____ gallons
3 in. casing: _____ ft. of water x 0.36 = _____ gallons
4 in. casing: 13.37 ft. of water x 0.65 = 8.69 gallons

volume of water removed:
30 gal. >3 volumes: yes X no ____ purged dry? yes ____ no X

Field Tests

Volume of Purge Water (in gallons)	pH	Temp (c°)	Spec. Cond. (ms/cm)	Turbidity (NTUs)	Dissolved Oxygen (mg/l)	Eh (mv)
Initial	5.43	12.47	0.665	358.0	4.86	246

Sampling

Time of Sample Collection: 1015

Method:
____ Stainless steel bailer
____ Teflon bailer
____ Pos. Disp. Pump
X Disposable bailer
____ Dedicated pump
____ Other: ____

Analyses:
____ VOCs 602 ____ 503 ____ Other ____
____ SVOCs
X Metals
____ PCB/Pest.
____ Physical
X Other BOD5, BR, Ch, so4, total alkalinity, TDS, COD, NH3, NO3, phenols, TKN, TOC, total hardness

Observations

Weather/Temperature: overcast 50 degrees F
Sample description: clear colorless no odor
Free Product? yes ____ no X describe ____
Sheen? yes ____ no X describe ____
Odor? yes ____ no X describe ____

Sample	4.17	14.00	0.133	4.7	4.57	378

Sampling

Time of Sample Collection: 1210

Method:
- ____ Stainless steel bailer
- ____ Teflon bailer
- ____ Pos. Disp. Pump
- X Disposable bailer
- ____ Dedicated pump
- ____ Other: ____

Analyses:
- ____ VOCs 602 ____ 503 ____ Other ____
- ____ SVOCs
- X Metals
- ____ PCB/Pest.
- ____ Physical
- X Other BOD5, BR, Ch, so4, total alkalinity, TDS, COD, NH3, NO3, phenols, TKN, TOC, total hardness

Observations

Weather/Temperature: sunny clear. 60 degrees F
Sample description: clear colorless no odor
Free Product? yes ____ no X describe ____
Sheen? yes ____ no X describe ____
Odor? yes ____ no X describe ____

Comments:

I. Data Deliverable Requirements

A. Legible	Yes
B. Paginated	Yes
C. Arranged in order	Yes
D. Consistent dates	Yes
E. Case Narrative	Yes
F. Chain-of-Custody Record	Yes
G. Sample Data Complete	Yes
H. Standard Date Complete	Yes
I. Raw QC Data Complete	Yes

Comments: IRS027 & IRS028

22 wells,1 landfill gas condensate, 2 MS/MSD,2 field blanks and 2 blind duplicates were collected and analyzed for routine parameters

Nitrate for sample MW-03S was analyzed at a dilution but not re-analyzed more concentrated, therefore the detection limit was elevated.

Several QC parameters were not met in the initial analysis, samples were reanalyzed with compliant QC and the data from the reruns was used for reporting purposes.

Blind Dup #1 was a duplicate of MW-12I and Blind Dup #2 was a duplicate of MW-5I, both sets of data were comparable, no qualification of the data was required.

All data was deemed valid and usable

MS/MSD's were collected at MW-05D and MW-12D, no problems found

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella Date of Review: 4/23/04

IV. Blank Summary

A. Method Blanks

1. Was a method blank prepared and analyzed at the contract specified frequency?

   Yes

2. Were all the analytes below the CRDL in the method blank?

   Yes

Comments:

B. Calibration Blanks

1. Were all initial and continuing calibration blanks analyzed at the contract specified frequency/

   Yes

2. Were all the analytes below the CRDL in all the calibration blanks?

   Yes

Comments:

DATA VALIDATION – METALS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella Date of Review: 4/23/04

MW-12D, MW-5D

V. Duplicate Analysis

1. Was a duplicate prepared and analyzed at the contract specified frequency?

   Yes

   Comments:

2. Were control limits for the relative percent differences (RPD) met for each analyte?

   Yes

   Comments:

No problems found

For sample values >5 times the CRDL, the RPD control limit is ±20%.

For sample values >5 times the CRDL, the RPD control limit is ±CRDL.

If sample results were outside of the control limits, all data associated with that duplicate sample should have been flagged with a "*".

DATA VALIDATION – METALS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

MW-12D, MW-5D

VI. Matrix Spike Analysis

1. Was a matrix spike prepared and analyzed at the contract specified frequency?

   Yes

   Comments:

2. Were the matrix spike recoveries within the contract specified control limits (75-125%)?

   Yes

   If "No", note analytes _____

   Data should have been flagged with "N" for analytes out of control limits. If the sample concentration exceeds the spike concentration by a factor of four or more, no flag is required.

VII. ICP Interference Check Sample Summary (continued):

4. Was the ICP interference check sample analyzed at the contract specified frequency:

   Yes

   Comments:

5. Were the ICP interference check sample results within the control limit of ±w-20% of the mean value?

   Yes

   If "No", not analytes

DATA VALIDATION – METALS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella Date of Review: 4/23/04

VIII. Laboratory Control Sample Analysis

1. Was a laboratory control sample analyzed at the contract required frequency?

   Yes

   Comments:

2. Were the percent recoveries within the control limits of 80-120% (except for Ag and Sb) for each analyte?

   Yes

   Comments:

Re: Analytical Data- Landfill Gas Condensate Sample Results
Sonia Road Landfill
SCDPW Discharge Certification No. 099-001-0057
D&B No. 2023

Dear Mr. DiMaria:

The purpose of this report is to provide landfill gas (LFG) condensate sampling analytical data for the Sonia Road Landfill as required by the Suffolk County Department of Public Works (SCDPW) Discharge Certification (D.C. No. 099-001-0057), dated December 1, 2003. The Discharge Certification is a requirement for LFG condensate disposal at SCDPW facilities.

One LFG condensate sample was collected on February 26, 2004, as part of the first quarter 2004 sampling event at the landfill. In accordance with SCDPW requirements, a grab sample was collected from the LFG condensate collection tank. The sample was collected using a dedicated disposable polyethylene bailer. The sampling point designation is shown in Table 1.

The analytical results for the LFG condensate sample are summarized in Table 2 (leachate indicator parameters) and Table 3 (inorganic parameters). The laboratory data sheets for this sample are enclosed.

If you have any questions or require any additional information, please call me at (516) 364-9890.

Very truly yours,

Keith S. Robins for,

Kenneth P. Wenz, Jr., C.P.G.
