

TOWN OF HUNTINGTON

FRANK P. PETRONE, *Supervisor*

ENVIRONMENTAL WASTE MANAGEMENT

March 15, 2012

Ms. Cynthia Whitfield P.E.
Environmental Engineer II
NYS Dept. of Environmental Conservation
Division of Environmental Remediation
Remedial Bureau A Section B., 11th Floor
625 Broadway
Albany, New York 12233-7015

**Re: Huntington/East Northport Landfill; NYSDEC Site #1-52-040;
Environmental Monitoring Report**

Dear Ms. Whitfield,

As required by the Record of Decision for the above referenced site, transmitted herewith please find copies of the "Landfill Gas and Control System Monitoring Report" for the East Northport Landfill for the month of January and February 2012.

Please do not hesitate to call me if you have any questions or comments regarding these documents.

Sincerely,

Neal Sheehan,
Director Environmental Waste Management

RL:rl

**Landfill Gas and Control System Monitoring
Town of Huntington East Northport Landfill
East Northport, New York
February, 2012**

Introduction

Presented herein are the results of February, 2012 landfill gas and control system monitoring activities performed at the Town of Huntington East Northport Landfill, as stipulated by the New York State Department of Environmental Conservation.

The primary landfill gas migration control system consists of thirty active landfill gas control wells connected - via a single header pipe forming a complete loop around the 44 acre East Northport Landfill - to one blower station. Landfill gas monitoring wells (consisting of 3-4 probes screened from approximately 5-70 feet below grade), situated outside of the aforementioned header pipe, provide a means to verify the control system's efficacy. Separate landfill gas control and monitoring systems are located at adjacent Animal Control and Resource Recovery Facilities.

The landfill area and pertinent components of the landfill gas monitoring and control system are depicted in Figure 1. The scope-of-work completed (per our agreement with the Town of Huntington Department of Environmental Waste Management dated October 20, 2011) precedes a summary of results. A discussion of methane monitoring data - with an emphasis on trends and occurrence - and the system's physical and operating condition follows.

Scope-of-Work

The scope-of-work includes performance of the following on a monthly basis:

- 1) Monitoring of all probes in 41 landfill monitoring wells and up to 5 probes around the Town Animal Control Facility for methane gas and gas pressure.
- 2) Monitoring of 30 methane control wells and blower station for temperature, flow rate, vacuum, methane and oxygen (balance of the control system to be checked and adjustment to wells and to blower intake made, if necessary).

SITE LOCATOR
APPROXIMATE SCALE: 1" = 2000'

R & C Formation, Ltd.

- 3) Examination of 5 condensate traps in the control system for proper operation and water accumulation.
- 4) Noting of any problems, damage, missing parts etc. at each monitoring well, methane control well, condensate trap, Animal Control Facility probes and blower station.

Summary of Results

General

Reported monthly monitoring activities were performed February 21, 2012. Climatic conditions for the monitoring period are as follows:

Temperature: 34 ($^{\circ}$ F); Barometric Pressure: 30.16 (in. Hg); Relative Humidity: 71.0%; Precipitation: 0.00 inches; Wind Speed & Direction: 7.0 mph, southerly.

Monitoring Wells

A summary of measured and recorded landfill gas monitoring well data is shown on Table 1. As shown, methane was not detected throughout the entire monitoring well network.

LFG Control Wells

Table 2 presents a summary of measured and recorded landfill gas control well data; including the system's blower station where 2 "inlet" measuring points (Blower Station 1 & 2) and 1 "outlet" measuring point (Blower Station 3) are located. As shown, control well vacuum values (i.e., negative pressure), a direct indicator of the system's balance, range from 0.00 - -0.82 (in. H₂O). "Extracted" methane values range from 0.0 – 0.6%.

Condensate Traps

Standing water measured within condensate traps CD-1 (4.5 feet), CD-2 (5.8 feet), CD-3 (7.7 feet), CD-4 (8.0 feet) and CD-5 (4.9 feet) was evacuated, as per usual, upon the completion of monitoring activities.

R & C Formation, Ltd.

Discussion

Methane Monitoring Data

Table 3 summarizes measured and recorded methane concentrations detected at landfill gas monitoring wells throughout the period-of-record from January, 2006 through February, 2012. As shown on Table 3, methane has historically been detected sporadically and at low levels at 14 site monitoring wells. The highest concentration detected throughout the entire landfill gas monitoring well network continues to be 5.0 %; as measured at Animal Control Facility monitoring well AS-NE during March, 2001 monitoring activities (see October, 2007 report).

Methane has not been detected at primary landfill gas migration control system monitoring wells since June, 2002, when a nominal concentration (0.1%) was recorded at MW-49. The sporadic nature of low-level methane detections indicates that landfill gas control systems in relation to both the Animal Control Facility and East Northport Landfill continue to perform effectively.

Methane concentrations detected at landfill gas control wells during the period-of-record from January, 2006 through February, 2012 are summarized on Table 4. As shown on Table 4, reported values are generally consistent throughout this period.

Physical and Operating Condition

Based upon current and historical landfill gas monitoring data summarized above, the East Northport Landfill's primary landfill gas control system continues to effectively negate the off-site migration of methane. As shown in Appendix 1, vacuum values measured since January of 2010 have been historically low throughout the system. This phenomenon is attributed to precipitation and subsequent control well flooding.

The physical condition of system monitoring wells and control wells is noted on Table 1 and Table 2, respectively. As shown, with the exception of monitoring well MW-13 (riser pipe disconnected/missing at probe B) and control well CWII-6 (flooded), monitoring wells and control wells were accessible and in good condition. Blower station pump # 1 was in operation during February monitoring activities and all control wells continue to be set in the full-open-position. This full-open-position will be maintained for an evaluation period and modified if/as necessary.

R & C Formation, Ltd.

Recommendations

- * In the event that methane is detected at any monitoring well associated with the primary landfill gas migration control system, recommence the monitoring of off and on-site structures.
- * Assess occurrence of methane versus landfill area (i.e., identify dominant landfill gas production zones).
- * Continue assessment of potential impact of all control valves at full-open-position on system-wide vacuum/methane levels.
- * Increase the inspection (e.g., weekly) and, when necessary (i.e., following extended periods of precipitation or snow melt), increase the pumpage periodicity of standing water within condensate traps CD-1 through CD-5. Also assess weather or not standing water is within select control wells (e.g., CWII-6) and remove, when present.
- * Confirm anticipated increase in control well vacuum values with decreasing precipitation. In the event vacuum values do not increase, test the primary landfill gas migration control system header pipe for the presence of blockages and/or leaks.
