270 Michigan Avenue  
Buffalo, NY 14203-2999

**Re: Monthly Operation and Maintenance Report  
NYSDEC Site 9-15-066, Cheektowaga, New York**

Dear Mr. Locey:

On behalf of the Respondents to the Order on Consent and Settlement Agreement, Index No. B9-0381-91-8 (the "Order"), CBS Corporation (CBS) submits this monthly status report for operation and maintenance (O&M) activities at New York State Department of Environmental Conservation (NYSDEC) Site No. 9-15-066 in Cheektowaga, New York (the "Site"). Under an Agreement among the Respondents, CBS is managing the Remedial Program pursuant to the Order. This report covers activities during February 2011 and transmits the discharge monitoring report for this period.

**1. Site Activities and Status**

- A. On February 6, 2011, CBS submitted to NYSDEC a monthly report on the status of O&M activities at the Site for January 2011. That status report also transmitted the discharge monitoring data for January 2011.
- B. The recovery and treatment system operated throughout February 2011.
- C. Conestoga-Rovers & Associates (CRA) conducted routine and non-routine O&M, and TestAmerica Laboratories, Inc. provided analytical laboratory services, as required.

## **2. Sampling Results and Other Site Data**

- A. In February 2011, the groundwater system recovered and treated an estimated 109,000 gallons.
- B. Attachment A provides the discharge monitoring report for February 2011 based on the effluent sample collected on February 16, 2011. Attachment B provides the analytical laboratory report for this effluent sample.
- C. In reviewing the treatment system effluent monitoring information, please note the following:
  - Flow data are provided via periodic on-site readings. The maximum daily flow was calculated from these data.
  - The pH data are provided via periodic on-site readings and laboratory analysis of the monthly effluent sample. Effluent pH data are reported only for measurements taken while the treatment pump is operating and the system is actively discharging.
  - The reported daily maximum values (pounds per day) are calculated using the maximum observed daily flow and the results of the monthly effluent monitoring, irrespective of whether the actual maximum daily flow occurred on the day of sampling.
- D. For the February 2011 reporting period, the effluent complied with all discharge limitations.

## **3. Upcoming Activities**

- A. CBS will continue required O&M activities.
- B. With NYSDEC approval, CBS will complete the Phase 1 closure of the 002 system by filling and sealing manholes MH-002-09 and MH-002-10.
- C. After closing MH-002-09, and MH-002-10, CRA will conduct additional water level measurements, surface water monitoring, and groundwater monitoring per the *Revised Work Plan* (Rev. 1, February 7, 2008).

## **4. Operational Problems**

- A. Previously reported operational problems associated with elevated pH and hardness continue. These operational problems are expected to be largely

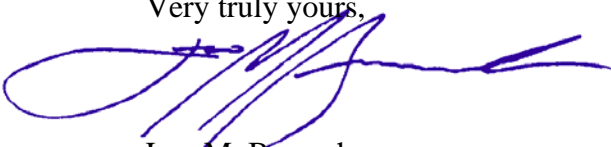

resolved with the phased shutdown of the collection system and limitation of inflows to those associated with Sump 003.

- B. The post-closure monitoring data indicate that the Phase 1 closure of the 001 groundwater collection system has addressed the previously observed high water levels at Sump 001, which had led to periodic overtopping of that manhole. The ongoing periodic overtopping at Sump 002 will be addressed through the partial closure of that portion of the groundwater collection system.
- C. The Phase 1 closure of the 002 system is also expected to reduce the conveyance of groundwater containing VOCs via storm sewers installed by the Niagara Frontier Transportation Authority as part of airport development.
- D. Other operational issues are being addressed in the course of O&M activities.

\* \* \* \*

Please contact me if you have questions regarding this status report.

Very truly yours,

Leo M. Brausch  
Consultant/Project Engineer

## NELAC REPORTING:

At the time of analysis the laboratory was in compliance with the current NELAC standards and held accreditation for all analyses performed unless noted by a qualifier. The labs accreditation numbers are listed below. The format and contents of the report meets all applicable NELAC standards except as noted in the narrative and shall not be reproduced except in full, without the written approval of the laboratory. The table below presents a summary of the certifications held by TestAmerica Pittsburgh. Our primary accreditation authority for the Non-potable water and Solid & Hazardous waste programs is Pennsylvania DEP. A more detailed parameter list is available upon request. Please ask your project manager for this information when required.

Certifying State/Program	Certificate #	Program Types	TestAmerica
DoD ELAP	ADE-1442	WW	X
US Dept of Agriculture	(#P330-10-00139)	HW	X
Arkansas	(#88-0690)	Foreign Soil Import Permit	X
California – NELAC	04224CA	WW	X
Connecticut	(#PH-0688)	HW	X
Florida – NELAC	(#E871008)	WW	X
Illinois – NELAC	(#002319)	HW	X
Kansas – NELAC	(#E-10350)	WW	X
Louisiana – NELAC	(#04041)	HW	X
New Hampshire – NELAC	(#203010)	WW	X
New Jersey – NELAC	(PA-005)	--	--
New York – NELAC	(#11182)	WW	X
North Carolina	(#434)	HW	X
Pennsylvania - NELAC	(#02-00416)	WW	X
South Carolina	(#89014002)	HW	X
Utah – NELAC	(STLP)	WW	X
West Virginia	(#142)	HW	X
Wisconsin	998027800	WW	X
		HW	X

The codes utilized for program types are described below:

HW Hazardous Waste certification  
 WW Non-potable Water and/or Wastewater certification  
 X Laboratory has some form of certification under the specific program. Many states certify laboratories for specific parameters or tests within a category. The information in the table indicates the lab is certified in a general category of testing. Please contact the laboratory if parameter specific certification information is required.

## CASE NARRATIVE

### Leo Brausch Consulting

Lot # C1B170481

#### **Sample Receiving:**

TestAmerica's Pittsburgh laboratory received one sample on February 17, 2011. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report, when batch QC was completed on these samples, anomalous results will be discussed below.

#### **GC/MS Volatiles (624):**

TestAmerica's North Canton laboratory performed the 624 analysis.

The method blank had methylene chloride detected at a concentration between the MDL and the reporting limit. The result was flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

#### **Metals:**

There were no problems associated with the analysis.

#### **General Chemistry:**

The test for pH is a field parameter. The laboratory pH analysis was completed at the request of the client.

# METHODS SUMMARY

C1B170481

<u>PARAMETER</u>	<u>ANALYTICAL METHOD</u>	<u>PREPARATION METHOD</u>
pH (Electrometric)	SM20 4500-H+B	SM20 4500-H B
