Automobile Club of New York
GCE Project No. 05-003-00
Monthly/Quarterly Soil Vapor Extraction System Performance-Cover System Monitoring
& Quarterly Air Sampling Report

Dear Mr. Starr:

As you aware, Automobile Club of New York (AAA) (Now Known as AAA Northeast) entered into an Order on Consent (Index No. D3-0504-06-09) with the New York State Department of Environmental Conservation (NYSDEC) in December, 2006. Based on the submitted and approved August 2015 SVE System Design Work Plan, April 2015 Site Management Plan, October 2015 Construction Completion Report and November 2013 Site Characterization Report, the monthly and quarterly reports prepared by G. C. Environmental, Inc. (GCE) for the Subject Site are listed as follows:

Monthly Reports (January-February);

- Soil Vapor Extraction System Performance
- Cover System Monitoring

March Monthly Inspection was not performed.

Quarterly Reports (April);

- Soil Vapor Extraction System Performance
- Cover System Monitoring
- Air Sampling

If you have any questions concerning this project, please feel free to call me at (631) 206 3700, ext. 111.

Very truly yours,

A handwritten signature in black ink.

Gregory A. Collins
President

SVE System Design, Site Code Number 360095
Soil Vapor Extraction (SVE) System Performance & Cover System Monitoring Report
January 2019

SVE System Performance Overview

In January 16, 2019, the SVE system was found to be operating at a flow rate of 50 CFM. Vacuum measurements at the manifold were consistent, ranging from 50-52 inches wc. Vacuum measurements at the system blower show that the blower produces 34-50 inches wc. The SVE System was operational throughout the month of January with no water accumulation in the SVE system's knock out (KO) drum. Air filter on the CFM gauge was inspected for moisture. No water accumulation was observed.

System Inspections

The SVE system operated continuously and routine inspections of the system are conducted by GCE personnel. System Operational Inspection logs are in place and are maintained. The concentrations of VOC (via photoionization detector (PID)) were measured on all soil vapor extraction points (SVE-1 & SVE-2 & SP-1 & SP-2). The PID readings were identified as 0.00 ppm at each point.

Cover System Inspections

The cover system routine inspection of the system is conducted by GCE personnel. The building slab and pavement act as a site cover for residual contaminated soils that exceed soil clean up objectives for the site use. The cover system at the soil vapor extraction wells (SVEs) location was not breached, penetrated or temporarily removed, and any underlying remaining contamination was not disturbed during the system inspection. However, during the system inspection, in some areas within the building footprint, which were not identified as the source of the contamination in soil vapor, cracks were observed. These are the same areas were identified during previous inspection.

Sincerely,

Fulya Toyular
Environmental Scientist

SVE System Design, Site Code Number 360095
Soil Vapor Extraction (SVE) System Performance & Cover System Monitoring Report
February 2019

SVE System Performance Overview

In February 26, 2019, the SVE system was found to be operating at a flow rate of 50 CFM. Vacuum measurements at the manifold were consistent, ranging from 52-54 inches wc. The vacuum measurement at the system blower produces 52 inches wc. The vacuum measurement on the inlet of the blower was identified as 0.00. The SVE System was operational throughout the month of February with water accumulation in the SVE system's knock out (KO) drum. It was observed that half of the drum was full of frozen water at this month. Air filter on the CFM gauge was inspected for moisture. On February 28, 2019, the carbon drum has been replaced.

System Inspections

The SVE system operated continuously and routine inspections of the system are conducted by GCE personnel. System Operational Inspection logs are in place and are maintained. The concentrations of VOC (via photoionization detector (PID)) were measured on all soil vapor extraction points (SVE-1 & SVE-2 & SP-1 & SP-2). The PID readings were identified as 0.00 ppm at each point.

Cover System Inspections

The cover system routine inspection of the system is conducted by GCE personnel. The building slab and pavement act as a site cover for residual contaminated soils that exceed soil clean up objectives for the site use. The cover system at the soil vapor extraction wells (SVEs) location was not breached, penetrated or temporarily removed, and any underlying remaining contamination was not disturbed during the system inspection.

Sincerely,

Fulya Toylular
Environmental Scientist

SVE System Design, Site Code Number 360095
Soil Vapor Extraction (SVE) System Performance & Cover System Monitoring Report &
Air Sampling Report - April 2019

On February 28, 2019, the carbon drum has been replaced and during February monthly inspection it was discovered that the water inside the moisture knock out drum was frosted and the gauge on the blower was not working properly. On March 13, 2019, GCE was at the Site to defrost and remove water in the knock out drum, and replace the gauge on the blower.

Due to present issues with the system and to be able to get more efficient results, the quarterly inspection includes air sampling was postponed to the month of April. No inspection was performed in March.

SVE System Performance Overview

In April 18, 2019, the SVE system was found to be operating at a consistent flow rate of approximately 50 CFM. Vacuum measurements at the manifold were consistent, ranging from 50-52 inches wc. Vacuum measurements at the system blower show that the blower produces 54 inches wc. The SVE System was operational throughout the month of April with one quarter of drum was accumulated in the system's knock out (KO) drum. Air filter on the CFM gauge was inspected for moisture. No moisture was observed.

Air Sampling Procedures

According to the Soil Vapor Sampling Program attached to the August 2015 SVE System Design Work Plan Report, air samples were collected at four (4) locations in the SVE system: at the discharge of the GAC vessel (SP-2) when the SVE system was running and at the SVE system blower discharge (SP-1), SVE wells (SV-1 and SV-2) at the repair shop area when the SVE system was shutdown. The air samples were collected using SUMMA canisters over an elapsed time of 1 hour. The air samples were boxed and shipped to the Phoenix Environmental Laboratories (PEL), a New York State ELAP-approved laboratory for analysis of VOC using EPA Method TO-15. PID readings were 0.00 ppm at all sampling locations (Please, refer to the lab results in Appendix A and Table 1 for air sample results and Figure 1 for air sampling diagram).

Air Sampling Data Interpretation

Air samples were collected in April 18, 2019. In December at an average flow rate of approximately 50 cfm (approximately 72,000 cub.ft/day), the SVE system was estimated to be removing approximately 0.1 lbs of total VOC per day (Please refer to the lab results in Appendix A and Table 1 for air sample results).

Air Sampling PID Measurements

According to the August 2015 SVE System Design Work Plan Report and April 2015 Site Management Report (SMP) concentrations of VOC (via photoionization detector (PID)) should

be measured on all soil vapor extraction points (SVE-1 & SVE-2). The PID readings had been measured on these points and all sampling locations (Please refer to Table 2 for the PID Readings at all air sampling locations, April, 2019).

System Inspections

The SVE system operated as described and routine inspections of the system are conducted by GCE personnel. System Operational Inspection logs are in place and are maintained.

Cover System Inspections

The cover system routine inspection of the system is conducted by GCE personnel. The building slab and pavement act as a site cover for residual contaminated soils that exceed soil clean up objectives for the site use. The cover system was not breached, penetrated or temporarily removed, and any underlying remaining contamination was not disturbed during the system inspection. Nevertheless, during the system inspection, in some areas within the building footprint, which were not identified as the source of the contamination in soil vapor, cracks were observed.

Groundwater Level Measurements

On April 18, 2019, GCE conducted groundwater level measurements in all the on-site monitoring wells. Depth to groundwater was measured using a Solinst oil/water interface probe equipped with a fiberglass measuring tape. The same probe and measuring tape were used for all measurements. All of the groundwater level measurements were taken from an etch mark at the top of the PVC casing of each well (Please refer to Table 3 for the Groundwater Depth Measurements, Figure 2 for the Site Map).

Groundwater Sampling Procedures

Based on the work plan and site management plan, no groundwater samples were collected at this time.

Groundwater PID Measurements

According to the August 2015 SVE System Design Work Plan (SVE) and April 2015 Site Management Report (SMP) concentrations of VOC (via photoionization detector (PID)) should be measured on all on-site monitoring wells MW-1 through MW-8. The PID readings had been measured at all monitoring wells (Please refer to Table 4 for the PID Readings).

Sincerely,

Fulya Toyular
Environmental Scientist

APPENDIX A

Lab Analytical Results

Monday, April 22, 2019

Attn: Mr. Greg Collins
G.C. Environmental, Inc.
22 Oak Street
Bayshore, NY 11706

Project ID: D5-003-00
SDG ID: GCC98099
Sample ID#s: CC98099 - CC98102

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Phyllis Shiller

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

The canister was received under no vacuum, therefore sample results may not be representative.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sample Criteria Exceedances Report

GCC98099 - GC-ENV

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units
*** No Data to Display ***								

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
