Re: **LP-19 and LP-4 Leaching Pool Remediation Summary**
1735 Express Drive North
Hauppauge, New York
FPM File No. 894-06-01

Dear Peter:

FPM Group (FPM) has performed remediation and abandonment of leaching pool LP-4 and abandonment of leaching pool LP-19 at the above-referenced facility. Approval for the abandonment of these leaching pools was provided by the Suffolk County Department of Health Services (SCDHS) as per your December 14, 2006 letter to FPM. The procedures and results are documented herein. The attached Figure 1 shows the facility layout and locations of the leaching pools.

The SCDHS was notified prior to the start of remediation work and a SCDHS representative was periodically onsite to witness portions of the work. Remediation and abandonment of leaching pool LP-4 was conducted on November 17, 2007. Abandonment and replacement of leaching pool LP-19 was conducted in June and July 2008.

LP-4 Procedures and Results

Waste characterization samples were obtained for sediments to be removed from LP-4 and were analyzed prior to remediation. The laboratory results were submitted to the selected waste disposal facility (Soil Safe, Inc.) for waste disposal approval. Based on the laboratory results, the sediments designated for removal were approved for disposal as non-hazardous waste.

The piping connecting leaching pool LP-4 to leaching pool LP-3 was removed and its point of exit from LP-3 was sealed with grout. The dome covering LP-4 was removed and it was confirmed that no additional piping was associated with the leaching pool.

Remediation of leaching pool LP-4 was performed by installing precast concrete diffusion well rings around the leaching pool to maintain a shored cylindrical excavation with a width of 12 feet. A crane was utilized to remove impacted soil within LP-4 while the exterior shoring was continually installed. Soil was excavated to a total depth of 40 feet below grade. A total of 298.10 tons of soil was removed and temporarily stockpiled on poly sheeting at the designated area on the northwest portion of the facility. The stockpile was also covered with poly sheeting. The excavation was then backfilled with clean sand to near grade. The surface area was finished by installing recycled concrete blend across the disturbed area to grade.

The stockpiled soil was subsequently disposed offsite as non-hazardous waste. Copies of the waste disposal manifests are attached.

Based on this information, the remediation and abandonment of former leaching pool LP-4 have been completed in accordance with the SCDHS-approved scope of work. No further action is recommended for the former LP-4.

LP-19 Procedures and Results

A new 8-foot diameter by 15-foot deep leaching pool was installed to replace leaching pool LP-19. The new leaching pool is identified on the attached Figure 1 as LP-19R. Piping to leaching pool LP-19 was disconnected and re-routed to LP-19R. Following disconnection, leaching pool LP-19 was abandoned by backfilling the pool with soil excavated during the installation of the new leaching pool LP-19R, along with additional clean fill material.

Based on this information, all discharges to former leaching pool LP-19 have been terminated and the pool is confirmed to be inoperative in accordance with the SCDHS-approved scope of work. No further action is recommended for the former LP-19.

Summary and Conclusions

An evaluation of the site's leaching pools, storage tanks, and septic tanks was conducted by FPM in 2006. Remediation of select leaching pools and septic tanks was performed between 2006 and 2008 under direction of the SCDHS. With the exception of leaching pools LP-4 and LP-19, the SCDHS previously indicated that no further work is required for any other leaching pools or septic tanks at the facility. This report documents the completion of remedial work for LP-4 and LP-19. Therefore, the remediation and abandonment work for the facility leaching systems required by the SCDHS has been completed.

As per SCDHS requirements, one groundwater monitoring well (MW-1) was installed in January 2008 immediately downgradient of the former leaching pool LP-4 location to evaluate groundwater conditions. Quarterly groundwater monitoring at well MW-1 has been coordinated with Ms. Geralynn Rosser of the SCDHS and is ongoing. The groundwater evaluation is being handled as a separate issue; quarterly reports are regularly submitted to Ms. Rosser for her review.

Please confirm that the SCDHS concurs with the above-described conclusions and has no further requirements for the facility leaching pools at this time. If you have any questions, please contact us at 737-6200.

Very truly yours,

John S. Bukoski
