Re: NOW Corporation - Site #3-14-008
Monthly Summary Report – “April” 2007

Dear Mr. Hoffman:

Enclosed is a monthly summary report on the operation, monitoring and maintenance (OM&M) of the remedial system at the NOW Corporation site in the Town of Clinton, New York. This report describes the OM&M of the groundwater pump-and-treat (P&T) system for a 27-day period (**March 13, 2007 through April 9, 2007**), and presents the results of the most recent annual groundwater sampling event.

With the exceptions noted below (if any), the P&T system was online and operational throughout the reporting period. Approximately 856,500 gallons of water were treated during the period. Discharge from the treatment system averaged approximately 31,700 gallons per day (gpd). During the prior reporting period, the average discharge was 17,800 gpd.

As of the last day of the reporting period, a total of 57,370,100 gallons of groundwater had been recovered and treated by the system since it became operational in February 1998.

Table 1 summarizes influent and effluent analytical data for water samples collected on April 9, 2007. **There were no exceedances of effluent limitations.** Table 2 summarizes selected operational data recorded on the last day of the reporting period. Table 3 presents water level measurements that were made on April 24, 2007. Table 4 presents groundwater analytical results from a monitoring well sampling event conducted on that date. A copy of the two laboratory data reports is included in this report.

Earth Tech made one site visit during the reporting period to conduct the required system inspection, perform scheduled and/or unscheduled maintenance, and to collect water samples and water levels. One visit was made after the reporting period to perform groundwater sampling. The March 13th service visit was described in the previous report. Details for the month of April follow:

April 9th - Monthly system inspection, and influent/effluent sampling. Cleaned flow meter for TW-2A. The pump discharge cannot be increased and may need to be cleaned. Effluent totalizing flow meter was not working. This was dismantled and cleaned. In addition, the effluent pump was dismantled and put in a muriatic acid bath to clean. An inventory of the barrels on site was performed.

April 24th – Monitoring well sampling conducted for 15 site wells.

Historical and “current” groundwater analytical results from 15 monitoring wells are presented in Table 4. Monitoring well locations are shown on Figure 1. Five wells remain impacted at levels exceeding state groundwater standards (MW-1, 6S, 6D, 7S and 7D). Total VOCs at MW-1 have declined from 114 ppb in August 2005 to 97.3 ppb in April 2007. VOC concentrations observed in MW-6S have continued to decrease from 77 ppb in October 2005 to 27.4 ppb in April 2007. MW-6D continued to show relative stability of VOC concentrations. Total VOC concentrations in MW-7S and MW-7D have continued to decline but they remain the most contaminated monitoring wells at the Site. They have 104 ppb and 118.7 ppb total VOCs respectively in the April 2007 sampling event. In most impacted wells, TCE is the dominant contaminant. MTBE was not detected in any monitoring well in the April 2007 sampling event. Outlying

Page 2
Mr. Carl Hoffman
NYSDEC

monitoring wells remain unimpacted either because they are located in an upgradient direction from the former source area, or they are positioned beyond the radius of influence of the groundwater extraction wells.

Please feel free to contact me at (518) 951-2262 if you have any questions regarding this report or the operation of the treatment system.

Sincerely,
Earth Tech Northeast

Stephen R. Choiniere
Project Manager

Notes:

- 1) Detected concentrations are presented in **bold** typeface, and are expressed in the units shown in far right column.
- 2) Effluent concentration boxed in **bold** denotes exceedance of effluent limitations.
- 3) NA indicates not analyzed.
- 4) "J" indicates an estimated concentration below the method detection limit.
- 5) "D" denotes analytical result for a diluted sample.
- 6) Tabulated results for VOCs correct suspected mixup of samples TW-2A and Total Influent; the attached lab report shows the opposite results.

Notes:

- 1) Positive results are **inbold** (ppbv).
- 2) ND = Not Detected
- 3) *N/A* = Not Analyzed (either well was effectively dry on date shown, or indicated analyte was not reported)
- 4) * = Duplicate sample result.
- 5) MW-6S, 7S & 7D were dry on 8/25/05. They were sampled on the date shown at the top of the columns.
- 6) D = denotes analytical result for a diluted sample.

**INFLUENT & EFFLUENT WATER
ANALYTICAL REPORT**

Client: Earth Tech

Client Project: NOW Corp, 94017.02, 03/07

Lab Work Order: F0443

Date samples received: 04/10/07

Project Narrative

This data report includes the analysis results for six (6) aqueous samples that were received from Earth Tech on April 10, 2007. Analyses were performed per specification in the Chain of Custody form. For reference, a copy of the Mitkem Sample Log-In form is included for cross-referencing the client sample ID and laboratory sample ID.

Surrogate recoveries were within the QC limits for volatile organic analyses. Percent recoveries in laboratory control samples were within the QC limits. Due to elevated concentrations of target analytes, the following samples were analyzed at dilution: INF 4/07 (25X), TW-1 (5X) and TW-2A (25X).

Spike recoveries were within the QC limits in the laboratory control samples for oil & grease, metals, total dissolved solids, total suspended solids and cyanide analyses. Matrix spike analyses was performed for cyanide and duplicate analyses were performed for cyanide, total dissolved solids and total suspended solids on sample INF 4/07. Percent recoveries and replicate RPDs were within the QC limits.

No other unusual occurrences were noted during sample analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

This data report has been reviewed and is authorized for release as evidenced by the signature below.

A handwritten signature in black ink, appearing to read "Edward A. Lawler".

**GROUNDWATER
ANALYTICAL REPORT**

Client: Earth Tech

Client Project: NOW Corp, 94017.02, 04/07

Lab Work Order: F0513

Date samples received: 04/25/07

Project Narrative

This data report includes the analysis results for seventeen (17) aqueous samples that were received from Earth Tech on April 25, 2007. Analyses were performed per specification in the Chain of Custody form. For reference, a copy of the Mitkem Sample Log-In form is included for cross-referencing the client sample ID and laboratory sample ID.

Surrogate recoveries were within the QC limits for volatile organic analyses. Percent recoveries in laboratory control samples were within the QC limits. Due to elevated concentrations of target analytes, the following samples were analyzed at dilution: MW-1 (4X), MW-7S (8X) and MW-7D (8X).

No other unusual occurrences were noted during sample analysis.

All pages in this report have been numbered consecutively, starting with the title page and ending with a page saying only "Last Page of Data Report".

This data report has been reviewed and is authorized for release as evidenced by the signature below.

A handwritten signature in cursive ink that reads "Edward A. Lawler".
