Albany, New York 12233

**RE: National Heatset Printing
Operation & Maintenance Report, August 2004
1 Adams Boulevard
Farmingdale, New York
NYSDEC Site 1-52-140**

Dear Mr. Dyber:

This letter provides an overview of the ongoing operation of the soil vapor extraction (SVE) system for the National Heatset Printing Site in Farmingdale, New York (**Figure 1**) for the reporting period including August 2004. A site visit was performed by Shaw Environmental and Infrastructure Engineering of New York, P.C. (Shaw) in accordance with our contract with the New York State Department of Environmental Conservation (NYSDEC).

System Operation

Operation of SVE system began on September 17, 2002. The SVE system was operational for approximately 43% of the reporting period. The SVE blower was shut down on August 12, 2004 due to the observation of an abnormal motor sound and odor upon restarting the SVE blower after a carbon change out. On August 17, 2004, the SVE blower was removed from the site and transported to K&G Power Systems in Hauppauge, New York for inspection. K&G Power Systems personnel determined that several blower parts were in need of maintenance or replacement. The maintenance activities will be performed upon receipt of replacement parts from the blower manufacturer and the SVE blower will be transported back to the site and

reinstalled as soon as possible upon completion of the maintenance activities. The system operational data collected to date is summarized in **Table 1**.

No water was collected from the knockout vessel during this reporting period. A small quantity of water has been collected during the previous reporting periods and placed in an accumulation drum for storage until the drum has been filled, at which time proper characterization and disposal procedures will be followed.

Monitoring Probes

Monitoring of the vapor monitoring points was not performed during the site visit, but will resume during future site visits.

PCE Removal

The SVE system has removed approximately 7 pounds of PCE during this reporting period and approximately 2,479 pounds of PCE to date. A summary of the estimated PCE mass removal over time is presented in **Table 2**.

Air Discharge Monitoring

Shaw personnel did not collect a sample of the system effluent air for laboratory analyses during the site visit. Sampling of the system effluent air stream will resume during future site visits. Air sample analytical results to date are presented in **Table 3** and a summary of field monitoring and laboratory air discharge monitoring results to date is presented as **Table 4**.

Carbon Change Out/Waste Removal

A carbon change out was performed on August 12, 2004 due to detectable VOC concentrations observed from the vapor-phase granular activated carbon (VGAC) effluent sample port during the July 28, 2004 site visit. Two thousand pounds of VGAC were removed from the carbon vessels and transported from the site to Envirotrol, Inc. for regeneration. The spent VGAC was replaced with fresh VGAC.

Conclusions and Recommendations

Shaw recommends continued operation of the SVE system at 1 Adams Boulevard. As site conditions change, adjustments will be made to optimize the system operation. The system is currently idle, but will be restarted as soon as possible upon the completion of maintenance that is being performed on the SVE blower.

Please do not hesitate to contact me at 518-783-1996 with any questions you might have regarding this report.

Sincerely,
Shaw E&I Engineering of New York, P.C.

Notes:

- PID = Total VOC concentration measured with photoionization detector
- ppm = parts per million (volume/volume basis)
- PCE = Tetrachloroethene (PCE) concentration measured with Drager tube of 10-500 ppm range
- scfm = standard cubic feet per minute
- cfm = cubic feet per minute
- Influent SVE = Readings collected between the SVE Blower and the Carbon Units
- Mid GAC = Readings collected between the lead and lag carbon units
- Effluent GAC = Readings collected after the lag carbon unit
- GAC = granular activated carbon unit
- = measurement not recorded

Discharge Rate (Field Monitoring, lb/hr) = [(flow(cfm)*influent conc.(ppmv)*MW*12.187)/(273.15+C)]*1 cu. m./35.31 cu. ft*1g/1000 mg*1 lb/453.6 g*60 min/1 hr

Discharge (Field Monitoring, lb) = Discharge Rate (lb/hr) * # of days*24hours/day*60 minutes/hr

Discharge Rate (Lab Results, lb/hr) = flow (cfm)*effluent conc. (mg/cu. m.)*1g/1000mg*1lb/453.6g*1cu. m./35.31cu. ft*60min/1 hr

Discharge (Lab Results, lb) = Discharge Rate (lb/hr) * # of days*24hours/day

Where:

MW = molecular weight

Molecular weight (MW) of PCE is 165.85, Molecular weight (MW) of TCE is 131.4, Molecular weight of cis-1,2-DCE is 96.94

C = degrees centigrade, assumed to be 25

cfm = cubic feet per minute

mg/cu. m = milligrams per cubic meter

ppmv = parts per million (volume/volume basis)

lb = pounds

hr = hours

J = Estimated Value

Permit Limit		
	lb/hr	lb/yr
PCE	0.031	270
TCE	0.014	120
cis-1,2-DCE	0.63	5,510

SITE VISIT DOCUMENTATION

National Heatset Printing

1 Adams Boulevard, Farmingdale, New York

Shaw Environmental, Inc. Job/Task Number 802901/06010000

Personnel: R. Hyde
 Weather: Sunny

Time: 1300
 Date: 8-12-04

System Status:

Arrival: 0830
 Departure: _____
 Run Timer Reading: 13969.21
 Electric Meter Reading: 9470

System Data:

	<u>Pre VGAC Change</u>	<u>Post VGAC Change</u>
Extraction Well F Gate Valve:	<u>90</u> % Open	<u>90</u>
Dilution Valve:	<u>25</u> % Open	<u>25</u>

Pre-Bleed Air (Extraction Well):

Post Change

Flow:	CFM	<u>157</u>
Vacuum:	"H2O	<u>58</u>
PID Reading:	PPM	<u>48</u>
Draeger Tube:	PPM	<u>0</u>
Temperature:	°F	<u>87</u>

Post-Bleed Air (SVE Influent):

Post Change

Flow:	CFM	<u>104</u>
Vacuum:	"H2O	<u>74</u>
PID Reading:	PPM	<u>302</u>
Draeger Tube:	PPM	<u>200</u>
Temperature:	°F	<u>135°</u>

Carbon Monitoring:

Mid:	PPM	<u>2.2</u>	CFM	<u>180</u>	Temp. (°F)	<u>98</u>	PPM (Drager)	<u>0</u>
Effluent:	PPM	<u>0.1</u>	CFM	<u>187</u>	Temp. (°F)	<u>91</u>	PPM (Drager)	<u>0</u>

Carbon effluent sample collected & shipped to lab? NO

Knockout Tank Drained? _____
 # Gallons: _____
 Purge water drums on-site: _____

Monitoring Well Gauging / Vapor Point Monitoring:

Well/V.P. ID:	MW-C	MW-E	MW-F	MW-G	VP-1	VP-2	VP-3	VP-4	VP-5	VP-6
DTW (ft):								-	-	-
Vac. (" H2O):	-	-	-	-				-	-	-

Comments:

SYSTEM DOWN upon Arrival. Performed Carbon Change
Before RESTART only one SET OF Readings.

While performing SYSTEM monitoring. Notice MOTOR sounding Abnormal & The odor Electricity heat. Attempted to check AMPS & MOTOR & noticed SMOKE coming FROM THE FAN AREA UNIT WAS ON only in 45 min shut DOWN & called TO John TO Inform OF SITUATION. OFF loaded DRUMS FROM Service Tech. I'm waiting FOR Antuan TO arrive.
