FACT SHEET

Manufactured Gas Plant Program

Consolidated Edison

**York Ave. Station MGP Site
York Ave.
New York, NY 10065**

SITE No. 231117

NYSDEC REGION 2

March 2021

Remedy Proposed for Former Manufactured Gas Plant Site; Public Comment Period Announced

The public is invited to comment on a remedy being proposed by the New York State Department of Environmental Conservation (NYSDEC) in consultation with the New York State Department of Health (NYSDOH) to address contamination related to the York Avenue Station site ("site") located at York Avenue between 61st and 63rd Streets, New York, New York County. Please see the map for the site location.

How to Comment: NYSDEC is accepting written comments about the proposed plan, called a Proposed Decision Document (DD) for 45 days, from March 25, 2021 through May 8, 2021.

- Access the DD and other project documents online through the DECinfo Locator: <https://www.dec.ny.gov/data/DecDocs/231117/>.
- Documents also are available at the location(s) identified at left under "Where to Find Information."
- Please submit comments to the NYSDEC project manager listed under Project-Related Questions in the "Who to Contact" area at left.

The site is the subject of an Order on Consent between Consolidated Edison Company of New York, Inc. and the New York State Department of Environmental Conservation (NYSDEC).

The remedy proposed for the site includes:

- Maintaining the existing site cover which consists of buildings, asphalt, and concrete sidewalks;
- An environmental easement will be placed on a portion of the site, which will allow the use and development of the controlled property for restricted residential, commercial and industrial uses (consistent with current zoning laws), and restrict the use of groundwater as a source of potable or process water; and
- A site management plan will be established, which will detail the requirements for cover system inspection and maintenance, and future excavations. This plan will also require that, when a parcel(s) that comprises the site becomes accessible, the responsible party will conduct additional investigation, and, if required based on investigative findings, development of a remedial work plan for that parcel.

MANUFACTURED GAS PLANT PROGRAM

NYSDEC developed the proposed remedy after reviewing the remedial investigation of the site submitted under New York's Manufactured Gas Plant Program by Consolidated Edison ("remedial party").

Next Steps: NYSDEC will consider public comments as it finalizes the remedy for the site. The selected remedy will be described in a document called a Decision Document that will explain why the remedy was selected and respond to public comments.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Site Description: The former York Avenue Station site is located on the west side of York Avenue, from East 61st to East 63rd Street, and on a portion of a parcel on the east side of York Avenue, between East 63rd and East 62nd Streets, in the Borough of Manhattan in New York City. The site was a former manufactured gas storage site; no gas manufacturing processes were conducted here. The site was operational between 1874 and 1948, at which time the structures were removed. Between 1949 and 1960 the parcels were redeveloped into the current residential and commercial uses. Investigations performed to date at the site have found both volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) in the subsurface soils and groundwater that exceed their respective soil cleanup objectives (SCOs) and groundwater standards.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, 231117) at:

<https://www.dec.ny.gov/cfm/xtapps/dereexternal/index.cfm?pageid=3>

MGP Program Overview: New York's MGP Program oversees the investigation and cleanup of former MGP sites. Sites where contamination has been released to the environment go through a process of investigation, evaluation, cleanup and monitoring.

The gas manufacturing process involved the heating of coal and/or petroleum products to produce a gas mixture. Once cooled and purified, the gas was distributed through a local pipeline network. The gas was used for heating and cooking much like natural gas is used today. In the early years, the gas was also used for lighting in homes and in streetlights.

NYSDEC attempts to identify parties responsible for site contamination and require cleanup before committing State funds.
