1.0 EXECUTIVE SUMMARY

On July 11, 2003, Testwell Laboratories, Inc. (TLI) conducted the *Phase II Environmental Investigation* by performing *ground penetration radar (GPR) survey* and collecting and analyzing subsurface *Soil Samples*.

The site is approximately 2.4-acre property located at 5200 Kings highway, Brooklyn, New York 11234, and is within the boundaries of Kings County. The site was originally developed in 1960 to house a bowling alley and was converted to a car dealership in approximately 1969. The buildings and parking lots on the site are used for auto storage, repair, bodywork and delivery preparation. There are several non-functioning hydraulic vehicle lifts through the repair and service areas. There are also three (3) underground storage tanks located within and out side the building that may continue to be used for storage of hydraulic fluid, motor oil and waste oil.

On February 10, 2007 and March 31, 2007, TLI marked locations of twelve (12) soil borings by performing ground penetration radar (GPR) survey.

On March, 3, 10 & 31, 2007, TLI performed the actual sub surface soil investigation with the use of Geoprobe equipment mounted on a truck.

As per the result of soil boring and laboratory analysis it is concluded that petroleum contamination exists at the site. Location of the contaminated soil is described in section three (3) of this report.

The groundwater table was encountered within the contaminated soil's zone suggesting that the groundwater may also be impacted. The Consultant Roux Associates, Inc. representing the property owner collected groundwater samples for laboratory analysis.

2.0 SOIL INVESTIGATION

Subsurface Evaluation:

A total of twelve (12) soil borings were installed around the building and soil samples were collected to determine if the subsurface soil was impacted by the past and present usage of the property. Boring designations and locations are indicated on the site map contained at the end of this report. Borings were terminated at and/or below the groundwater table. Complete soil boring logs are contained in Appendix I.

At each soil boring location, soil samples were continuously collected in a 4' sample tube with a liner, and the borings were advanced with direct push technology.

Soil was visually inspected for contamination and sample jar headspace measurements were taken for each sample. The headspace measurements consisted of scanning the off-gasses from each sample with a photoionizer detector (PID) to preliminarily determine the level of volatile organic contamination in the sample.

Based upon the visual inspection and headspace measurement, one (1) grab soil sample was submitted for laboratory analysis from each boring. The sample was clearly labeled and properly sealed and chilled in a cooler for transportation to the laboratory. A completed chain-of-custody record accompanied each set of samples.

Samples were analyzed for Volatile Organic Compounds in accordance with EPA method 8260; for Semi-Volatile Organic Compounds in accordance with EPA method 8270 and for Heavy Metals in accordance with EPA method 6010.

The samples was prepared and submitted for analysis from the following boring sample depths.

Soil Boring Data:

Boring No.:	Total Depth:	Sample Depth:	Groundwater Depth:
B-1	12'	8 to 10'	10' ± from surface
B-2	20'	14 to 16'	16' ± from surface
B-3	22'	16 to 18'	16' ± from surface
B-4	20'	16 to 18'	16' ± from surface
B-5	20'	16 to 18'	16' ± from surface
B-6	12'	8 to 10'	8' ± from surface
B-7	16'	12 to 14'	12' ± from surface
B-8	12'	10 to 12'	11' ± from surface
B-9	16'	12 to 14'	12' ± from surface
B-10	14'	11 to 13'	11' ± from surface
B-11	16'	12 to 14'	12' ± from surface
B-12	12'	10 to 12'	11' ± from surface

Site Hydrogeology:

The direction of on-site groundwater is likely to be to the northwest direction.

3.0 DISCUSSION OF ANALYTICAL RESULTS AND CONCLUSIONS

Soil Boring SB-1: None of the targeted volatile and semi-volatile organic compounds exceeded the NYS DEC recommended soil cleanup objective concentration listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046. *Benzo a pyrene - 200*

The heavy metal mercury also slightly exceeds the recommended soil cleanup objective at this location.

Soil Boring B-2: The concentration of a few targeted volatile organic compounds and one semi-volatile organic compound exceeded the recommended Fuel Oil contaminated soil cleanup objective listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046 indicating that soil contamination exists at the site and may have impacted the groundwater

Toluene - 11,000
Xylene - 800

table that is within the contaminated soil zone. In addition one non-Gasoline and/or Fuel oil compound, Tetrachloroethene, also exceeded the soil cleanup objective.

Soil Boring B-3: The concentration of several targeted volatile organic and semi-volatile organic compounds exceeded the recommended Fuel Oil contaminated soil cleanup objective listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046 indicating that soil contamination exists at the site and may have impacted the groundwater table that is within the contaminated soil zone.

The heavy metal mercury also slightly exceeds the recommended soil cleanup objective at this location.

Soil Boring B-4: The concentration of several targeted volatile organic compounds and two (2) semi-volatile organic compound exceeded the recommended Fuel Oil and Gasoline contaminated soil cleanup objective listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046 indicating that soil contamination exists at the site and may have impacted the groundwater table that is within the contaminated soil zone.

Soil Boring SB-5: None of the targeted volatile and semi-volatile organic compounds exceeded the NYS DEC recommended soil cleanup objective concentration listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046.

Soil Boring SB-6: None of the targeted volatile and semi-volatile organic compounds exceeded the NYS DEC recommended soil cleanup objective concentration listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046.

Soil Boring SB-7: None of the targeted volatile and semi-volatile organic compounds exceeded the NYS DEC recommended soil cleanup objective concentration listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046.

Soil Boring B-8: The concentration of several targeted volatile organic compounds and one (1) semi-volatile organic compound exceeded the recommended Fuel Oil and Gasoline contaminated soil cleanup objective listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046 indicating that soil contamination exists at the site and may have impacted the groundwater table that is within the contaminated soil zone. In addition two non-Gasoline and/or Fuel oil compounds also exceeded the soil cleanup objective.

Soil Boring SB-9: None of the targeted volatile and semi-volatile organic compounds exceeded the NYS DEC recommended soil cleanup objective concentration listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046.

Soil Boring B-10: The concentration of a few targeted semi-volatile organic compounds exceeded the recommended Fuel Oil contaminated soil cleanup objective listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046 indicating that soil contamination exists at the site and may have impacted the groundwater table that is within the contaminated soil zone.

Soil Boring B-11: The concentration of a few targeted volatile organic semi-volatile organic compound exceeded the recommended Fuel Oil contaminated soil cleanup objective listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046 indicating that soil contamination exists at the site and may have impacted the groundwater table.

Soil Boring B-12: The concentration of several targeted volatile organic semi-volatile organic compound exceeded the recommended Fuel Oil and Gasoline contaminated soil cleanup objective listed in the NYS DEC Technical and Administrative Guidance Memorandum #4046 indicating that soil contamination exists at the site and may have impacted the groundwater table.

4.0 RECOMMENDATIONS

Upon confirmation of soil and possible groundwater petroleum contamination at the site, a spill was reported to the New York State Department of Environmental Conservation (NYS DEC) on Friday, April 27, 2007. A spill number, 0701186, was assigned to the site.

The current tenant and operator at the site should be instructed to immediately cease use of the three underground storage tanks at the site and remove any product remaining in these tanks.

The current tenant and operator at the site should be instructed to immediately cap the fill port to the pipe leading to the waste oil tank to ensure that no waste oil is added to the waste oil tank.

The trench drains, which are another potential source of contamination, should be filled with gravel and closed with concrete pending development and implementation of a Remedial Action Plan.

The current tenant and operator at the site should be instructed to immediately prepare and implement a NYS DEC approved Remedial Action Plan to address the contamination identified by the Phase II investigation and obtain a no further action letter for the NYS DEC.

Should you have any questions, please feel free to contact us.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

2-Butanone	U	790		µg/Kg-dry	125	4/6/2007 2:33:00 AM
2-Chloroethyl vinyl ether	U	790		µg/Kg-dry	125	4/6/2007 2:33:00 AM
2-Chlorotoluene	U	790		µg/Kg-dry	125	4/6/2007 2:33:00 AM

Qualifiers:

- B Analyte detected in the associated Method Blank
- II Holding times for preparation or analysis exceeded
- ND Not Detected at the Reporting Limit
- U Indicates the compound was analyzed for but not detected

- E Value above quantitation range
- J Analyte detected below quantitation limits
- S Spike Recovery outside accepted recovery limits
- X Value exceeds Maximum Contaminant Level
