**RE: C224203 Former Sterling Transformer - 510 Driggs Avenue
On and off-Site GW Investigation Report**

Dear Messrs. Corcoran, Mustico, and Jones,

Previously this report has also been sent to DEC Counsel Rosalie Rusinko. However, we understand that Ms. Rusinko has retired. Please provide the name of the DEC Counsel who has been assigned to this Site for our records.

This report summarizes the groundwater sampling results of off-site monitoring wells MW1, MW4, MW11, MW12, and MW13, collected at the request of the Department.

Background

The Site (Former Sterling Transformer Corp.) located at 510 Driggs Avenue, Brooklyn, entered into the BCP ("Site) (Site No. C224203) to allow for the cleanup of contamination and to redevelop the Site into a new 6-story mixed use building. A Track 1 Unrestricted Use cleanup was proposed for the Site.

Endpoint soil samples collected following remedial excavation activities indicate a Track 1 Unrestricted Use cleanup has been achieved. Due to the dewatering activities conducted as part of the remedy, the Department requested the collection of groundwater samples from three on-Site dewatering well points (designated as MWA, MWB, and MWC) to demonstrate an improvement in groundwater quality.

Groundwater samples was collected from MWA, MWB and MWC on October 20, 2020. The chlorinated VOCs cis-1,2-dichloroethene (58 ppb), Trichloroethene (52 ppb), and Tetrachloroethene (1,600 ppb) were detected in MWB above GQS. No VOCs were detected above GQS in either MWA or MWC. MW-B was located around the deepest excavation east of the elevator pit. It was suspected that the PCE was being drawn onto the Site from an unknown off-Site source due to the aggressive dewatering efforts, and the fact that a deep well was located nearby MWB. In addition, no PCE was found in any of the on-Site soils.

Groundwater samples were collected from each of the three wells (MWA, MWB, MWC) again on November 11, 2020, December 21, 2020. The results of the November 11, 2020, sampling event showed a lower PCE concentration in MWB (756 ppb), but an increased PCE concentration in MWC (20.6 ppb). Once again, this was attributed to the fact that the deep well withdrawal of groundwater had been reduced, and that the concentration of PCE was not reaching MWB, but closer to MWC. The PCE concentration in MWA (2,365 ppb) and MWC (412 ppb) increased substantially in the samples collected on December 21, 2020, while the PCE concentration in MWB (6.6 ppb) decreased significantly. This

confirmed that PCE was being brought onto the Site from an off-Site source by the perimeter well point system, and that the migration of PCE impacted groundwater should presumably stop once dewatering ceased.

On January 15, 2021, during a telephone call between the Department, the Volunteer and its Consultant, the discovery of PCE in on-Site wells and the data trends summarized above were discussed. The Department requested that the Developer / Volunteer investigate the origin of the PCE by sampling off-Site wells, under the assumption that the PCE was being drawn on-Site by the ongoing dewatering activities. A Work Plan was submitted to the Department which described the existing monitoring wells to be sampled.

A groundwater sample was collected from the five off-site monitoring wells (MW1, MW4, MW11, MW12 and MW13) proposed within the Work Plan on February 19, 2021. The highest PCE concentration was detected in MW12 (eastern sidewalk of Driggs Avenue) at 12 ppb. PCE was detected in MW1 (southeast corner of the site) at 1.7 ppb. PCE was detected in the other three monitoring wells (MW11, MW13, and MW4) at concentrations below 1 ppb.

Groundwater samples were collected from three onsite wells (MWA, MWB, MWC) again on March 19, 2021. A significant reduction in the PCE concentration was noted in both MWA (4.7 ppb) and MWC (29 ppb), but the MWB concentration rebounded to 230 ppb. The reductions noted in the PCE concentrations of the on-Site wells was assumed to be related to the dewatering activities.

On April 14, 2021, during a telephone call between the Department, the Volunteer and its Consultant, the On-Site GW Investigation Report submitted by AMC Engineering on April 12, 2021 summarized all the results above, was discussed. The Department requested that the monthly sampling of the three on-site monitoring wells (MWA, MWB, MWC) until dewatering activities were terminated.

At the request of the Department, groundwater samples were collected MWA, MWB, MWC on April 21, 2021, June 10, 2021, and July 1, 2021 (May was skipped because of scheduling problems.)

During these three additional sampling events, a disposable polyethylene sampling bailer was used to purge and collect samples from each well location. Samples were collected directly into precleaned laboratory supplied glassware, stored in a cooler with ice and submitted to Phoenix Environmental Laboratories of Manchester, CT, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). Samples were analyzed for VOCs via EPA Method 8260.

The results of the onsite GW monitoring over time are shown in the table below.

PCE (ug/L)							
MW	10/20/20	11/11/20	12/21/20	3/19/21	4/21/21	6/10/21	7/1/21
A	ND	0.29	2365	4.7	0.62	5.4	0.35
B	1710	756	6.6	230	110	24	99
C	7.5	20.6	412	29	2.1	2.6	8

AMC contends the dewatering system pulled a slug of PCE contaminated groundwater onto the Site from an off-Site source in late 2020. However, continued operation of the dewatering system seems to have removed the significantly higher PCE concentrations since the PCE concentrations detected in groundwater in July 2021 are drastically lower than the initial surge as shown in the table above.

An August 25, 2021, letter from the Department requested that a groundwater monitoring plan be implemented post construction, to include both the on-Site and the off-Site monitoring wells. It was explained to the Department that the on-Site monitoring wells had been sealed because the cellar slab had been constructed below the groundwater table and that dewatering activities had ceased on July 16, 2021. Once the dewatering had stopped, the groundwater table had recharged to pre-dewatering levels (approximately 12 ft below grade), and cellar slab installed at a depth of 25 ft below grade was now approximately 13 ft below the water table.

Since on-Site wells MWA, MWB, and MWC could no longer be sampled, the Department requested off-Site wells MW1, MW4, MW11, MW12 and MW13 be surveyed, sampled, and analyzed for VOCs. The letter also requested that the report include a history of groundwater elevations and pumping rates during the dewatering process.

Summary of Sampling Activities

On October 23 and 25, 2021, EBC collected groundwater samples from the existing off-Site monitoring wells MW1, MW4, MW11, MW12 and MW13. The wells were purged prior to sampling as per QA/QC protocol. Purge logs provided in Attachment A.

- MW11 is located within the North 9th Street sidewalk. The VOC cis-1,2-dichloroethene (5.8 ppb) was detected above GQS. No other VOCs were detected above GQS.
- MW12 is located within the Driggs Avenue sidewalk. Both TCE (6.3 ppb) and cis-1,2-dichloroethene (13 ppb) were detected above GQS. No other VOCs were detected above GQS.
- MW13 is located within the North 8th Street sidewalk. No VOCs were detected above GQS.
- MW1 is located on the northern sidewalk of North 8th Street. TCE (8.3 ppb) was detected above GQS. No other VOCs were detected above GQS.
- MW4 is located on the eastern side of the property. No VOCs were detected above GQS.

Tabulated Results

The table below compares the February 2021 and October 2021 PCE concentrations of the off-Site monitoring wells.

MW#	PCE (ug/L)	PCE (ug/L) ²
	19-Feb	23-Oct
MW1	1.7	3.3
MW4	0.41	0.48
MW11	<1.0	<1.0
MW12	12	6.3
MW13	<0.1	<1.0

No significant difference in PCE concentrations was noted between the February 2021 and October 2021 sampling results.

The table below summarizes Total VOCs found during the October 2021 sampling event.

MW#	Total VOCs
	23-Oct
MW1	13.1
MW4	4.23
MW11	8.81
MW12	27.1
MW13	3.01

Depth to Water

Prior to sampling depth to water readings were collected. In addition, each of the off-Site wells was surveyed, to establish GW elevation. The cap for MW1 was a PVC fitting which was pressed against the casing and could not be retrieved for the depth to water meter. The table below shows GW elevation in the wells.

MW#	Casing Elev	Screen+Riser	Bottom Screen Elev	DTW (10/23)	GW Elev.
	(ft)	(ft)	(ft)	(ft)	(ft)
MW1	20.11	40	-19.89		
MW4	21.48	40	-18.52	18.61	2.87
MW11	15.95	40	-24.05	12.98	2.97
MW12	15.47	40	-24.53	12.65	2.82
MW13	20.85	40	-19.15	18.01	2.84

Well logs are included in Attachment B.

Dewatering

Dewatering contractor at the Site was ECS. Attachment D contains the Dewatering Plan, and groundwater elevation for the period December 2019 through November 2020. Dewatering activities commenced around December 14, 2019, and ceased on July 16, 2021.

Conclusions

The laboratory results of the groundwater samples collected from the off-site wells in October 2021 noted only slight detections of PCE in groundwater above GQS in MW11, MW12, and MW1, similar to the PCE concentrations reported within the off-site wells in February 2021, which were collected while dewatering system was operating. We contend that remediation is complete and a Certificate of Completions should be issued.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

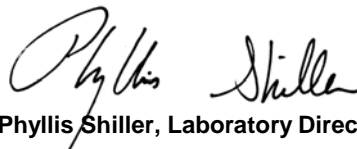

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:

To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style with a large initial "P".

SDG Comments

November 02, 2021

SDG I.D.: GCJ65011

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method 504 or 8011 to achieve this criteria.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

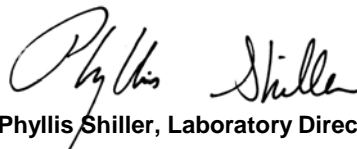

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:

To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

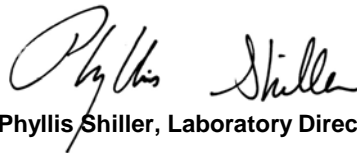

Comments:

TRIP BLANK INCLUDED.

Volatile Comment:

To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
