Buffalo, NY 14203-2999

**Re: Monthly Operation and Maintenance Report  
NYSDEC Site 9-15-066, Cheektowaga, New York**

Dear Mr. Murray:

On behalf of the Respondents to the Order on Consent and Settlement Agreement (Index No. B9-0381-91-8) (the “Order”), CBS Corporation (CBS) submits this monthly report on the status of operation and maintenance (O&M) activities at New York State Department of Environmental Conservation (NYSDEC) Site No. 9-15-066 in Cheektowaga, New York (the “Site”). Under an Agreement among the Respondents, CBS is managing the Remedial Program defined in the Order. This report covers activities during the period of June 1 through June 30, 2009 and transmits the discharge monitoring report for this period.

**1. Site Activities and Status**

- A. On June 8, 2009, CBS submitted to NYSDEC a monthly report on the status of both routine and non-routine O&M activities at the Site for the May 2009 operating period. That status report also transmitted the discharge monitoring data for May 2009.
- B. The recovery and treatment system operated throughout the June 2009 reporting period.
- C. Conestoga-Rovers & Associates (CRA) conducted routine O&M on behalf of CBS, and Severn Trent Laboratories, Inc. provided analytical laboratory services.
- D. CRA collected the quarterly groundwater sample from well MW-32.

## 2. Sampling Results and Other Site Data

- A. In June 2009, the groundwater system recovered and treated an estimated 331,000 gallons.<sup>1</sup>
- B. Attachment A provides the discharge monitoring report for June 2009 based on effluent sample collected on June 12, 2009. Attachment B includes the analytical laboratory report for the effluent sample collected on June 12, 2009.
- C. In reviewing the treatment system effluent monitoring information, please note the following:
  - The flow data are provided via on-site readings. The maximum daily flow was calculated from these data.
  - The pH data are provided via on-site readings and laboratory analysis of the monthly effluent sample. pH data are reported only for measurements taken while the treatment pump is operating and the system is actively discharging.
  - The reported daily maximum values (pounds per day) are calculated using the maximum observed daily flow and the results of the monthly effluent monitoring, irrespective of whether the actual maximum daily flow occurred on the day of sampling.
- D. For the June 2009 reporting period, the effluent complied with all discharge limitations.
- E. Table 1 presents the results of influent sampling data, including the most recent influent sample collected on June 12, 2009. Attachment B includes the analytical laboratory report for this influent sample.

## 3. Upcoming Activities

- A. CBS will continue required O&M activities.
- B. CBS plans to implement the shutdown of the portion of the groundwater collection system that drains to Sump 001, pursuant to prior correspondence and approvals of NYSDEC. CBS is currently working with the Niagara Frontier Transportation Authority to schedule the work within the restricted area of the Buffalo Niagara International Airport.

---

<sup>1</sup> Based on additional information and recalculation, the estimated total discharge for May 2009 has been revised to 154,000 gallons from the 160,000 gallons as indicated in the May 2009 monthly status report.

William P. Murray, P.E.

July 6, 2009

Page 3

#### 4. Operational Problems

- A. Previously reported operational problems associated with elevated pH, hardness, and inflow continue. These operational problems are expected to be largely resolved with the phased shutdown of the collection and treatment system and limitation of inflows to those associated with Sump 003.
- B. As previously observed by and described to NYSDEC, the water levels in Sumps 001 and 002 have risen to the point where the water overtops these manholes during period of high precipitation. This situation will be remedied through closure of these portions of the groundwater collection system.

\* \* \* \*

We trust this submittal satisfies your requirements at this time. If you have questions regarding this status report, please contact me.

Respectfully submitted,

Leo M. Brausch  
Consultant/Project Engineer

## NELAC REPORTING:

At the time of analysis the laboratory was in compliance with the current NELAC standards and held accreditation for all analyses performed unless noted by a qualifier. The labs accreditation numbers are listed below. The format and contents of the report meets all applicable NELAC standards except as noted in the narrative and shall not be reproduced except in full, without the written approval of the laboratory. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	TestAmerica
NFESC	NA	NAVY	X

		HW	X
Wisconsin	998027800	WW	X
		HW	X

The codes utilized for program types are described below:

- HW Hazardous Waste certification
- WW Non-potable Water and/or Wastewater certification
- X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

## CASE NARRATIVE

**Leo Brausch Consulting**

Lot # C9F140107

### **Sample Receiving:**

TestAmerica's Pittsburgh laboratory received samples on June 13, 2009. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

### **GC/MS Volatiles:**

TestAmerica's North Canton performed the 624 analysis.

Due to the concentration of target compounds detected, sample IFF0609 was analyzed at a dilution.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "J" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "B" qualifier.

The matrix spike recovered outside QC limits for 2-chloroethyl vinyl ether and trichlorofluoromethane.

### **Metals:**

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

### **General Chemistry:**

The test for pH is a field parameter. The laboratory pH analysis was completed at the request of the client.
