## ENVIRONMENTAL WASTE MANAGEMENT

Scanned & eDoced  
July 17, 2009

Ms. Cynthia Whitfield P. E.  
Environmental Engineer II  
NYS Dept. of Environmental Conservation  
Division of Environmental Remediation  
Remedial Bureau Section B, 11<sup>th</sup> Floor  
625 Broadway  
Albany, New York 12233-7015

**Re: Huntington/East Northport Landfill; NYSDEC Site #1-52-040;  
Groundwater & Surface Water Sampling & Analysis**

Dear Ms. Whitfield,

As required by the Record of Decision for the above referenced site, transmitted herewith please find copies of the "Groundwater & Surface Water Sampling & Analysis Report" for the East Northport Landfill September, 2009.

Please do not hesitate to call me if you have any questions or comments regarding these documents.

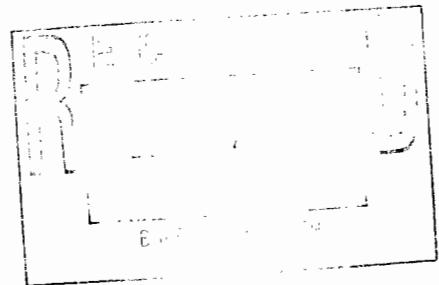

Sincerely,

Neal Sheehan,  
Director Environmental Waste Management

Enclosed: 1.) Groundwater & Surface Water Sampling & Analysis Report

## **Introduction**

This report presents the results of September, 2009 groundwater and surface water sampling and analyses performed as stipulated by the Record of Decision (ROD) for the East Northport Landfill Remedial Investigation/Feasibility Study. The ROD specifically requires the performance of "semi-annual sampling and analysis of eleven groundwater monitoring wells and seven surface water locations for leachate parameters." The location of each groundwater and surface water sampling point is illustrated in Figure 1. The scope-of-work performed each semi-annual event is presented below. A description of sampling methodology, quality assurance/quality control procedures, and a summary of analytical results follows.

## **Scope-of-Work**

The scope-of-work includes performance of the following items:

- 1) sampling of groundwater from monitoring wells CW1-S, CW1-M, CW2-M, CW4-S, CW4-M, EN1-M, EN6-S, EN6-M, EN7-M, EN9-M, EN10-M and surface water from locations SW-1 through SW-7;
- 2) analyzing collected groundwater samples for *volatile organic compounds* by EPA method 624 with TCL parameter list and ASP category B reporting of data; *metals* (aluminum, arsenic, chromium, cadmium, calcium, iron, lead, magnesium, mercury, potassium, sodium); and *leachate indicators* (alkalinity/bicarbonate, ammonia, nitrate, chloride, TDS, hardness, sulfate);
- 3) analyzing collected surface water samples for *volatile organic compounds* and *leachate indicators* (as above); and
- 4) measuring and recording appropriate field data including temperature, pH, specific conductivity, dissolved oxygen, salinity and turbidity.

## **Sampling Methodology**

Sampling methodology includes purging a minimum of 3-5 casing-volumes of groundwater from each monitoring well, via a submersible centrifugal pump (Grundfos Redi-Flo2) with per-well dedicated tubing, prior to sample collection. During well-purging activities, the field parameters dissolved oxygen, specific conductivity, temperature, pH, salinity and turbidity are measured and recorded on a per-casing-volume basis. Upon the stabilization of these values to within 10%, groundwater samples are collected. In order to negate the potential for cross-well contamination, the Grundfos Redi-Flo2 is cleaned internally and externally with an Alconox and water solution, followed by two fresh water rinses, between each groundwater sampling location.

Surface water sampling methodology includes submerging laboratory-provided sample containers at each sampling point and establishing a smooth flow of water into them until filled. Furthermore, surface water samples are collected following a minimum of 3 days without precipitation prior to sampling to minimize the influence of surface water runoff from adjacent land surfaces and roadways. Collected surface water samples, therefore, reflect stream base-flow and, for the most part, the quality of groundwater resources.

Groundwater from monitoring wells CW1-S, CW1-M, CW2-M, CW4-S, CW4-M, EN1-M, EN6-S, EN6-M and EN7-M was sampled September 16, 2009. Groundwater from monitoring wells EN9-M and EN10-M was collected September 17, 2009. Surface water samples (i.e., SW-1 – SW-7) were collected September 21, 2009. Following the completion of sampling activities, collected samples were submitted under chain-of-custody control to New York State Department of Health certified Phoenix Environmental Laboratories, Inc. for chemical analysis. A copy of the original laboratory "Sample Data Summary Package" is presented in Appendix 1.

Field parameters measured and recorded in relation to groundwater and surface water sampling points are summarized on Table 1. Note that data associated with groundwater samples reflects the last value measured during well-purging activities.

## **Quality Assurance/Quality Control**

A narrative (conformance/nonconformance summary) of QA/QC procedures practiced by Phoenix Environmental Laboratories, Inc. - including instrument calibrations, analysis of method blanks, matrix spike blanks, and the percent recovery of surrogates

## R & C Formation, Ltd.

---

(system monitoring compounds) - is presented in the afore-mentioned "Sample Data Summary Package." Matrix spike/matrix spike duplicates (MS/MSD's) were collected to supplement both groundwater (EN7-M) and surface water analyses (SW-2).

In addition, trip blanks representing groundwater (TB-GW) and surface water samples (TB-SW) were analyzed for volatile organic compounds as a means to evaluate potential sources of contamination in sample container preparation, method blank water and sample transport. A field blank (FB9-16) representing groundwater sampling activities was also analyzed to assure the integrity of sample containers, sampling equipment and procedures.

"Blind duplicates," collected from groundwater monitoring well EN7-M (identified as GW-DUP) and surface water sampling location SW-2 (identified as SW-DUP), were collected to assess the accuracy of reported analytical results. "Blind duplicate" samples were analyzed for all groundwater and surface water parameters, respectively.

### Summary of Analytical Results

#### *QA/QC Samples*

The volatile organic compound *methylene chloride*, a typical "in-house" laboratory analytical contaminant, was detected in QA/QC sample FB9-16. Also detected in this sample were the volatile organic compounds *benzene* and *toluene*. Consequently, the detection of either of the above-mentioned compounds in collected groundwater or surface water samples is not considered valid.

Analytical results in relation to groundwater and surface water blind duplicates are, however, comparable (see Tables 2, 2A, 3 and 3A). Therefore, the results of groundwater and surface water analyses summarized below are considered accurate.

#### *Groundwater*

Analytical results in relation to volatile organic compounds and metals/leachate indicators - including comparisons with New York State Department of Environmental Conservation (NYSDEC) Class GA Drinking Water Standards - are summarized on Table 2 and Table 2A, respectively.

As shown on Table 2, *trichloroethene* (EN7-M) is the sole volatile organic compound detected at or above its associated NYSDEC Class GA Drinking Water Standard.

## R & C Formation, Ltd.

---

As shown on Table 2A, metals detected in excess of NYSDEC Class GA Drinking Water Standards include *arsenic* (CW1-S, CW1-M), *cadmium* (CW4-S), *iron* (CW1-S, CW1-M, CW4-S, EN7-M and EN10-M), *magnesium* (EN7-M) and *sodium* (CW1-S, CW1-M, CW2-M, EN1-M, EN6-S, EN6-M, EN7-M, EN9-M). Leachate indicators detected at or in excess of NYSDEC Class GA Drinking Water Standards include *ammonia* (CW1-S, CW1-M) and *nitrate* (EN1-M).

### *Surface Water*

Analytical results in relation to volatile organic compounds and leachate indicators - including comparisons with New York State Department of Environmental Conservation (NYSDEC) Class GA Drinking Water Standards - are summarized on Table 3 and Table 3A, respectively.

As shown on Table 3, volatile organic compounds were not detected in any of the collected surface water samples above NYSDEC Class GA Drinking Water Standards.

As shown on Table 3A, the sole leachate indicator detected in excess of its associated NYSDEC Class GA Drinking Water Standard is *chloride* at surface water sampling point SW-7. As reported previously, elevated concentrations of "salts" at this sampling point are typical and attributable to the influence of saline surface water; sample SW-7 is collected from within the tidal portion of Sunken Meadow Creek.

### *Historical Analysis*

A tabulated comparison of historical analytical results for the period-of-record dating from June, 1996 to September, 2009 is presented in Section HA-1A. Presented below is a summary of inconsistencies with the most recent analyses, completed April, 2009. With the exception of these inconsistencies, analytical results in relation to September, 2009 monitoring activities continue to be consistent with past events (i.e., June, 1996, April & September, 1997, April & September, 1998, April & September, 1999, April & September, 2000, April & September, 2001, April & September, 2002, April & October, 2003, June & October, 2004, April & September, 2005, August & November, 2006, July & November, 2007, April & September, 2008, April, 2009).

### Groundwater

\* The concentration of *cadmium* increased in groundwater sampled from monitoring well CW4-S from 0.7 micrograms per liter ( $\mu\text{g/l}$ ), a concentration below NYSDEC's Class GA Drinking Water Standard of 5.0  $\mu\text{g/l}$ , to 6.9  $\mu\text{g/l}$ .

## R & C Formation, Ltd.

---

- \* The concentration of *iron* increased in groundwater sampled from monitoring wells CW1-M, CW-4S, EN7-M and EN10-M from 170.0 µg/l, 6.0 µg/l, 46.0 µg/l and 270.0 µg/l, respectively - concentrations below NYSDEC's Class GA Drinking Water Standard of 300.0 µg/l - to 22,900.0 µg/l, 825.0 µg/l, 513.0 µg/l and 1,610.0 µg/l, respectively.
- \* The concentration of *nitrate* increased in groundwater sampled from monitoring well EN1-M from 9.9 milligrams per liter (mg/l), a concentration below NYSDEC's Class GA Drinking Water Standard of 10.0 mg/l, to 10.0 mg/l.

### Surface Water

- \* The concentration of *sulfate* decreased at surface water sampling point SW-7 from 330.0 mg/l, a concentration above NYSDEC's Class GA Drinking Water Standard of 250.0 mg/l, to 86.0 mg/l.

**Note:**

ND(: Compound not detected at the method detection limit  
 NYSDEC Class GA Standards: New York State Department of Environmental Conservation Ambient Water Quality Standards for Source of Drinking Water Title 6 Part 703  
 (per June 1998 revision)

GV: NYSDEC Class GA Guidance Value for Source of Drinking Water

NS/GV: No NYSDEC Standard or Guidance Value Established

\*Standard of 0.4 applies to sum of cis and trans 1,3-Dichloropropene

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

B: The analyte was found in an associated blank, as well as in the sample

Note:

ND( ): Compound not detected at method detection limit

\*1,2-Dichloroethene, Total: Sum of Trans and Cis 1,2-Dichloroethene

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NYSDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

Note:

ND( ): Compound not detected at method detection limit

\*1,2-Dichloroethene, Total: Sum of Trans and Cis 1,2-Dichloroethene

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit  
 Bold indicates value above NYSDDEC Class GA Standard  
 B: The analyte was found in an associated blank, as well as in the sample

Note:

ND(): Compound not detected at method detection limit

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NYSDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

E: Reported value is estimated because of the presence of interference

NA: Not Accessible

Note:

ND(): Compound not detected at method detection limit

\*1,2-Dichloroethene, Total: Sum of Trans and Cis 1,2-Dichloroethene

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NYSDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

Note:

ND(): Compound not detected at method detection limit

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit  
Bold indicates value above NYSDEC Class GA StandardB: The analyte was found in an associated blank, as well as in the sample  
E: Reported value is estimated because of the presence of interference

Note:

ND(: Compound not detected at method detection limit

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NYSDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

E: Reported value is estimated because of the presence of interference

Note:

ND(): Compound not detected at method detection limit

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NYSDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

E: Reported value is estimated because of the presence of interference

Note:

ND(): Compound not detected at method detection limit

\*1,2-Dichloroethene, Total: Sum of Trans and Cis 1,2-Dichloroethene

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NYSDDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

Note:

ND(): Compound not detected at method detection limit

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NYSDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

E: Reported value is estimated because of the presence of interference

Note:

ND( ): Compound not detected at method detection limit

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NY SDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

E: Reported value is estimated because of the presence of interference

Note:

ND(: Compound not detected at method detection limit

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NYSDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

E: Reported value is estimated because of the presence of interference

Note:

ND(): Compound not detected at method detection limit

J: Indicates an estimated value; compound is present at a concentration less than specified detection limit

Bold indicates value above NY SDEC Class GA Standard

B: The analyte was found in an associated blank, as well as in the sample

E: Reported value is estimated because of the presence of interference

## Organic Data Flags

MDL:	Method Detection Limit The minimum reportable concentration that can be measured with 99% confidence, as defined in 40CFR part 136 (Appendix B).
PQL(RL):	Practical Quantitation Level or Reporting Level This value is at or above the MDL and is supported by the lowest calibration standard.

- Q Qualifiers:

- U - The compound was analyzed for but not detected at or above the MDL. The number immediately preceding the "U" represents the PQL reporting level corrected for percent solids, weight and/or volume calculations, and dilution factors.
- J - The value is estimated. This flag is used
  - a) on form 1 when the compound is reported above the MDL, but below the PQL, and
  - b) on the Tentatively Identified Compound (TIC) form for all compounds identified
- JL- The value is estimated. This flag is used on the form 1 when a compound is evaluated to the requested criteria. This value may be below the MDL.
- N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified.
- S - This compound is a solvent that is used in the laboratory. Laboratory contamination is suspected if concentration is less than five times the reporting level.
- B - This compound was also present in the method blank
- D - The reported concentration is the result of a diluted analysis.
- E - The reported value is estimated because the concentration exceeded the calibration range.
- A - Indicates that the tentatively identified compound is a suspected aldol condensation product.

## Inorganic Data Flags

- C (Concentration) Qualifiers:
  - B - The reported value was obtained from a reading that was less than the Reporting Level (RL) but greater than or equal to the Instrument Detection Limit (IDL)
  - U - The analyte was analyzed for but not detected at or above the IDL
- Q Qualifiers:
  - E - The reported value is estimated because of the presence of interference. An explanatory note shall be included in the project narrative (if the problem applies to all samples) or on the specific FORM I-IN (if it is an isolated problem).
  - M - Duplicate injection precision not met.
  - N - Spiked sample recovery not within control limits.
  - S - The reported value was determined by the Method of Standard Additions (MSA).
  - W - Post-digestion spike for Furnace AA analysis is out of control limits (85-115%), while sample absorbance is less than 50% of spike absorbance.
  - \* - Duplicate analysis not within control limits.
  - + - Correlation coefficient for the MSA is less than 0.995.
- M (Method) Qualifiers:
  - "P" - ICP
  - "A" - Flame AA
  - "F" - Furnace AA
  - "PM" - ICP when Microwave Digestion is used
  - "AM" - Flame AA when Microwave Digestion is used
  - "FM" - Furnace AA when Microwave Digestion is used
  - "CV" - Manual Cold Vapor AA
  - "AV" - Automated Cold Vapor AA
  - "CA" - Midi-Distillation Spectrophotometric
  - "AS" - Semi-Automated Spectrophotometric
  - "C" - Manual Spectrophotometric
  - "T" - Titrimetric
  - "G" - Gravimetric
  - "TC" - Total Organic Carbon Analyzer
  - "TX" - Total Organic Halide Analyzer
  - "TB" - Turbidimeter
  - "IC" - Ion Chromatograph
  - "CL" - Calculation
  - "M" - Meter
  - "V" - Visual
  - " " - where no data have been entered
  - "NR" - the analyte is not required to be analyzed

## NY ANALYTICAL SERVICES PROTOCOL

October 14, 2009

SDG I.D.: GAS25793

EAST NORTHPORT GROUND WATER R&C Formation, LTD

### Conformance / Non-Conformance Summary

#### **Volatile Organic Compounds:**

Form 2: All surrogate recoveries met method criteria.

Form 3: Lab Control Sample/Lab Control Sample Duplicate (LCS/LCSD) and Matrix Spike/Matrix Spike Duplicate (MS/MSD):  
Criteria: 90% of compounds are within 70-130% for LCS/LCSD.

All QC associated with this sample set met method criteria. Compounds with spike recoveries and/or RPDs outside method control limits are flagged with an asterisk.

Form 5: BFB Tunes met method criteria. All samples were analyzed within 12 hours from their injection.

Form 6: The initial calibration met SW-846/8260 criteria for all system monitoring compounds (CCC and SPCC). The minimum RRF for 2-Chloroethyl vinyl ether was not met for all points, but the average was achieved. Method 8260 provides SPCC, CCC and minimum response factor criteria only for a 5mL purge. This sample set was analyzed by 25mL purge in order to achieve lower reporting levels. The minimum response factor criteria listed on form 7 is used only as a guide.

Form 7: The continuing calibration met SW-846/8260 criteria for all system monitoring compounds (CCC and SPCC).

Form 8: All internal standard areas and retention times met method criteria.

#### **Observations:**

The client requested the 624 compound list for this sample set. The laboratory analyzed this sample set purging 25mLs rather than the standard 5mLs in order to achieve lower reporting limits. Method 8260 was used as a guideline for this analysis. Method 8260 provides SPCC, CCC and minimum RRF criteria for a 5mL purge only.

No other observations are noted.

## NY ANALYTICAL SERVICES PROTOCOL

October 23, 2009

SDG I.D.: GAS25793

EAST NORTHPORT GROUND WATER R&C Formation, LTD

### Conformance / Non-Conformance Summary

#### Inorganic Package

Form 1 (Analytical Results Summary):

Form 2A&B (Calibration Standard Summary) met criteria.

Form 3 (Instrument and Preparation Blank Summary): The arsenic concentrations are elevated above the RL in certain instrument blanks. A sample bias is not suspected because the concentration of arsenic in the samples were either below the RL or more than 5x greater than those found in the instrument blanks. The iron concentration is elevated above the RL in the method blank. A sample bias is not suspected because the concentration of iron in the samples were more than 5x greater than that found in the method blank.

Form 4 (ICP Interference Check Sample) met criteria.

Form 5 (Spike Summary) met criteria. Due to high concentrations of calcium, magnesium and sodium in the QC sample, a recovery could not be calculated for the MS/MSD.

Note that the laboratory performs a MS and MSD; only the MS is reported on Form 5.

Form 6 (Duplicate Summary) met criteria

Form 7 (Laboratory Control Sample) met criteria.

Note that the laboratory performs a LCS and LCSD; only the LCS is reported on Form 7.

Form 9 (ICP Serial Dilution) met criteria.

Other observations: Note that on all forms, wet lab tests (non-metals) are reported in mg/L values.

SDG I.D.: GAS26717

EAST NORTHPORT SURFACE WATER

### Conformance / Non-Conformance Summary

#### Inorganic Package

Form 1 (Analytical Results Summary):

Form 2A&B (Calibration Standard Summary) met criteria.

Form 3 (Instrument and Preparation Blank Summary) : Calcium concentration is elevated in some continuing calibration blanks. A sample bias is not suspected because the instrument blanks bracketing the samples were within criteria.

Form 4 (ICP Interference Check Sample) met criteria.

Form 5 (Spike Summary) : met criteria.

Note that the laboratory performs a MS and MSD; only the MS is reported on Form 5.

Form 6 (Duplicate Summary) met criteria

Form 7 (Laboratory Control Sample) met criteria.

Note that the laboratory performs a LCS and LCSD; only the LCS is reported on Form 7.

Form 9 (ICP Serial Dilution) : Spectral Interference was observed for Calcium and Magnesium.

Form 13 (Preparation Log):
