

GENEVA BORDER CITY MGP SITE

SITE SUMMARY

9/28/01

Previous site investigations have resulted in the production of three site investigation reports (Tasks 1 through 3), a risk assessment report (Task 4), and two letter reports (Summary of Indoor Air Quality Investigations and Exposure Assessment, dated August 16, 1988, and Focused Environmental Investigation, dated April 28, 1993). Prior to these more formal investigations, three smaller investigations were conducted and summarized in three separate letter reports (May 18, 1984, August 18, 1984, and November 6, 1984). The investigation work and resulting documents were completed at NYSEG's direction and without the benefit of involvement by the New York State Department of Environmental Conservation (DEC).

In 1994, NYSEG signed an Order on Consent with the DEC for the investigation and, if necessary, remediation of 33 former manufactured gas plant (MGP) sites. The Geneva Border City MGP site is one of those sites. As such, all future work will be conducted with oversight and approval by the DEC.

NYSEG and the DEC have identified some data gaps from the previously conducted work which will require additional investigation of the site and surrounding areas. The work will take place in the form of a supplemental remedial investigation (SRI). The SRI is scheduled to occur in the late spring and early summer of 2002. Prior to implementation of the work, a draft work plan for the project will be placed into the document repositories¹. NYSEG and the DEC will conduct a public meeting(s) to discuss the project with the community and make sure the interests of all stakeholders are adequately addressed. Subsequent to the public meeting(s) that work plan will be finalized and the work will proceed. It's expected that a final SRI report will be available in the repositories for public review by late in 2002.
