FACT SHEET

Brownfield Cleanup Program

2 Ingraham Street Site
2 Ingraham Street
East Williamsburg, NY 11206

SITE No. C224036
NYSDEC REGION 2

May 2023

NYSDEC Certifies Cleanup Requirements Achieved at Brownfield Site

The New York State Department of Environmental Conservation (NYSDEC) has determined that the cleanup requirements to address contamination related to the 2 Ingraham Street site ("site") located at 2 Ingraham Street, East Williamsburg, NY, under New York State's Brownfield Cleanup Program (BCP) have been or will be met. Please see the map for the site location.

The cleanup activities were performed by 74 Bogart LLC and Bogart Holdings LLC ("applicants") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). NYSDEC has approved a Final Engineering Report (FER) and issued a Certificate of Completion (COC) for the site.

- Access the FER, Notice of COC and other project documents online through the DECinfo Locator:
<https://www.dec.ny.gov/data/DecDocs/C224036/>.
- The documents also are available at the location(s) identified at left under "Where to Find Information."

Completion of the Project: The following activities have been completed to achieve the remedial action objectives:

- Demolition and off-site disposal of the former building, including impacted building materials.
- Excavation - Excavation and off-site disposal of 2,789 tons of concrete, 519 tons of hazardous soils, and 32,768 tons of contaminated soil exceeding the Restricted Residential Use soil cleanup objectives (RRUSCOs), the site-specific cleanup criteria. Clean fill was brought in to replace the excavated soil and to establish the design grades at the site.
- In-situ ("In-place") Solidification (ISS) - Solidification of metal-impacted soils to depths of up to twenty-five (25) feet below ground surface in the former metal plating drain area. The contaminated soil was mixed in-place together with a solidifying agent (Portland cement) and other binding agents using an excavator. This mixture of soil, cement, and binding agents will slow groundwater flow and inhibit the movement of contaminants.
- Site Cover System - Placement of a cover system, including a demarcation layer over areas without hardscape (buildings, asphalt, or concrete) to address contamination remaining above RRUSCOs.
- Development of a Site Management Plan (SMP) for long-term management of remaining contamination as required by the Environmental Easement, including plans for: (1) Institutional and Engineering Controls (IC/ECs); (2) monitoring; (3) operation and maintenance; and (4) reporting.

BROWNFIELD CLEANUP PROGRAM

- Recording of an Environmental Easement to control land use and prevent future exposure to any contamination remaining at the site.

Final Engineering Report Approved: NYSDEC has approved the FER, which:

- 1) Describes the cleanup activities completed.
- 2) Certifies that cleanup requirements have been or will be achieved for the site.
- 3) Describes any institutional/engineering controls to be used. An *institutional control* is a non-physical restriction on use of the site, such as a deed restriction, when contamination left over after the cleanup action makes the site suitable for some, but not all uses. An *engineering control* is a physical barrier or method to manage contamination such as a cap or vapor barrier.
- 4) Certifies that a site management plan for any engineering controls used at the site has been approved by NYSDEC.

The following institutional controls have been put in place on the site:

- Site Management Plan
- Groundwater Use Restriction
- Land Use Restriction
- Environmental Easement

The following engineering controls have been put in place on the site:

- Cover System
- In-situ Solidification Monolith
- Monitoring Wells

Next Steps: With its receipt of a COC, the applicants are eligible to redevelop the site. In addition, the applicants are eligible for tax credits to offset the costs of performing cleanup activities and for redevelopment of the site. A COC may be modified or revoked if, for example, there is a failure to comply with the terms of the order or agreement with NYSDEC.

Site Description: The site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, NY, and is identified as Block 3084, Lot 1 on the New York City Tax Map. The site is a rectangular parcel about 1.8 acres in size and is located on the city block bordered by Ingraham Street to the north, Morgan Avenue to the east, Harrison Place to the

south, and Bogart Street to the west. Historic operations conducted at the site resulted in contamination of the subsurface and/or groundwater with metals, semi-volatile organic compounds, and volatile organic compounds, which have been cleaned up under the Brownfield Cleanup Program.

The site is being redeveloped into a seven-story storage building and a parking lot.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C224036) at:

<https://www.dec.ny.gov/cfm/externalapps/derexternal/index.cfm?pageid=3>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business, or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the SCOs or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.
