**Subject: March 2003 Ground-Water Sampling Program Results
 Active Industrial Uniform
 Lindenhurst, New York
 LAW Project Number 22000-0-0019**

Dear Mr. Soliman:

Law Engineering and Environmental Services, P.C. (LAW), a MACTEC Company, is pleased to present this Quarterly Ground-Water Monitoring Report for the Active Industrial Uniform (AIU) site in Lindenhurst, New York. This report summarizes ground-water conditions for the March 2003 monitoring event.

This report provides a summary of background information, methodologies used during the ground-water sampling, results, and conclusions.

BACKGROUND INFORMATION

The ground-water remediation system at the AIU site is designed to recover and treat ground water impacted with volatile organic compounds (VOCs). The system design is consistent with the remedy stated in the Final Design Contract Documents (Contract Documents) from the New York State Department of Environmental Conservation (NYSDEC) dated March 2000 for the site.

The ground-water remediation system utilizes two recovery wells (wells RW-1 and RW-2) to extract ground water from the subsurface. Recovery well RW-1 is located on-site and well RW-2 is located off-site. Eleven ground-water monitoring wells were installed for monitoring ground-water quality conditions. Eight monitoring wells are located on-site (designated as MW-101 through MW-108) and three monitoring wells are located off-site (designated as MW-109 through MW-111) and downgradient of the site. The discharge pipe for the recovery wells was trenched from the wells to the treatment

building. The recovered ground water is treated by an automated air stripping system located in the on-site treatment building. The ground-water treatment system has a design capacity of 250-gallons per minute (gpm) flow rate. The off-gases from the air stripper are treated with vapor phase carbon and discharged to the atmosphere under an air discharge permit equivalency. The treated ground-water is discharged under a State Pollution Discharge Elimination System (SPDES) permit equivalency. Results of samples for vapors and ground-water discharged are as separate reports.

METHODOLOGY

Ground-Water Sampling

On March 4th, 2003 ground-water samples were collected from the eight on-site monitoring wells, and three off-site monitoring wells. A site layout is shown on Figure 1. Prior to sampling, ground-water levels were measured in the wells using an electronic water-level measuring device. Depth to ground-water measurements ranged from 1.55 feet below top of casing (TOC) to 7.19 feet below TOC. Ground-water measurements and elevations are shown in Table 1.

Each well was purged of approximately three well volumes using a peristaltic pump prior to sampling. Purged water was discharged to the ground surface on-site as directed by State oversight personnel (Environmental Resources Management). After the wells were purged, ground-water samples were collected using a new, disposable Teflon bailer for each well. The following field parameters were measured in the field as the well was purged and recorded on the water sampling logs: pH; specific conductivity; and temperature.

Ground-water samples collected from the 11 wells were analyzed for VOCs using United States Environmental Protection Agency (USEPA) Method 8260B. Samples were submitted to Environmental Testing Laboratories, Inc. (ETL), under proper chain of custody documentation. In addition, a duplicate sample, as well as a field blank and a trip blank were submitted to the laboratory for analysis for QA/QC purposes. Table 2 summarizes the results of the VOCs analyses. Copies of the laboratory analytical reports are provided in Appendix A. Copies of ground-water sampling logs are provided in Appendix B.

SUMMARY OF RESULTS

Ground-Water Flow

Figure 2 is a map depicting the configuration of the water table (potentiometric surface) that was prepared using the ground-water elevation data provided in Table 1. As shown on Figure 2, the horizontal component of ground-water flow is in a south-southwesterly direction, which is consistent with the direction of the ground-water flow mapped during previous events.

Ground-Water Sampling

Analytical results of ground-water samples collected during the March 4, 2003 sampling event indicate that VOCs are present in on-site and off-site monitoring wells. Concentrations of total VOCs reported in the on-site monitoring wells ranged from 2.89 to 1,061.1 micrograms per liter (ug/L) (replicate of well MW-106). As shown in Table 2, vinyl chloride, trans-1,2-dichloroethene, cis-1,2-dichlorothene, trichloroethene, tetrachloroethene, n-propylbenzene, 1,2,4-trimethylbenzene, and 1,2,4,5-tetramethylbenzene were detected at concentrations above NYSDEC ground-water standards. Wells MW-103, MW-104, MW-105, MW-106, and MW-107 had one or more VOCs reported at concentrations above NYSDEC ground-water quality standards. Wells MW-106 and MW-104 had the highest concentrations of total VOCs located on-site (1,024.83 ug/L [replicate 1,061.1] and 308.89 ug/L, respectively). The VOC detected at the highest concentration in well MW-106 was cis-1,2-dichloroethene (888 ug/L; replicate sample 927). The VOC detected at the highest concentration in well MW-104 was tetrachloroethene (299 ug/L). Vinyl chloride (34.8 ug/L), trans-1,2-dichloroethene (6.53 ug/L), trichloroethene (52.3 ug/L), and tetrachloroethene (43.2 ug/L) were also reported at concentrations above NYSDEC ground-water quality standards in MW-106. Similarly, vinyl chloride (33.6 ug/L), trichloroethene (53.4 ug/L), and tetrachloroethene (47.1 ug/L) were detected in the replicate sample (MW-116). In addition to tetrachloroethene in MW-104, trichloroethene (6.96 ug/L) was also reported at a concentration above the NYSDEC ground-water quality standard. No VOCs were reported at concentrations above NYSDEC ground-water quality standards in on-site wells MW-101, MW-102 and MW-108.

The concentrations of total VOCs detected in off-site monitoring wells MW-109, MW-110, and MW-111, were 4.05 ug/L, 244.1 ug/L, and 109 ug/L, respectively (Table 2). Wells MW-110 and MW-111 had VOCs reported at concentrations at or above NYSDEC ground-water quality standards. Methyl t-butyl

ether, and cis-1,2-dichloroethene were detected at or above NYSDEC ground-water standards (Table 2) in these wells.

CONCLUSIONS

- The horizontal component of ground-water flow at the AIU site is in a south-southwesterly direction.
- The highest levels of total VOCs were reported in monitoring wells MW-106 (1,024.83 ug/L), MW-104 (308.89 ug/L), and MW-110 (244.1 ug/L) (Table 2).
- The VOCs reported at the highest concentrations above NYSDEC ground-water quality standards were cis-1,2-dichloroethene, tetrachloroethene, methyl t-butyl ether, and trichloroethene.
- Off-site monitoring wells MW-110 and MW-111 had one VOC reported at concentrations at or above NYSDEC ground-water quality standards.
- Quarterly sampling will continue during operation of the ground-water remediation system.

CLOSING

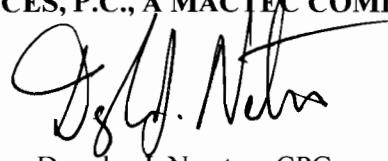

We appreciate the opportunity to assist Blue Water Environmental with this project. If you have any questions or need additional information, please do not hesitate to call us.

Sincerely,

LAW ENGINEERING AND ENVIRONMENTAL SERVICES, P.C., A MACTEC COMPANY

Case Narrative

EPA 8260:

The following compounds were calibrated at 25, 50, 100,
150 and 200 ppb levels in the initial calibration curve:

Acetone
2-Butanone
4-Methyl-2-pentanone
2-Hexanone

M&P-Xylenes and 2-Chloro ethyl vinyl ether were calibrated at 10, 40, 100, 200 and
300 ppb levels.

All other compounds were calibrated at 5, 20, 50,
100 and 150 ppb levels.

Patricia Werner-Els

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

U - The analytical result is a non-detect.

J - Indicates an estimated value. The concentration reported was detected below the Method Detection Limit.

B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

E - The concentration of the analyte exceeded the calibration range of the instrument.

D - This flag identifies all compounds identified in an analysis at a secondary dilution. In the case of a surrogate this flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL).

U - Entered when the analyte was analyzed for, but not detected.

Q - Qualifier specific entries and their meanings are as follows:

E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

A - Flame AA

AS - Semi-automated Spectrophotometric

AV - Automated Cold Vapor AA

C - Manual Spectrophotometric

F - Furnace AA

P - ICP

T - Titrimetric

OTHER QUALIFIERS

ND - Not Detected

NA - Not Applicable

NR - Not Required

* - Outside Expected Range (NYCDEP Table I/II or Surrogate Limits)

OTHER

- All soil and sediment samples are reported on a dry weight basis.

Weather:	Sunny	Coded Replicate No.:			

Instrument Identification

Water Quality Meter(s): Handheld U-V

Serial #:

Purging Information

Casing Material:	PVC	Purge Method:	Peristaltic
Casing Diameter:	2	Screen Interval (ft bmp):	
Total Depth (ft bmp):	14.50	Pump Intake Depth (ft bmp):	
Depth to Water (ft bmp):	7.19	Purge time Start:	1041

Field Parameter Measurements Taken During Purging

Time	Minutes Elapsed	Rate (mL/min)	Volume Purged	Temp (°C)	pH (SI Units)	Conductivity (mS/cm)	REDOX (mV)	DO (mg/L)	Water Table (ft bmp)	Turb	Comments
1044				9.6	6.60	424		3.08		39	
1046				9.6	6.54	406		2.16		0	
1048		4	9.6	6.51	395			1.94		0	
1050											
1055				8.6	6.67	383		4.70		138	

Sample Condition Color: clear Odor: none Appearance: non-turbid

Sample Collection Container: 40 ml glass No. 2 Preservative: HCl

Parameter: VOC
