PROJECT STATUS MEMORANDUM

NO. 02-08

TO: Pamela Tames, USEPA

FROM: Mark M. Goldberg, P.E.
Tunde H. Komubes-Sandor

DATE: April 7, 2008

PROJECT: Rowe Industries Superfund Site
Ground-Water Recovery and Treatment System
February 2008 Status Report
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of system performance, operation and maintenance, and monitoring activities for the site from February 1, 2008 through February 29, 2008. The report includes a summary of system performance parameters, system operation parameters, and analytical results for ground water, system effluent samples, and air quality results.

SUMMARY OF SYSTEM PERFORMANCE AND OPERATION
(February 1, 2008 through February 29, 2008)

1. Hours of operation during the reporting period: 598 hours (86%)
2. Alarm conditions during the reporting period: See Table 1
3. Was the SPDES VOC discharge permit criteria achieved: yes, (Table 2)
4. Total volume of water pumped during the reporting period: 14,491,344 gal.
5. Was the system effluent flow below the SPDES limit of 1,023,000 gpd: yes, (Graph 1)
6. Mass of VOCs recovered during the reporting period: 0.6 pounds
7. Cumulative mass of VOCs recovered since startup on 12/17/02: 209.2 pounds
(calculations can be provided upon request)
8. Effluent VOC vapor concentration for the reporting period: 0.16 mg/m³ (Table 3)
9. Was the effluent VOC vapor emission rate below 0.022 lbs/hr.: yes (0.00116 lbs/hr)
(calculations can be provided upon request)

GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Table 4 presents a summary of the quality results for water samples collected from recovery wells. Graph 2 presents PCE concentrations for each recovery well. For wells with water quality that meets or is approaching remedial criteria, Graph 3 presents PCE concentrations at an expanded scale in order to compare them to the PCE aquifer restoration concentration of 5 ug/L. Laboratory analytical reports are included as Appendix I.

Well	Volume pumped (gal)	Average Flow (gpm)	Lowest Measured Flow (gpm) ¹	Total VOC Concentration (µg/L)	VOC Recovery (lbs)
RW-2 ⁴	293,750	27	13	8.5	0.02
RW-3 ³	616,025	35	10	0	0
RW-4 ²	701,023	20	10	2.1	0.01
RW-5	1,784,026	50	50	0	0
RW-6	524,905	15	15	25.4	0.11
RW-7	2,101,494	70	69	11	0.19
RW-8	2,104,860	55	41	0	0
RW-9 ²	2,690,142	75	16	0	0

¹Lowest measured flows are based on the lowest average 24-hour pumping rates for each well recorded to date.

²The RW-4 and RW-9 flow meters were not functioning properly so the total volume pumped was calculated using the monthly average flow reading and the hours of operation for the month.

³RW-3 was shut down on December 5, 2007 and was off until February 12, 2008 as part of a planned temporary shutdown in order to evaluate the effect on contaminant concentrations in the ground-water recovered by RW-2. On February 12, 2008 RW-3 was restarted after the RW-2 pump malfunctioned. Flow rates and volume pumped are for February 12 through 29 only.

⁴RW-2 shut down on February 8, 2008 due to a pump fault alarm. Flow rates and volume pumped are for February 1 through 8, 2008. A water quality sample was not collected for RW-2 this month; therefore the total VOCs from January 2008 was used to compare VOC recovery from RW-2.

Based on the results of the updated ground-water model for the site, the plume is not migrating beyond the influence of the FSP&T system if the recovery well pumps operate at or above the “Lowest Measured Flows”. The average monthly pumping rates for all recovery wells in operation are at or above the “Lowest Measured Flows”. The updated ground-water model is discussed in the 2006 Annual Report for the site.

On February 8, 2008, RW-2 shut down due to a pump fault alarm. Troubleshooting the alarm indicated that the pump or pump motor would have to be replaced. A replacement 2 horsepower motor and pump was ordered and RW-3 was restarted on February 12, 2008 until the RW-2 pump and/or motor can be replaced. Because the capture zones of RW-2 and RW-3 overlap slightly, RW-3 was used as a temporary substitute for RW-2. The RW-3 flow set point was increased from 25 gallons per minute (gpm) to 35 gpm.

Alpine Environmental, Inc. conducted FSP&T system maintenance on February 11 and 12, 2008. Maintenance activities consisted of pressure washing and vacuuming the system influent piping, flow meters, well head piping and flow meters at RW-2, RW-4, RW-8 and RW-9, cleaning the Equalization (EQ) Tank, the inspection and replacement of the broken air stripper blower belts, and cleaning the drip trays located beneath the bag filter housings.

On February 12, 2008, a technician from Badger Meter inspected, tested and recalibrated the tower influent flow (EQ-TP101), effluent, off-site combined, on-site combined and RW-9 flow meter transmitters. The flow meter transmitters were calibrated to one percent (1%) of actual flow, which is the limit of accuracy for the flow meter transmitters. The system, effluent and off-site combined flow meter transmitters were successfully recalibrated and are now displaying and transmitting accurate flow readings to the computer, according to the Badger Meter technician. In addition, a crossed wire was discovered and corrected inside the flow meter display at RW-9. The flow reading from the on-site combined flow meter could not be corrected; however, the badger meter technician indicates that a simulated flow signal from the frequency generator was successfully transmitted to the main control panel computer (via the flow meter transmitter). Therefore, according to the Badger Meter technician, the "no flow" reading from the on-site combine flow meter is caused by malfunctioning mechanical components in the "wet end" of the flow meter. A new rotor, spindle and a reed switch have been ordered and will be installed into the on-site combined flow meter.

BAG FILTER STATUS

The following table presents an operational summary of the bag filter usage and configuration for the reporting period.

Dates	Bank 1	Bank 2	Bank 3
February 1 to 29	7 of 8 housings used with 400 micron bag filters	7 of 8 housings used with 400 micron bag filters	Not active

No modifications were made to the filter bank configuration or operation during this reporting period.

OTHER O&M ACTIVITIES AND FUTURE O&M ACTIVITIES

Other O&M activities conducted in February 2008 include:

- On February 5, 2008, RW-1 low level alarms occurred because of a faulty pressure transducer; RW-1 was shut down on July 13, 2005;
- On February 8, 2008, RW-2 pump fault alarm occurs, RW-2 shuts down, FSP&T system remains operating with RW-4 through RW-9;
- On February 11, 2008, FSP&T system was shut down for scheduled maintenance by Alpine Environmental, Inc.;
- On February 12, 2008, FSP&T system maintenance was completed, and system was restarted. A technician from Badger Meter tested and recalibrated the tower influent (EQ TP-101), effluent, on-site combined, off-site combined and RW-9 flow meter transmitters. RW-3 was restarted to replace RW-2, which remains inoperable until a replacement pump and motor can be installed; and
- On February 20, 2008, the tower influent (EQ-TP101) flow meter totalizer was reset, and the low level alarm set point for RW-1 was adjusted to prevent the recurring low level alarms at RW-1 caused by the malfunctioning pressure transducer.

Future O&M activities scheduled for the spring of 2008 include:

- Replace the malfunctioning pressure transducer in RW-8;
- Replace the pump motor in RW-2;
- Replace exterior man-way cover near the top of the air-stripper tower;
- Evaluate option of repairing/recalibrating existing air flow meter compared to purchasing a new hand held air flow meter;
- Evaluate the effect on contaminant concentrations in RW-2 if RW-3 is not operating;
- Conduct semi-annual ground-water quality monitoring; and
- Measure static and pumping depth-to-water levels in all recovery and monitor wells.

MAINTENANCE LOG
(February 1, 2008 through February 29, 2008)

Date	Time	System Changes/Modifications	Personnel
2/3/2008	4:42 PM	RW-1 Low level alarm (disregarded, RW-1 not operating), RW-1 was shut down on July 13, 2005. A faulty pressure transducer is the cause of the alarm. System remains operating.	
2/5/2008	9:43 AM	RW-1 Low level alarm (disregarded, RW-1 not operating), RW-1 was shut down on July 13, 2005. A faulty pressure transducer is the cause of the alarm. System remains operating. Acknowledged alarm.	SH
		Changed multi-bag filter bags (400 mm) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	SH
2/8/2008	7:01 PM	RW-2 Pump Fault alarm. RW-2 shuts down, system remains operating with recovery wells RW-4 through RW-9.	
2/11/2008	8:26 AM	The FSP&T system was shut down for scheduled cleaning of influent pipes and flow meters using high pressure jet washing equipment and vacuum truck. RW-2, 4, 8, 9 and building flow meters were cleaned on 2/11 and 2/12.	Alpine/SH
		Equalization (EQ) tank cleaned with vacuum truck.	Alpine/SH
	2:47 PM	Air stripper blower low pressure alarm was caused by broken V-belts. New V-belts were installed and the system remains off until cleaning activities are completed.	Alpine/SH
2/12/2008	9:08 AM	EQ Tank low level alarm associated with removal of water from EQ tank during cleaning.	Alpine/SH
	9:14 AM	Restarted FSP&T system in preparation for flow meter calibration work with Badger Meter Representative. The system (EQ-TP101), effluent, RW-9, off-site combined and on-site combined flow meters were calibrated.	MC (Badger)/MG
		As part of maintenance activities the drip trays under the bag filter housing were cleaned.	Alpine/SH
		Following cleaning, there was difficulty in re-starting the RW-4 pump because of a faulty motor disconnect switch. After toggling the switch several times, the pump motor started. Troubleshooting of the RW-4 motor disconnect switch will be initiated.	Alpine/SH
	12:00 PM	RW-3 was restarted while RW-2 remains inoperable with a faulty motor. The flow set point of RW-3 was increased from 25 gpm to 35 gpm.	MG
		The flow meter reading from RW-9 was corrected during calibration/troubleshooting work for the flow meters.	MC (Badger)/MG
2/13/2008		The RW-7 vault door is broken. A boulder was placed on the vault to keep the doors shut as a temporary measure until the vault can be repaired.	SN
2/17/2008	9:26 AM	Communication Failure Alarm, system shutdown.	
2/20/2008		Changed multi-bag filter bags (400 mm) in Banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	SH
	10:25 AM	Rebooted computer, reset alarms and restarted system.	SH
		Reset the system (EQ-TP-101) flow totalizer.	SH
		Adjusted the RW-1 low level alarm set point in order to prevent recurring low level alarms caused by the faulty pressure transducer.	SH
2/27/2008		Changed multi-bag filter bags (400 mm) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	SH

SPDES: State Pollutant Discharge Elimination System

mg/l: Milligrams per liter
ug/l: Micrograms per liter
---: Not established

J: Analyte detected below quantitation limits

Notes:

- Based on the new SPDES criteria from an NYSDEC letter dated on May 11, 2006, the new allowable pH range for the Rowe Site is between 5.0 and 8.5.
- The pH was measured with a new calibrated electronic pH meter. Influent pH values from recovery wells typically range between 5 and 6.
- "Effluent" samples were collected from sample port labelled NP2-10 unless otherwise noted.

NM: Not Measured
TDS: Total dissolved solids
PCE: Tetrachloroethylene
TCE: Trichloroethylene

1,1-DCA: 1,1-Dichloroethane
1,1-DCE: 1,1-Dichloroethene
1,2-DCE: 1,2-Dichloroethene

Note: B Method blank contamination. The associated method blank contains the target analyte at a reportable level.

PCE - Tetrachloroethane
TCE - Trichloroethane
TCA - 1,1,1-Trichloroethane
CE - Chloroethane
DCE - cis-1,2-Dichloroethane
TC - Chloroethane
CT - Carbon Tetrachloride

DCE - 1-Chloroethane
CF - Chloroform
DCA - 1,1-Dichloroethane
MC - Methylene Chloride
CM - Chloromethane
CD - Carbon Disulfide

VC - Vinyl Chloride
BM - Bromomethane
CB - Chlorobenzene
EB - Ethylbenzene
CD - Carbon Disulfide

RE: Rowe

Order No.: 0802098

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 2/7/2008 for the analyses presented in the following report.

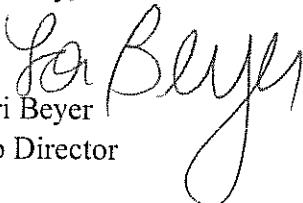

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value.
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of the method allowable holding time.

RE: Rowe

Order No.: 0802198

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 2/15/2008 for the analyses presented in the following report.

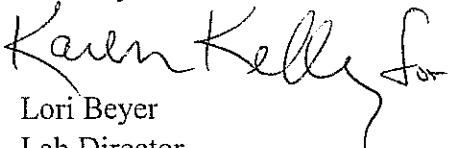

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value.
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of the method allowable holding time.

RE: Rowe

Order No.: 0802306

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 2/26/2008 for the analyses presented in the following report.

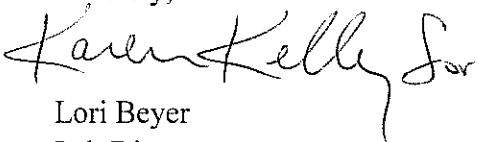

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value.
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of the method allowable holding time.

RE: Rowe

Order No.: 0803013

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 3/4/2008 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value.
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of the method allowable holding time.

RE: Rowe

Order No.: 0802197

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 7 sample(s) on 2/15/2008 for the analyses presented in the following report.

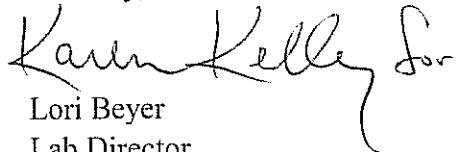

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value.
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of the method allowable holding time.

ANALYTICAL METHODS SUMMARY

H8B150117

<u>PARAMETER</u>	<u>ANALYTICAL METHOD</u>
Volatile Organics by TO15	EPA-2 TO-15

References:

EPA-2 "Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air", EPA-625/R-96/010b, January 1999.

SAMPLE SUMMARY

H8B150117

<u>WO #</u>	<u>SAMPLE#</u>	<u>CLIENT SAMPLE ID</u>	<u>SAMPLED DATE</u>	<u>SAMP TIME</u>
KG5HV	001	AQ021308:1100NP4-1	02/13/08	11:00
KG5HX	002	AQ021308:1105NP4-2	02/13/08	11:05
KG5H0	003	AQ021308:1110NP4-3	02/13/08	11:10

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

**PROJECT NARRATIVE
H8B150117**

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation is included with this report.

Sample Receipt

There were no problems with the condition of the samples received.

Quality Control and Data Interpretation

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

The samples were received on 02/15/08 in Tedlar bags and transferred into Summa Canisters within 72 hours of sampling.

TestAmerica Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. #05-043-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906, Hawaii DOH, Illinois EPA Cert. #000687, Indiana DOH Cert. #C-TN-02, Iowa DNR Cert. #375, Kansas DHE Cert. #E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Ohio EPA VAP Cert. #CL0059, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-00576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. # QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, West Virginia DEP Cert. #345, Wisconsin DNR Lab ID #998044300, Naval Facilities Engineering Service Center and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

Client Sample ID: AQ021308:1100NP4-1

GC/MS Volatiles

Lot-Sample # H8B150117 - 001

Work Order # KG5HV1AA

Matrix.....: AIR

Qualifiers

- B Method blank contamination. The associated method blank contains the target analyte at a reportable level.
J Estimated result. Result is less than RL.

The 'Result' in ug/m³ is calculated using the following equation: Amount Found(before rounding)*(Molecular Weight/24.45)

The 'Reporting Limit' in ug/m³ is calculated using the following equation: (Reporting
Limit(before rounding) * Dilution Factor) * (Molecular Weight/24.45)
