FACT SHEET

Brownfield Cleanup Program

Former Universal Scrap
Metal Processors Corp.
1181 Flushing Avenue
Brooklyn, NY 11237

December 2023

SITE No. C224210
NYSDEC REGION 2

Cleanup Action Completed at Brownfield Site

Action has been completed to address the contamination related to the Former Universal Scrap Metal Processors Corp. site ("site") located at 1181 Flushing Avenue, Brooklyn, NY under New York State's Brownfield Cleanup Program (BCP). Please see the map for the site location.

Cleanup activities were performed by 25C LLC and Flushing Stewart LLC ("applicants") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). The applicants have submitted a proposed Final Engineering Report (FER) for NYSDEC review which states that cleanup requirements have been or will be achieved to fully protect public health and the environment for the proposed site use.

- Access project documents online through the DECinfo Locator: <https://www.dec.ny.gov/data/DecDocs/C224210/>.
- The documents also are available at the location(s) identified at left under "Where to Find Information."

Highlights of the Site Cleanup: The following activities have been or will shortly be completed to achieve the remedial action objectives:

- Excavation - Excavation and off-site disposal of approximately 16,400 tons of petroleum-impacted and contaminated historic fill material across the site to allow for unrestricted use of the site. Clean fill was brought in to replace the excavated soil and to establish the design grades at the site;
- Collection and analysis of confirmation soil samples to evaluate the effectiveness of the remedy;
- Evaluation of post-excavation groundwater quality to confirm remedial objectives were met; and
- Completing a soil vapor intrusion evaluation.

BROWNFIELD CLEANUP PROGRAM

Next Steps: When NYSDEC approves the FER, it will be made available to the public (see "Where to Find Information"). NYSDEC then will issue a Certificate of Completion (COC) that will be announced in a fact sheet. The applicants would be able to redevelop the site after receiving a COC. In addition, the applicants will be eligible for tax credits to offset a portion of the costs of performing cleanup activities and for redevelopment of the site.

Site Description: The 0.502-acre site is located at 1181 Flushing Avenue in Brooklyn and is a portion of Block 2994, Lot 75 on the NYC Tax map. The site was used as a railroad freight yard from about 1888 until the 1950s or 1960s. After the 1950s/1960s it was used as a filling station and for automotive repair until 2007. In January 2006, eleven underground storage tanks and petroleum-impacted soil was removed under NYSDEC Spill No. 0510000. The site was most recently used as a scrap metal and vehicle dismantling facility from 2007 through 2014.

The on-site buildings were demolished in 2015 and a nine-story commercial building with a hotel and office is under construction.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C224210) at: <https://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=3>

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit: <https://www.dec.ny.gov/chemical/8450.html>

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.
