Re: Mr. C's Dry Cleaners Site, Contract # D004442-DC02, Site # 9-15-157
November 2006 Operations, Maintenance, and Monitoring Report

Dear Mr. Welling:

Ecology and Environment Engineering, P.C. (EEEPC) is pleased to provide the November 2006 Operation, Maintenance, and Monitoring (OM&M) Report for the Mr. C's Dry Cleaners Site, NYSDEC Site # 9-15-157, located in East Aurora, New York. Copies of weekly inspection reports provided from EEEPC's subcontractor O&M Enterprises, Inc. (OMEI) are provided in Attachment A. Selected pages from the individual analytical data packages prepared by Severn - Trent Laboratories (STL) is provided as Attachment B and C. The full analytical report along with QA/QC information will be retained by EEEPC. All analytical results for the report were analyzed at the lowest detection limits in accordance with the standard method. Remedial treatment system utility costs for the Mr. C's and Agway sites are provided as Attachment D.

In review of the on-site treatment system operations, monitoring and maintenance for November 2006, EEEPC offers the following comments and highlights:

Operational Summary

Mr. C's Site – Remedial Operations Information

- The treatment system was operational for 100% of the period between 10/30/06 and 11/27/06. Table 1 is provided to indicate the monthly operational time of the treatment equipment from the time of system startup.
- The effluent totalizer readings for the month of November 2006 indicate that approximately 903,959 gallons of groundwater were processed through the treatment system for the period 10/30/06 and 11/27/06. Table 2 provides a summary of groundwater volume treated since system start-up. Historical volumes are based on totalizer readings provided by the O&M subcontractor's weekly inspection forms.
- Filters in the influent bag filter unit were replaced during weekly inspections on 11/6/06, 11/13/06, 11/20/06, and 11/27/06.

Mr. William Welling PE, Project Manager

December 8, 2006

Page 2 of 3

- Checklists for weekly system inspections from OMEI are provided as Attachment A for 10/30/06, 11/6/06, 11/13/06, 11/20/06 and 11/27/06. Weekly system checks indicated that the air stripper differential pressure remained constant between 3 – 4 inches of water with air stripper pressure at 17.5-19 inches of water during the month of November 2006.
- The feed rate for the sequestering agent continues to be at 3.0 ml/min based on reduced inflow requirements to the system and visual observation of mineral deposits on the stripping trays.
- Contact stripper trays were pressure washed of mineral deposits on October 30, and November 27, 2006.
- The analytical results from compliance sampling on November 5, 2006 (Attachment B) were received by EEEPC on November 28, 2006. In review of the data, PCE effluent was noted to be 15 ppb which is over the discharge limit of 10 ppb for the site. The NYSDEC project manager was immediately called to discuss corrective actions to be performed by EEEPC and O&M to return the remedial treatment system back to permit compliance. Inspection of the system was performed on November 28, 2006, stripper trays were inspected and found to be clean, differential pressure on the stripper trays were found to be slightly elevated, and the magnahelic gauge for the damper on the blower also indicated a slight change in volume had occurred. The damper was reset another round of influent/effluent samples were taken the same day. The analytical results were received on 11/30/06. The PCE effluent results were found to be 2.5 ppb with no other analytes above the permit requirements. The second set of analytical data is provided in Attachment C.
- Future corrective action to be taken in December 2006 by O&M Maintenance will be the full teardown, inspection and cleaning of the contact air stripper. December 2006 compliance sampling will be performed at the beginning of the month, but additional sampling will be performed for system review after the stripper is returned to service.

Agway Site Remedial Information

- OMEI continues to review the system operations on a weekly basis.
- OMEI provided drilling costs regarding the Agway air sparge points to EEEPC on September 25, 2006. Installation of new air sparge points and removal of the existing blocked points is expected to cost approximately \$5,000 plus the addition of the transportation and disposal of the decommissioned air sparge point casings and drill cuttings. Drilling and AS point re-installation is under discussions and acceptance with the NYSDEC project manager.

Mr. C's and Agway Energy Usage information

- A copy of the site utility costs from the Mr. C's and Agway remedial operations from December 2004 to November 2006 are provided as Attachment D.

December 8, 2006

Page 3 of 3

Analytical Summary – Groundwater

- EEEPC and OMEI personnel collected samples of influent and effluent groundwater for the reporting period 10/30/06 to 11/27/06 on November 5, 2006 as part of the weekly O&M services. The second set of samples taken on November 28, 2006 will be used for system calculations. Overall cleanup efficiency for the November 2006 reporting period was 99.11%. The summary of analytical results for the November 5, and 28, 2006 sampling events are presented in Table 3.
- The November 2006 monthly analytical results indicate that the treated groundwater effluent returned to below the site specific Effluent Discharge Limitation Requirements for all compounds. Table 4.
- Approximately 8.61 pounds of VOCs were removed from the influent groundwater based on calculations using the effluent discharge analytical results during the reporting period. A summary of the calculated pounds of VOC's by month and by date are located in Table 5. These values are calculated based on effluent totalizer readings and assumes that non-detect values given in the analytical data package = 0 $\mu\text{g}/\text{L}$ and that the monthly samples are indicative of the influent characteristics and system performance for the entire reporting period.

If you have any questions regarding the November 2006 O&M report summary submitted, please call me a 716-684-8060.

Very Truly Yours,
Ecology and Environment Engineering, P. C.

NOTES:

- "Daily Maximum" excerpted from Attachment E of Addendum 1 to the Construction Contract Documents.
- Analytical report did not differentiate between o-Xylene and m, p-Xylene. Total Xylene value reported is given in each line.
- Shaded cells indicate that analytical value exceeds the "Daily Maximum"
- "ND" indicates that the compound was not detected and lists the practical quantitation limit in parentheses.
- "NA" indicates that analyses were not performed and data is unavailable.
- Average flows based on effluent readings taken October 30, 2006 through November 27, 2006. Total gallons: 903,959 divided by 28 operating days.
- "J" indicates an estimated value below the detection limit.
- "B" indicates analytic found in the associated blank.
- Removed from the required analysis list by NYSDEC Region 9 in February 2005.

Total pounds of VOCs removed from inception to August 2005 =

928.04

Table 5
Mr. C's Dry Cleaners Site Remediation
Site #9-15-157
Monthly VOCs Removed From Groundwater

Month	Actual Period	Influent VOCs ($\mu\text{g}/\text{L}$)	Effluent VOCs ($\mu\text{g}/\text{L}$)	VOCs Removed (lbs.)
Total pounds of VOCs removed from inception to August 2005 =				928.04
September 2005 ⁹	8/29/05 - 10/3/05	1239	0.47	16.50
October 2005 ⁹	10/3/05 - 10/31/05	1454	0.81	14.60
November 2005 ⁹	10/31/05 - 11/28/05	2266	6.80	8.61
December 2005	11/28/05 - 1/3/06	1166	1.30	11.50
January 2006	1/3/06 - 2/6/06	1679	11.87	13.62
February 2006	2/6/06 - 3/6/06	1465	90.20	16.56
March 2006	3/6/06 - 4/4/06	1475	2.00	22.43
April 2006	4/4/06 - 5/1/06	1465	8.80	13.56
May 2006	5/1/06 - 5/30/06	1263	0.00	11.07
June 2006	5/30/06 - 7/3/06	1994	1.40	18.17
July 2006	7/3/06 - 7/30/06	2010	1.40	13.64
August 2006	7/30/06 - 8/28/06	1296	8.60	9.24
September 2006	8/28/06 - 10/2/06	1384	2.90	12.77
October 2006	10/2/06 - 10/30/06	1262	3.90	8.56
November 2006	10/2/06 - 10/30/06	1152	10.30	8.61
Total pounds of VOCs removed since inception =				12748

NOTES:

1. Calculations are based on monthly water samples and assumes samples are representative of the entire reporting period.
2. Calculations assume that non-detect values = 0 $\mu\text{g}/\text{L}$.
3. Total VOCs summations include estimated "J" values.
4. Calculations are based on effluent totalizer readings.
5. "Influent VOCs" and "Effluent VOCs" values given above is the summation of values for individual compounds given in monthly analytical reports.
6. No samples were collected in September 2003. August 2003 values are used.
7. Treatment system operated by Tyree Organization, Ltd. from 9/02 to 9/03.
8. Treatment system operated by O&M Enterprises from 10/03 to present.

CONVERSIONS:

1 pound = 453.5924 grams

1 gallon = 3.785 liters

Based on the Analytical Results from November 28, 2006:

Pounds of VOCs removed calculated by the following formula:

$$(1152 \mu\text{g}/\text{L} - 10.3 \mu\text{g}/\text{L}) * (1 \text{ g}/10^6 \mu\text{g}) * (1 \text{ lb}/453.5924 \text{ g}) * 903,959 \text{ gallons} * (3.785 \text{ L/gallon}) \sim 8.61 \text{ lbs}$$

where 903,959 gallons is the monthly process water volume.

NON-COMFORMANCE SUMMARY

Job#: A06-D107STL Project#: NY5A9393.3Site Name: Ecology and Environment NYSDEC StandbyGeneral Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-D107

Sample Cooler(s) were received at the following temperature(s); 10.0 °C

Samples were received at a temperature of 10.0°C. However, as the samples were collected the same day, it was not possible for the samples to cool to 4°C prior to receipt. There is no impact on the data.

GC/MS Volatile Data

No deviations from protocol were encountered during the analytical procedures.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Date: 11/24/2006

Dilution Log w/Code Information
For Job A06-D107

6/22 Page: 1
Rept: AN1266R

<u>Client Sample ID</u>	<u>Lab Sample ID</u>	<u>Parameter (Inorganic)/Method (Organic)</u>	<u>Dilution</u>	<u>Code</u>
Effluent	A6D10701	Total Hardness	2.00	008
Influent	A6D10702	8260	20.00	008
Influent	A6D10702	Total Hardness	2.00	008

Dilution Code Definition:

- 002 - sample matrix effects
- 003 - excessive foaming
- 004 - high levels of non-target compounds
- 005 - sample matrix resulted in method non-compliance for an Internal Standard
- 006 - sample matrix resulted in method non-compliance for Surrogate
- 007 - nature of the TCLP matrix
- 008 - high concentration of target analyte(s)
- 009 - sample turbidity
- 010 - sample color
- 011 - insufficient volume for lower dilution
- 012 - sample viscosity
- 013 - other

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

- ND or U Indicates compound was analyzed for, but not detected.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
- C This flag applies to pesticide results where the identification has been confirmed by GC/MS.
- B This flag is used when the analyte is found in the associated blank, as well as in the sample.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- D This flag identifies all compounds identified in an analysis at the secondary dilution factor.
- N Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
- P This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
- A This flag indicates that a TIC is a suspected aldol-condensation product.
- 1 Indicates coelution.
- * Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

- ND or U Indicates element was analyzed for, but not detected. Report with the detection limit value.
- J or B Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
- N Indicates spike sample recovery is not within the quality control limits.
- S Indicates value determined by the Method of Standard Addition.
- E Indicates a value estimated or not reported due to the presence of interferences.
- H Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
- *
- + Indicates the spike or duplicate analysis is not within the quality control limits.
- Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.
