Re: Mr. C's Dry Cleaners Site, Contract # D003493-27.5, Site # 9-15-157
September 2005 Operations, Maintenance, and Monitoring Report

Dear Mr. Chiusano:

Ecology and Environment Engineering, P.C. (EEEPC) is pleased to provide this September 2005 Operation, Maintenance, and Monitoring (OM&M) Report for the Mr. C's Dry Cleaners Site, NYSDEC Site # 9-15-157, located in East Aurora, New York. Copies of weekly inspection reports from EEEPC's subcontractor O&M Enterprises, Inc. (OMEI) are provided as Attachment A. Selected pages from the individual analytical data packages prepared by Severn - Trent Laboratories (STL) are provided as Attachment B. All analytical results for the report were analyzed at the lowest detection limits in accordance with the method standard. Remedial treatment system utility costs are provided as Attachment C. Discussion of the subslab depressurization systems at the First Presbyterian Church of East Aurora and 27 Whaley are provided in the operational summary of the report.

In review of the on-site treatment system operations, monitoring and maintenance for September 2005, EEEPC offers the following comments and highlights:

Operational Summary

- The treatment system was operational for approximately 100% of the period between 8/29/05 and 10/3/05. Table 1 is provided to indicate the monthly operational time of the treatment equipment from the time of system startup.
- The effluent totalizer readings for the month of September 2005 indicate that approximately 1,591,248 gallons of groundwater were processed through the treatment system from 8/29/05 through 10/3/05. This is a 10.25% increase in treated volume over the month of August 2005. Table 2 provides a summary of groundwater volume treated since system start-up. Historical volumes are based on totalizer readings provided by the O&M subcontractor's weekly inspection forms.
- Filters in the influent bag filter unit were replaced during weekly inspection on 9/19/05.

- Checklists for weekly system inspections from OMEI are provided as Attachment A for 9/6/05, 9/12/05, 9/19/05, 9/27/05 and 10/3/05. Weekly system checks indicated that the air stripper differential pressure was between 23 and 26 inches of water during the month of September 2005. Maintaining the differential pressure of the stripper trays between 17 and 30 inches of water is critical for treated effluent to be in compliance with the discharge criteria.
- The feed rate for the sequestering agent increased slightly to 3.0mg/L.
- All groundwater pumping wells were inspected. Residual water was pumped out and transported as placed in the system equalization tank. Manholes were then inspected for leaks and equipment operation. All manholes were found without leaks and operations equipment performing correctly.
- The flexible ductwork from the blower to the stripper tray broken during restart was repaired and the unit placed back into service.
- A copy of the site utility costs from EEEPC operations from October 2004 to date is provided as Attachment C.
- The October compliance sampling is planned to take place on October 6, 2005.
- The sampling of the monitoring wells at the Agway site was performed on September 6 and 7, 2005. Analytical results were received September 30, 2005. EEEPC to prepare letter report of results.
- EEEPC received a telephone call from Kim Bingman (716-913-1232) EA 400 Main Street LLC, holding company and current owner of the Agway property. They requested overflow parking at the site. EEEPC responded that a final round of sampling was being performed and a final determination on release of environmental conditions will be performed by NYSDEC. Our response to NYSDEC will be to install additional protection around treatment systems, groundwater pumping wells, piezometers and junction boxes to allow weekly access and to prevent damage from snow plowing in the future. Treatment equipment protection to be installed in October 2005.
- The operations and maintenance review of the subslab depressurization system for the Presbyterian Church indicates that the system is achieving the anticipated goals of the installation. Minor issues noted during the facility system review in August 2005 have been addressed:
 - caulking in Room 114 at the wall penetration from the classroom to the bathroom is checked and missing on both the classroom and bathroom walls and is scheduled for repair in October.
 - corrective action was performed on the roof leader/downspout assembly, which was reconnected to the existing building perimeter underdrain. EEEPC will discuss with Bill Larson later in October if action corrected the situation.
- The operations and maintenance review of the subslab depressurization system for 27 Whaley is complete and the system is operational. No additional service work or repairs are planned at this time. The next inspection of the system is scheduled for March 2006.
- All electrical junction boxes were cleaned and inspected. No changes were required.
- All force main manholes were inspected along Whaley Avenue. All manholes were filled with water. Water was pumped out and transported back into the equalization tank at the Mr. C's treatment building for processing. Manholes were inspected for leaks and operational equipment. Residual leakage was coming from surface into manhole.

Mr. Dave Chiusano, Project Manager

October 7, 2005

Page 3 of 3

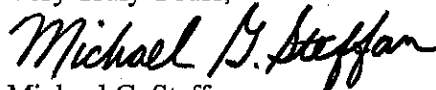

- All force main manholes were inspected along Whaley Avenue. All manholes were filled with water. Water was pumped out and transported back into the equalization tank at the Mr. C's treatment building for processing. Manholes were inspected for leaks and operational equipment. Residual leakage was coming from surface into manhole.
- The Agway/Matrix system remains in operation since start up in April 2005. OMEI continues to review the system operations on a weekly basis. All air sparge points continue to be functional except for one point in the north area of the field. No repairs are anticipated at the present time.
- EEEPC purged and sampled the onsite wells on the Agway property on September 6 and 7, 2005 to evaluate the specific remedial cleanup. The analysis has been received and a letter will be developed for submission in early October 2005.

Analytical Summary – Groundwater

- EEEPC and OMEI personnel collected samples of influent and effluent groundwater for the reporting period 8/29/05 to 10/03/05 on September 6, 2005 as part of the normal weekly O&M services. The analytical results for the September 2005 sampling events are presented in Table 3.
- The September 2005 analytical results indicate that the treated groundwater effluent was below the site specific Effluent Discharge Limitation Requirements for all compounds including PCE. A comparison between the September 2005 analytical results and the Effluent Discharge Limitation Requirements for the site are provided in Table 4. The treatment system remains in operational and regulatory compliance during the month of September 2005.
- Approximately 16.5 pounds of VOCs were removed from the influent groundwater based on calculations using the effluent discharge analytical results during the reporting period. A summary of the calculated pounds of VOC's by month and by date are located in Table 5. These values are calculated based on effluent totalizer readings and assumes that non-detect values given in the analytical data package = 0 µg/L and that the monthly samples are indicative of the influent characteristics and system performance for the entire reporting period.

If you have any questions regarding the September 2005 O&M report summary submitted, please call me a 716-684-8060.

Very Truly Yours,

Michael G. Steffan

Project Manager

| Lead | 11 | µg/L | NA |
| Manganese | 2,000 | µg/L | NA |
| Silver | 100 | µg/L | NA |
| Vanadium | 28 | µg/L | NA |
| Zinc | 230 | µg/L | NA |
| Total Dissolved Solids | 850 | mg/L | NA |
| Total Suspended Solids | 20 | mg/L | NA |
| Hardness | N/A | mg/l | 550 |
| Cyanide, Free | 10 | µg/L | NA |

NOTES:

1. "Daily Maximum" excerpted from Attachment E of Addendum 1 to the Construction Contract Documents.
2. Analytical report did not differentiate between o-Xylene and m, p-Xylene. Total Xylene value reported is given in each line.
3. Shaded cells indicate that analytical value exceeds the "Daily Maximum"
4. "ND" indicates that the compound was not detected and lists the practical quantitation limit in parentheses.
5. "NA" indicates that analyses were not performed and data is unavailable.
6. Average flows based on effluent readings taken August 29, 2005 through September 3, 2005. Total gallons 1,591,248 divided by 36 operating days.
7. "J" indicates an estimated value.
8. "B" indicates analyte found in the associated blank.
9. Detection limits noted on the specific analytes of concern.

 Indicates non-compliance with the effluent discharge requirements

| June 2005 ⁹ | 6/6/05 - 7/6/05 | 1126 | 12 | 8.16 |
| July 2005 ⁹ | 7/6/05 - 8/1/05 | 1575 | 5.90 | 16.80 |
| August 2005 ⁹ | 8/1/05 - 8/29/05 | 1359 | 51.26 | 15.70 |
| September 2005 ⁹ | 8/29/05 - 10/3/05 | 1239 | 0.47 | 16.50 |
| Total pounds of VOCs removed from inception = | | | | 944.54 |

NOTES:

- Calculations are based on monthly water samples and assumes samples are representative of the entire reporting period.
- Calculations assume that non-detect values = 0 ug/L.
- Total VOCs summations include estimated "J" values.
- Calculations are based on effluent totalizer readings.
- "Influent VOCs" and "Effluent VOCs" values given above is the summation of values for individual compounds given in monthly analytical reports.
- No samples were collected in September 2003. August 2003 values are used.
- Treatment system operated by Tyree Organization, Ltd. from 9/02 to 9/03.
- Treatment system operated by O&M Enterprises from 10/03 to present.
- Average influent and effluent concentrations used for December 2004.

CONVERSIONS:

1 pound = 453.5924 grams
1 gallon = 3.785 liters

Pounds of VOCs removed calculated by the following formula:
(1239 ug/L - 0.47 ug/L) * (1 g / 10⁶ ug) * (1 lb / 453.5924 g) * 1,591,248 gallons * (3.785 L/gallon) ~ 16.5 lbs

where 1,591,248 gallons is the monthly process water volume.

Describe any other system maintenance performed _____

Changed filters. Repaired flexible duct work from blower to stripper tray, it broke after I restarted the blower. I had system turned off to check the stripper trays for scale or mineral deposits, I found iron sludge on the bottom tray all other trays were clean. I plan to pressure the trays next week (Sept. 26, 2005).
I opened and checked all of the manholes and electrical boxes, the electrical boxes were clean and dry. The manholes all had water - RW-1 water level ~ 4" below force main the pressure gauge appears OK looking at it from the surface. PW-2 and PW-3 manhole had water at the force main level, pressure unknown. PW-4 and PW-5 water level ~1" below force main pressure gauges OK. PW-6 and PW-7 water level at the bottom of the force main pipe pressure gauges OK. PW-8 water level ~ 1 " below force main pipe pressure gauge OK.
Acrossed the street I attached the rain downspout to the existing drain.

NON-CONFORMANCE SUMMARY

Job#: A05-9644STL Project#: NY5A9393.3Site Name: Ecology and Environment NYSDEC StandbyGeneral Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A05-9644

Sample Cooler(s) were received at the following temperature(s); 5.2 °C
All samples were received in good condition.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Dilution Log w/Code Information
For Job A05-9644

6/25 Page: 1
Rept: AN1266R

| <u>Client Sample ID</u> | <u>Lab Sample ID</u> | <u>Parameter (Inorganic)/Method (Organic)</u> | <u>Dilution</u> | <u>Code</u> |
|-------------------------|----------------------|---|-----------------|-------------|
| Influent | A5964402 | 8260 | 20.00 | 008 |

Dilution Code Definition:

- 002 - sample matrix effects
- 003 - excessive foaming
- 004 - high levels of non-target compounds
- 005 - sample matrix resulted in method non-compliance for an Internal Standard
- 006 - sample matrix resulted in method non-compliance for Surrogate
- 007 - nature of the TCLP matrix
- 008 - high concentration of target analyte(s)
- 009 - sample turbidity
- 010 - sample color
- 011 - insufficient volume for lower dilution
- 012 - sample viscosity
- 013 - other

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

- ND or U Indicates compound was analyzed for, but not detected.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
- C This flag applies to pesticide results where the identification has been confirmed by GC/MS.
- B This flag is used when the analyte is found in the associated blank, as well as in the sample.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- D This flag identifies all compounds identified in an analysis at the secondary dilution factor.
- N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
- P This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
- A This flag indicates that a TIC is a suspected aldol-condensation product.
- 1 Indicates coelution.
- * Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

- ND or U Indicates element was analyzed for, but not detected. Report with the detection limit value.
- J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
- N Indicates spike sample recovery is not within the quality control limits.
- S Indicates value determined by the Method of Standard Addition.
- E Indicates a value estimated or not reported due to the presence of interferences.
- H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
- * Indicates the spike or duplicate analysis is not within the quality control limits.
- + Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

| August-05 | 696 | 696 | 100.00% | 44% | Extremely dry month of August. |
| September-05 | 664 | 864 | 100.00% | 40% | Extremely dry month of September. |
| Totals to Date | 17328 | 16673 | 96.22% | | Based on OM services provided by EEEPC/OMEI since 9/03. |

* Percent Capacity is based on initial operating groundwater flows from the eight installed pumps from 9/02. Evaluated on total gallons discharged for monthly operating time

Maximum pump discharges calculated as an average of 78 gpm as the total for all 8 pumps at the site if all pumps operate 100%.

With the exception of groundwater pump RW-1 all other pumps run a batch basis

Projected Utility Costs for the O&M year (11/04 to 11/05)

| | Ave./Month |
