Post Closure Groundwater Monitoring Program
3rd Quarter 2004 Sampling Results

Dear Mr. Trad:

Transmitted herewith for your review and consideration is one copy of the following Post Closure Groundwater Monitoring Program Quarterly Sampling Results for the Sonia Road Landfill:

1. 3rd Quarter 2004 (Routine Sampling Event)

As always, please do not hesitate to contact my office with any questions regarding the aforementioned.

Sincerely,

Francis D. Ribaudo, P.E.
Associate Engineer

1.0 INTRODUCTION

This report presents the results of the Post Closure Groundwater Monitoring Program conducted during the third quarter 2004 for the Sonia Road Landfill. The sampling program was conducted for the Town of Islip and administered by the Islip Resource Recovery Agency (IRRA) in conformance with the Sampling and Analysis Plan (SAP) prepared by Dvirka and Bartilucci Consulting Engineers (D&B), dated December 2001. The Sampling and Analysis Plan is part of the Sonia Road Post Closure Monitoring and Maintenance Plan (Volume 3 of 4).

1.1 Purpose

The purpose of the Post Closure Groundwater Monitoring Program is to monitor groundwater quality and flow direction following capping and closure of the Sonia Road Landfill.

This Post Closure Groundwater Monitoring Program Report includes discussions of the sample locations, sampling procedures, laboratory analyses, field and analytical results, data validation, groundwater level measurements and flow direction. In addition, this report includes a comparison of the analytical results of this sampling event (August 2004) to applicable New York State groundwater quality standards and guidance values, and groundwater sample results obtained during the previous sampling event (second quarter 2004).

1.2 Site Location and Description

The Sonia Road Landfill is a capped and closed inactive municipal solid waste landfill owned by the Town of Islip. The landfill is located at 1355 Howells Road in the hamlet of Brentwood in the western portion of the Town and is in close proximity to the western town boundary between the Towns of Islip and Babylon. The location of the Sonia Road Landfill is shown on Figure 1-1.

FIGURE No.1-1

\\Nt4\CADwork\2023\2023-1A.dwg, 10/06/04 09:17:06 AM, JMilligan

The landfill property is 42.2 acres in area and is approximately rectangular in shape. The landfill is bounded to the north by industrial properties, to the east by residential properties, to the south by Deer Park Street with residential properties beyond, and to the west by Howell's Road, Secatogue Road and Corbin Avenue with industrial properties beyond. In the southwest corner of the site is one residential parcel (Tax Map No. 221-2-1), which is not part of landfill property described above. At the northwest corner of the property is a 0.5-acre parcel owned by the Town of Islip (Tax Map No. 198-5-7.3), which is identified as a paper street. Given that the waste mass extends onto this parcel, it is considered as part of the landfill property, and as a result, the overall landfill property is considered to be 42.7 acres. At and abutting the northeast corner of the landfill property is the western extension of Sonia Road for which the facility is named.

The landfill property itself is zoned Industrial I and Industrial II with a small portion along the southeastern boundary zoned as residential.

To the southwest of the landfill property is the West Brentwood Middle School, which is located on the west side of Howell's Road. Beyond the school property to the south and west is the headwaters of Sampawams Creek. Sampawams Creek is fed by groundwater discharge as well as storm water drainage systems for the surrounding areas. Sampawams Creek runs from north to south and discharges into the Guggenheim Lakes, which are located north of the Southern State Parkway. Sampawams Creek generally describes the western boundary of the Town of Islip and the eastern boundary of the Town of Babylon.

The Sonia Road Landfill has been owned by the Town of Islip since 1965. Prior to 1965, the site was privately owned and used as a source of mined sand and gravel. As a result of this mining operation, virtually all of the site was disturbed, including the removal of vegetation, topsoil and underlying minerals. The mining operation was extensive with the removal of minerals progressing to and below the water table. Removal of minerals below the water table was accomplished through the use of dredging equipment. This activity resulted in the formation of a groundwater lake over a significant portion (40% to 50%) of the site. It is reported that dredging may have removed materials to a depth of 50 feet below the water table. Soil borings

constructed as part of the remedial investigation confirmed that waste lies at least 36 feet below the water table.

In 1965, the Town of Islip took title to the Sonia Road property and began a landfilling operation for the disposal of municipal solid waste. Landfilling of the site occurred between 1965 and 1977. The most active period of landfilling occurred between 1965 and 1974. It has been estimated that between 1.5 and 2.0 million cubic yards of waste was disposed of at the site. There are no weigh records to substantiate this estimate.

The landfill reportedly accepted all municipal solid waste delivered to the site. This waste is reported to have included wood, concrete, metal, plastic, glass, household waste in the form of refuse, rubbish, demolition materials and yard wastes (particularly leaves). It is also reported that junk automobiles were routinely disposed at the facility and that underground fires were common.

The Sonia Road Landfill was capped in the Fall of 2000. The landfill capping system covers an area of approximately 40 acres. The capping system includes an active landfill gas management system, an on-site storm water management system and a perimeter road constructed around the entire site, surfaced with recycled concrete aggregate. The storm water management system consists of a series of drainage swales, catch basins, buried storm water piping, dry wells and two recharge basins. Storm water associated with the northeast corner of the property is discharged to a series of dry wells (leaching rings) in the area of Sonia Road. The remainder of the site storm water is directed to Recharge Basins 1 and 2 located on the west side of the property. Recharge Basin 1 is located adjacent to the main entrance gate located on Corbin Avenue and Recharge Basin 2 is located in the southwest corner of the property. For the majority of the site, drainage swales are located on the in-board side of the perimeter road.

Section 2

2.0 MONITORING WELL NETWORK AND GROUNDWATER SAMPLE LOCATIONS

The monitoring well network for the Sonia Road Landfill consists of 36 wells. Well locations are shown on Figure 2-1. The monitoring wells were constructed in 12 well clusters, with each cluster comprising a shallow (S) well, intermediate (I) well and deep (D) well. All 36 wells are utilized for water level measurements. Well construction information for all wells is summarized in Table 2-1.

Twenty-three (23) wells are included as part of the Post Closure Monitoring Program. The sampled wells are listed in Table 2-2.

Twenty-two (22) of the 23 monitoring wells were sampled as part of the third quarter 2004 Post Closure Groundwater Sampling event. Monitoring well MW-02S could not be sampled due to a well casing obstruction at approximately 23 feet below ground surface.

Section 3

3.0 SAMPLING AND ANALYTICAL PROCEDURES

Sampling procedures for the Sonia Road Landfill site are described in the Sampling and Analysis Plan (SAP). Dedicated and disposable sampling equipment was used whenever possible in accordance with the SAP. All nondisposable equipment was decontaminated before first use on-site and between uses in accordance with the procedures described in the SAP. The following sections provide brief discussions of the procedures used during groundwater level measurements, organic vapor and combustible gas monitoring, groundwater sampling and sample analysis.

3.1 Groundwater Level Measurement

Prior to collecting the groundwater samples, synoptic water level measurements were obtained from all 36 monitoring wells for determination of groundwater elevations and groundwater flow direction. Groundwater level measurements were obtained from a survey measuring point on each well using an electronic water level indicator to an accuracy of 0.01 foot. A discussion of the groundwater level measurement results and groundwater flow direction is provided in Section 6.0.

3.2 Groundwater Sampling

Prior to collection of each groundwater sample, 3 to 5 well volumes were purged from the well. Well purging was accomplished by first measuring the static water level in the well and calculating the standing water volume. A decontaminated submersible pump was used to purge each well.

During the purging process, field parameters (pH, specific conductance, temperature, oxidation-reduction potential (Eh), dissolved oxygen and turbidity) were monitored and recorded. When the values of the field parameters, except turbidity, equilibrated within 10% based on the last two readings, the turbidity of the groundwater was less than 50 Nephelometric

Turbidity Units (NTUs) and at least three well volumes had been removed, well purging was considered complete.

Groundwater samples were collected using new, dedicated, disposable polyethylene bailers and polypropylene rope. Samples were collected immediately after purging. Filled sample bottles were stored in ice-filled coolers with the chain-of-custody forms and delivered on the day of collection to H2M Laboratories, Inc. for analysis. H2M Laboratories, Inc. is approved by the New York State Department of Health under the Environmental Laboratory Approval Program (ELAP) for the analyses performed.

Appropriate quality assurance/quality control (QA/QC) samples, which included field blanks, matrix spike and matrix spike duplicate (MS/MSD) sets and blind duplicates, were collected in accordance with the SAP.

Purge water from all on-site wells and all wells immediately adjacent to the landfill property was disposed directly into the nearest landfill capping system drainage swale. Purge water generated from off-site well clusters 11 and 12 was pumped into a tank truck, transported to the landfill and discharged into the landfill's on-site Recharge Basin 1 in accordance with the SAP.

Analytical results are summarized in Appendix A and are discussed in Section 4.2. Field forms for the third quarter 2004 sampling event, including field observation logs and daily equipment calibration logs, are contained in Appendices B-1 and B-2, respectively, and the chain-of-custody forms are provided in Appendix C.

3.3 Organic Vapor and Combustible Gas Monitoring

Total organic vapor and combustible gas measurements were collected in all 36 monitoring wells. Organic vapors were measured using a flame ionization detector (FID). Combustible gas was measured using a portable multi-gas meter. Gas monitoring results represent headspace measurements collected during the synoptic groundwater level

measurements. The results of the organic vapor and combustible gas monitoring are provided in Section 4.3.

3.4 Analytical Parameters

Groundwater samples collected during the third quarter 2004 sampling event were analyzed for 6 NYCRR Part 360 Routine Parameters, including leachate indicators and inorganic parameters. Samples were analyzed in accordance with SW-846 methods as specified in the NYCRR Part 360 regulations. The analytical results for the groundwater samples are discussed in Section 4.2.

Section 4

4.0 ANALYTICAL RESULTS

4.1 Field Parameters

Table 4-1 provides a summary of the final field parameter values and field data measured for the third quarter 2004 sampling event.

4.2 Groundwater Samples

The third quarter 2004 analytical results for the groundwater samples, compared to NYSDEC Class GA groundwater standards and guidance values and to previous sample results, are provided in Appendices A-1 (leachate indicator parameters) and A-2 (inorganic parameters). Appendix A-3 contains historic volatile organic compound (VOC) sample results. Appendix A-4 contains historic trend graphs for alkalinity, iron plus manganese, total dissolved solids and specific conductivity from selected upgradient and downgradient monitoring wells.

4.2.1 Leachate Indicators

The results of the leachate indicators for the groundwater samples are presented in Appendix A-1. As shown in the results table in Appendix A-1, three leachate indicator parameters, ammonia, bromide and chloride, were detected at concentrations exceeding Class GA groundwater standards and guidance values in 8 of the 22 wells sampled during the third quarter 2004 sampling event. The remaining 14 wells did not contain any leachate indicator parameters at concentrations exceeding Class GA groundwater standards or guidance values. The leachate indicators that exceeded the Class GA groundwater standards or guidance values are discussed below.

Ammonia

The groundwater standard for ammonia (2 milligrams per liter [mg/l]) was exceeded in six (6) wells (MW-03S, MW-04S, MW-04I, MW-04D, MW-05S and MW-06S). Ammonia

mV:	Millivolt	DO:	Dissolved oxygen
Eh:	Oxidation-reduction potential	mg/l	Milligrams per liter
		NS:	Not sampled

Final field parameter readings were measured upon completion of sample collection.

concentrations in these wells ranged from 2.28 mg/l in well MW-03S to 11.1 mg/l well MW-06S.

Bromide

The guidance value for bromide (2 mg/l) was exceeded in well MW-06D, which contained a concentration of 3.1 mg/l.

Chloride

The groundwater standard for chloride (250 mg/l) was exceeded in well MW-01D, which contained a concentration of 896 mg/l.

4.2.2 Historic Leachate Indicators

A comparison of the leachate indicator results in the 22 wells sampled between the third quarter 2004 to the second quarter 2004 sampling events is provided below. Since well MW-02S was not sampled during the third quarter 2004 sampling event, it is not included in the comparison. Concentration trends and exceedances for each well are summarized in Table 4-2. Historic data for leachate indicator parameters are summarized in Appendix A-1.

Alkalinity

Seven (7) of the 22 wells sampled showed an increase (defined as a change of at least 20% compared to the previous results) in alkalinity concentrations. The wells that showed an increase are MW-04D, MW-05S, MW-06S, MW-06I, MW-06D, MW-07I and MW-12I. Seven (7) wells (MW-01S, MW-01D, MW-02I, MW-05I, MW-05D, MW-11I and MW-11D) showed a decrease (defined as a change of at least 20% compared to the previous results) in alkalinity concentrations. The remaining 8 wells were consistent (defined as within 20% of previous results).

Key: I = Increasing greater than 20%
D = Decreasing greater than 20%
C = Consistent within 20%
Parameter exceeds standard/guidance value during the current sampling event.

Ammonia

Four (4) wells (MW-03S, MW-04D, MW-05S and MW-06S) showed increasing concentrations of ammonia. Twelve (12) wells (MW-01S, MW-01I, MW-01D, MW-02I, MW-05I, MW-05D, MW-06I, MW-06D, MW-07I, MW-11S, MW-11I and MW-12S) showed decreasing concentrations. The remaining 6 wells were consistent.

Biochemical Oxygen Demand

Two wells (MW-06S and MW-07I) showed increasing concentrations of biochemical oxygen demand. Six (6) wells (MW-03S, MW-04S, MW-04D, MW-05S, MW-05I and MW-11I) showed decreasing concentrations. The remaining 14 wells were consistent.

Bromide

Eight (8) wells (MW-01S, MW-02I, MW-03S, MW-05S, MW-05D, MW-06S, MW-06D and MW-12S) showed increasing concentrations of bromide. Two wells (MW-11S and MW-11I) showed decreasing concentrations. The remaining 12 wells were consistent.

Chemical Oxygen Demand

Well MW-01D showed an increase in chemical oxygen demand concentration. Ten (10) wells (MW-02I, MW-02D, MW-03S, MW-04I, MW-04D, MW-05S, MW-06S, MW-07I, MW-11S and MW-11D) showed decreasing concentrations. The remaining 11 wells were consistent.

Chloride

Seven (7) wells (MW-01I, MW-01D, MW-02I, MW-03S, MW-04D, MW-06D and MW-12I) showed increasing concentrations of chloride. Three (3) wells (MW-05I, MW-06S and MW-11I) showed decreasing concentrations. The remaining 12 wells were consistent.

Hardness

All 22 sampled wells showed decreasing concentrations of hardness.

Nitrate

Eleven (11) wells (MW-01S, MW-01D, MW-04I, MW-05S, MW-05I, MW-05D, MW-07I, MW-11S, MW-11I, MW-12S and MW-12I) showed increasing concentrations of nitrate. Four (4) wells (MW-03S, MW-04S, MW-06S and MW-06I) showed decreasing concentrations. The remaining 7 wells were consistent.

Total Phenols

All 22 sampled wells were consistent.

Sulfate

Five (5) wells (MW-01D, MW-05I, MW-06I, MW-11I and MW-12S) showed increasing concentrations of sulfate. Nine (9) wells (MW-01I, MW-02I, MW-02D, MW-03S, MW-04S, MW-04D, MW-05S, MW-06S and MW-06D) showed decreasing concentrations. The remaining 8 wells were consistent.

Total Organic Carbon

Well MW-06S showed an increase in total organic carbon concentration. Four (4) wells (MW-01S, MW-01D, MW-02I and MW-05I) showed decreasing concentrations. The remaining 17 wells were consistent.

Total Dissolved Solids

Fifteen (15) wells (MW-01D, MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-05D, MW-06S, MW-11S, MW-11I, MW-11D, MW-12S, MW-12I and MW-12D) showed increasing concentrations of total dissolved solids. Well MW-01I showed a decrease in total dissolved solids concentration. The remaining 6 wells were consistent.

Total Kjeldahl Nitrogen

Eight (8) wells (MW-01D, MW-05S, MW-06S, MW-06D, MW-07I, MW-11D, MW-12I and MW-12D) showed increasing concentrations of total kjeldahl nitrogen. Four (4) wells (MW-01I, MW-02D, MW-05I and MW-11S) showed decreasing concentrations. The remaining 10 wells were consistent.

4.2.3 Inorganic Parameters

The results of the inorganic parameters for the groundwater samples are presented in Appendix A-2. As shown by the third quarter 2004 analytical results, iron, manganese and sodium were detected at concentrations above the Class GA groundwater standards. The following provides a discussion of these exceedances.

Iron

Eleven (11) wells (MW-01S, MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-06S, MW-06I, MW-06D and MW-11D) exceeded the groundwater standard of 300 micrograms per liter (ug/l) for iron. Iron concentrations for the wells with exceedances ranged from 1,190 ug/l in well MW-11D to 61,000 ug/l in well MW-04D.

Manganese

Thirteen (13) wells (MW-01S, MW-02I, MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-05D, MW-06S, MW-06D, MW-07I and MW-11I) exceeded the groundwater standard of 300 ug/l for manganese. Manganese concentrations for the wells with exceedances ranged from 320 ug/l in well MW-02I to 8,490 ug/l in well MW-06D.

Sodium

Twelve (12) wells (MW-01S, MW-01I, MW-01D, MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-06S, MW-11S and MW-12S) exceeded the groundwater standard of 20,000 ug/l for sodium. Sodium concentrations for these wells with exceedances ranged from 20,800 ug/l in well MW-06S to 569,000 ug/l in MW-01D.

4.2.4 Historic Inorganic Parameters

A comparison of the inorganic parameter results in the 22 wells sampled between the third quarter 2004 and the second quarter 2004 sampling events is provided below. Since well MW-02S was not sampled during the third quarter 2004 sampling event, it is not included in the comparison. Concentration trends and exceedances for each well are summarized in Table 4-3. Historic data for inorganic parameters are summarized in Appendix A-2.

Cadmium

Four (4) wells (MW-06I, MW-06D, MW-11D and MW-12I) showed increasing concentrations of cadmium. Twelve (12) wells (MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-05D, MW-06S, MW-11S, MW-11I, MW-12S and MW-12D) showed decreasing concentrations. The remaining 6 wells were consistent.

MW-12I	Upgradient	I	I	D	D	I	I	I	I
MW-12D	Upgradient	D	C	I	D	C	D	I	C

Key: I = Increasing greater than 20%
D = Decreasing greater than 20%
C = Consistent within 20%
= Parameter exceeds standard/guidance value during the current sampling event.

Calcium

Seven (7) wells (MW-01I, MW-01D, MW-04D, MW-05S, MW-06S, MW-12S and MW-12I) showed increasing concentrations of calcium. Well MW-02I showed a decrease in calcium concentration. The remaining 14 wells were consistent.

Iron

Seven (7) wells (MW-04D, MW-05S, MW-06S, MW-06D, MW-07I, MW-11D and MW-12D) showed increasing concentrations of iron. Ten (10) wells (MW-01I, MW-01D, MW-02I, MW-02D, MW-04S, MW-05D, MW-06I, MW-11S, MW-12S and MW-12I) showed decreasing concentrations. The remaining 5 wells were consistent.

Lead

Nine (9) wells (MW-03S, MW-04S, MW-04I, MW-04D, MW-05S, MW-05I, MW-06S, MW-06I and MW-11D) showed increasing concentrations of lead. Seven (7) wells (MW-02I, MW-06D, MW-11S, MW-11I, MW-12S, MW-12I and MW-12D) showed decreasing concentrations. The remaining 6 wells were consistent.

Magnesium

Eight (8) wells (MW-01I, MW-01D, MW-04D, MW-05S, MW-06S, MW-11D, MW-12S and MW-12I) showed increasing concentrations of magnesium. Four (4) wells (MW-02I, MW-04S, MW-05I and MW-07I) showed decreasing concentrations. The remaining 10 wells were consistent.

Manganese

Eight (8) wells (MW-01I, MW-01D, MW-02I, MW-04S, MW-04D, MW-05S, MW-06D and MW-12I) showed increasing concentrations of manganese. Six (6) wells (MW-02D, MW-

06I, MW-07I, MW-11S, MW-12S and MW-12D) showed decreasing concentrations. The remaining 8 wells were consistent.

Potassium

Ten (10) wells (MW-01D, MW-04I, MW-04D, MW-05S, MW-07I, MW-11S, MW-11I, MW-11D, MW-12I and MW-12D) showed increasing concentrations of potassium. Well MW-02I showed a decrease in potassium concentration. The remaining 11 wells were consistent.

Sodium

Ten (10) wells (MW-01D, MW-03S, MW-04D, MW-05S, MW-06S, MW-06I, MW-06D, MW-11S, MW-12S and MW-12I) showed increasing concentrations of sodium. The remaining 12 wells were consistent.

In order to evaluate changes in groundwater, historic results for alkalinity, iron plus manganese, total dissolved solids and specific conductivity were graphed for the shallow, intermediate and deep zones for upgradient well clusters 1 and 11 and downgradient well clusters 4 and 5. These parameters were selected as possible indicators of landfill impacts to groundwater. These graphs are included in Appendix A-4.

4.3 Organic Vapor and Combustible Gas Monitoring

The results of the organic vapor and combustible gas monitoring are presented in Table 4-1. The results measured by the flame ionization detector (FID) show nondetectable readings in all wells except for wells MW-02I and MW-02D. The organic vapor results for these wells are 150 parts per million (ppm) and 20 ppm, respectively. All 36 wells showed a combustible gas reading of 0% of the lower explosive limit (LEL). The LEL for methane is 5% by volume or 50,000 ppm.

Section 5

5.0 DATA VALIDATION

Twenty-two (22) groundwater samples, two blind duplicates, two matrix spike/matrix spike duplicate (MS/MSD) sets and two field blanks were collected as part of the August 2004 Post Closure Groundwater Monitoring Program sampling event at the Sonia Road Landfill. The samples were analyzed for Routine Parameters as listed in 6 NYCRR Part 360. Sample analysis was performed by H2M Laboratories, a contractor to the IRRA, in accordance with SW-846 methods as specified in the Part 360 regulations. H2M Laboratories is approved under the New York State Department of Health Environmental Laboratory Approval Program (ELAP) for the analyses performed.

The data package submitted by H2M Laboratories was reviewed for completeness and compliance with the analytical methods. All of the quality assurance/quality control (QA/QC) samples (calibrations, spikes, duplicates and blanks), as well as 20% of the analytical results, were reviewed yielding a "20% validation" in conformance with the Sampling and Analysis Plan. The samples that were reviewed for calculation and transcription errors were MW-02D, MW-04I, MW-05I, MW-07I and MW-12I. The findings of the review process are summarized below.

All samples were analyzed within the method specified holding times. All QA/QC requirements (calibrations, MS/MSDs, duplicates and blanks) were met.

Blind duplicates were collected from wells MW-06D (Blind Duplicate 1) and MW-11S (Blind Duplicate 2), and the results were comparable between the samples, with the exception of the iron result for Blind Duplicate No. 2 and MW-11S, and the chloride result for Blind Duplicate No. 1 and MW-06D. The iron result for Blind Duplicate No. 2 was 137 ug/l, while for MW-11S, it was 40.4 ug/l. The iron results for both the Blind Duplicate No. 2 and MW-11S were considerably lower than historical results. The raw data were checked along with field measurements and no problems were found. The iron results for MW-11S should be deemed questionable and will be reviewed again after the November 2004 sampling event. While the chloride results for Blind Duplicate No. 1 (75 mg/l) and the sample MW-06D (8 mg/l) were not

comparable, the sample result was consistent with the historical results for MW-06D. Therefore, the chloride result reported for MW-06D is deemed to be valid and usable for environmental assessment purposes. Two samples (MW-06S and MW-12D) were collected and specified as the matrix spike and matrix spike duplicate. All spike recoveries were within QC limits.

No problems were found with the data package. All results are deemed valid and usable for environmental assessment purposes.

Completed data validation forms for the third quarter 2004 sampling event are provided in Appendix D.

Section 6

6.0 GROUNDWATER LEVEL MEASUREMENTS AND FLOW DIRECTION

Groundwater level measurements were obtained on August 19, 2004, from each of the 23 monitoring wells included in the Post Closure Groundwater Monitoring Program and the 13 additional wells not sampled as part of this program. The depth to water measurements, measuring point elevations and calculated groundwater elevations for the 36 monitoring wells are presented in Table 6-1.

Water level data from August 19, 2004 were used to construct groundwater elevation contour maps for the shallow (water table), intermediate and deep upper glacial aquifer wells at and in the immediate vicinity of the Sonia Road Landfill. Water table and potentiometric surface (for the intermediate and deep wells) elevation contour maps are presented on Figures 6-1, 6-2 and 6-3, respectively. Groundwater flow within the zones screened by the shallow, intermediate and deep wells is predominantly toward the southeast in the vicinity of the landfill. These maps are consistent with the maps previously prepared for the site.

7.0 CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

Groundwater Flow

Based on groundwater level measurements collected during the third quarter 2004 and the shallow (water table), intermediate and deep potentiometric surface elevation contour maps constructed for the site, groundwater flow at and in the vicinity of the Sonia Road Landfill is predominantly toward the southeast. This groundwater flow direction is consistent with previous maps prepared for the site.

Groundwater Quality

Based on a comparison of the third quarter 2004 results to the second quarter 2004 results and review of the historical trend graphs in Appendix A-4, groundwater quality in the vicinity of the Sonia Road Landfill has not changed substantially.

Since the only chloride concentration that exceeded the groundwater standard was in upgradient well MW-01D, the source of the detected chloride is not the Sonia Road Landfill. Similarly, the detected concentrations of iron, manganese and sodium are likely not indicative of landfill-influenced groundwater, since concentrations of these parameters above groundwater standards were detected in both upgradient and downgradient wells.

7.2 Recommendations

Based on the third quarter 2004 results and comparison of these results to historic data for the Sonia Road Landfill, it is recommended to continue to sample the groundwater monitoring wells in accordance with the SAP.

Since well MW-02S has not been able to be sampled during the last 9 quarterly sampling events due to the damaged well casing identified for the well, it is recommended that well MW-02S be abandoned.

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.
U*: Result qualified as non-detect based on validation criteria

NOTES
GV: Guidance Value NS: Not Sampled
ST: Standard
NA: Not Analyzed
: Parameter exceeds Standard/Guidance Value

QUALIFIERS
B: Compound was found in the method blank as well as the sample
U: Compound was analyzed for but not detected at the detection limit shown.
J: Compound was found at a concentration below the detection limit, value estimated
E: Concentration exceeds instrument calibration range; value estimated.
D: Result taken from analysis at a secondary dilution.
U*: Result qualified as non-detect based on validation criteria

NOTES
GV: Guidance Value NS: Not Sampled

LABORATORY USE ONLY

Discrepancies Between Sample Labels and COC Record? Y or N
Explain: _____

Samples were:
1. Shipped___ or Hand Delivered___ Airbill# _____
2. Ambient or chilled
3. Received in good condition: Y or N
4. Properly preserved: Y or N
5. Samples returned to lab ___ Hrs from collection.

COC Tape was:
1. Present on outer package: Y or N
2. Unbroken on outer package: Y or N
3. COC record present & complete upon sample receipt: Y or N

APPENDIX D

DATA VALIDATION FORMS

DATA VALIDATION – ORGANICS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella RP Date of Review: 10/7/04

I. Data Deliverable Requirements

A. Legible	Yes
B. Paginated	Yes
C. Arranged in order	Yes
D. Consistent dates	Yes
E. Case Narrative	Yes
F. Chain-of-Custody Record	Yes
G. Sample Data Complete	Yes
H. Standard Date Complete	Yes
I. Raw QC Data Complete	Yes

Comments: IRS031 & IRS032

22 wells, 2 FB, 2 MS/MSD's and 2 duplicates were collected and analyzed for Routine parameters

Blind dup#1 is a duplicate of MW-06D, Blind dup#2 is a duplicate of MW-11S

All results for the blind duplicates and the samples were comparable with the exception of Iron in Blind dup#2 and MW-11S 137 ug/l vs 40.4 ug/l respectively both of these results are considerably lower than historical results for MW-11S ~~(check turbidity)~~. RP

The chloride results for MW-06D and blind dup#1 were inconsistent (8 vs75 mg/l), however the result for the sample (8 mg/l) was consistent with historical results for that sample.

DATA VALIDATION – METALS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella Date of Review: 10/7/04

Associated Samples: _____

II. Initial Calibration

1. Were all initial instrument calibrations performed?

   Yes

   Comments:

_____

_____

_____

2. Were the initial calibration verification standards analyzed at the contract specified frequency?

   Yes

   Comments:

_____

_____

_____

3. Were the initial calibration results within the control limits listed below?

   For tin and mercury: 80-120% of the true value
   For all other metals: 90-110% of the true value

   Yes

   If "No", note analytes _____

DATA VALIDATION – METALS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella Date of Review: 10/7/04

Associated Samples: _____

III. Continuing Calibration

1. Were the continuing calibration verification standards analyzed at the contract specified frequency?

   Yes

   Comments:

_____

_____

_____

2. Were the continuing calibration results within the control limits listed below?

   For tin and mercury: 80-120% of the true value
   For all other metals: 90-110% of the true value

   Yes

   If "No", note analytes _____

DATA VALIDATION – METALS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella Date of Review: 10/7/04

IV. Blank Summary

A. Method Blanks

1. Was a method blank prepared and analyzed at the contract specified frequency?

   Yes

2. Were all the analytes below the CRDL in the method blank?

   Yes

Comments:

B. Calibration Blanks

1. Were all initial and continuing calibration blanks analyzed at the contract specified frequency/

   Yes

2. Were all the analytes below the CRDL in all the calibration blanks?

   Yes

Comments:

DATA VALIDATION – METALS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella Date of Review: 10/7/04

MW-6S, MW-12D

V. Duplicate Analysis

1. Was a duplicate prepared and analyzed at the contract specified frequency?

   Yes

   Comments:

2. Were control limits for the relative percent differences (RPD) met for each analyte?

   Yes

   Comments:

For sample values >5 times the CRDL, the RPD control limit is ±20%.

For sample values >5 times the CRDL, the RPD control limit is ±CRDL.

If sample results were outside of the control limits, all data associated with that duplicate sample should have been flagged with a "*".

Reviewer: R.Petrella Date of Review: 10/7/04

MW-6S, MW-12D

VI. Matrix Spike Analysis

1. Was a matrix spike prepared and analyzed at the contract specified frequency?

   Yes

   Comments:

2. Were the matrix spike recoveries within the contract specified control limits (75-125%)?

   Yes

   If "No", note analytes

Data should have been flagged with "N" for analytes out of control limits. If the sample concentration exceeds the spike concentration by a factor of four or more, no flag is required.

Reviewer: R.Petrella Date of Review: 10/7/04

VII. ICP Interference Check Sample Summary

1. Was the ICP serial dilution analyzed at the contract specified frequency?

   Yes

   Comments:

2. Were the serial dilution differences within the contract specified limits of ±w 10%?

   Yes

   Comments:

3. Was the ICP CRDL check standard analyzed at the contract specified frequency for the analytes required?

   Yes

   Comments:

DATA VALIDATION – METALS

Site Name: Sonia Rd Landfill Laboratory Name: H2M

Reviewer: R.Petrella Date of Review: 10/7/04

VII. ICP Interference Check Sample Summary (continued):

4. Was the ICP interference check sample analyzed at the contract specified frequency:

   Yes

   Comments:

5. Were the ICP interference check sample results within the control limit of ±w-20% of the mean value?

   Yes

   If "No", not analytes

Reviewer: R.Petrella Date of Review: 10/7/04

VIII. Laboratory Control Sample Analysis

1. Was a laboratory control sample analyzed at the contract required frequency?

   Yes

   Comments:

2. Were the percent recoveries within the control limits of 80-120% (except for Ag and Sb) for each analyte?

   Yes

   Comments:
