## Executive Summary

VHB Engineering, Surveying, Landscape Architecture and Geology, P.C. (VHB) has prepared this report to document the results of a Phase II Environmental Site Assessment (ESA) performed in October 2020 in connection with eighteen (18) vacant parcels located on the east side of Chester Street and the west side of Rockaway Avenue, between East New York Avenue to the north and Pitkin Avenue to the south, in the Brownsville neighborhood of the Borough of Brooklyn, City and State of New York.

The subsurface investigation associated with this Phase II ESA was performed in accordance with the Work Plan and Health and Safety Plan (HASP) approved by the New York City Department of Environmental Protection (NYCDEP) in correspondence dated September 20, 2019 issued to the lead agency, the New York City Department of Housing Preservation and Development (NYCHPD). This Phase II ESA was prepared in connection with the redevelopment of the Site with a mixed-use building containing approximately 446 affordable housing units, community facility space as well as retail space.

The following Site conditions below were identified as a result of the subsurface investigation.

### **Soils**

There were no volatile organic compounds (VOCs) detected in soils above New York State Department of Environmental Conservation (NYSDEC) Part 375 Track One Unrestricted Use Soil Cleanup Objectives (UUSCOs) with the exception of xylenes, which were detected in one surficial soil sample, SB-02 (0-2'). There were no VOCs detected above NYSDEC Part 375 Track Two Restricted-Use Restricted-Residential Soil Cleanup Objectives (RRSCOs). The

detection of xylenes in one soil sample can be considered an isolated occurrence due to the lack of any additional VOC detections above regulatory standards throughout the Site.

Semi-volatile organic compounds (SVOCs) were detected in the majority of the soil borings; primarily in shallow and mid-range soil samples. SVOC exceedances above NYSDEC Part 375 Track Two RRSCOs were detected in SB-01 (0-2'), SB-02 (5-7'), SB-03 (5-7'), SB-05 (0-2'), SB-06 (0-2'), SB-06 (2-4'), SB-07 (0-2') and SB-10 (0-2'). Additional SVOCs were also detected in those respective samples that exceeded NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. The widespread detection of the SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene and indeno(1,2,3-cd)pyrene are typical compounds found in historic/urban fill materials from previous site development. There were no detections of SVOCs above UUSCOs in the underlying native sand samples.

Metals were detected in several soil borings above NYSDEC Part 375 Track Two RRSCOs. These soil samples include SB-03 (5-7') (arsenic and lead) and SB-06 (2-4') (barium and lead). Additional metals were detected that exceeded NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. These samples included SB-01 (0-2') (copper, lead, mercury and zinc), SB-02 (15-17') (mercury), SB-03 (0-2') (lead and zinc), SB-03 (5-7') (copper and zinc), SB-05 (0-2') (copper, lead, mercury and zinc), SB-06 (0-2') (barium, lead, mercury and zinc), SB-06 (2-4') (copper, mercury and zinc), SB-07 (0-2') (lead), SB-09 (0-2') (barium, lead, mercury and zinc) and SB-11 (0-2') (lead and zinc). The presence of metals in surficial and mid-range soil samples can likely be attributed to the presence of contaminated historic/urban fill that was observed throughout the majority of the Site. Only one sample collected from the underlying native sands had a detection of metals above UUSCOs – mercury at SB-02 (15-17').

There were no pesticides detected above NYSDEC Part 375 Track Two RRSCOs. However, several soil samples, mainly surficial and mid-range, were identified with concentrations of pesticides that exceed NYSDEC Part 375 Track One UUSCOs. These soil samples include SB-01 (0-2') (4,4'-DDD, 4,4'-DDE, 4,4'-DDT and dieldrin), SB-02 (0-2') (4,4'-DDE and 4,4'-DDT), SB-02 (5-7') (4,4'-DDT), SB-03 (0-2') (4,4'-DDE, 4,4'-DDT and dieldrin), SB-03 (5-7') (4,4'-DDD, 4,4'-DDE, 4,4'-DDT and dieldrin), SB-05 (0-2') (4,4'-DDT), SB-06 (0-2') (4,4'-DDD, 4,4'-DDE, 4,4'-DDT and dieldrin), SB-06 (2-4') (4,4'-DDE, 4,4'-DDT and dieldrin), SB-08 (0-2') (4,4'-DDT) and SB-10 (0-2') (4,4'-DDT). The presence of pesticides can likely be attributed to contaminated urban/historic fill that was observed throughout the majority of the Site. Pesticides were not detected above the UUSCOs in any of the underlying native sand soil samples.

There were no concentrations of polychlorinated biphenyls (PCBs) that exceeded NYSDEC Part 375 Track Two RRSCOs. However, total PCB concentrations in SB-01 (0-2') and SB-10 (4-6') were detected at concentrations that exceeded the NYSDEC Part 375 Track One UUSCO.

VHB recommends that soils within the project that will be excavated during site development be considered as *impaired* or *impacted*. Soils containing UUSCO and RRSCO exceedances within the redevelopment areas should properly be characterized prior to removal from the Site. Contaminated soils should be properly manifested and transported to an appropriate disposal facility capable of accepting soils impacted with VOCs, SVOCs, metals, pesticides and PCBs. Both the shallow and deeper soil horizons sampled during this investigation are proposed to be excavated as part of the future Site redevelopment. As an alternative, soils could also be transported to an alternate location that is capable of accepting and utilizing impacted backfill. These uses include many commercial, industrial and beneficial use facilities.

### **Groundwater**

Based upon the results of the groundwater sampling, there were no pesticides or PCBs detected above NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs). One VOC, tetrachloroethylene (PCE), was detected at a concentration of 5.8 micrograms per liter ( $\mu\text{g/L}$ ) in GW-03, which exceeds the NYSDEC AWQSGV of 5  $\mu\text{g/L}$ . One SVOC, benzo(b)fluoranthene, was detected but below the limit of quantitation in GW-02 at an estimated concentration 0.02  $\mu\text{g/L}$ , which exceeds the NYSDEC AWQSGV of 0.002  $\text{m}\mu\text{g/L}$ . No additional VOCs or SVOCs were detected above NYSDEC AWQSGVs.

PCE was not detected in any of the on-Site groundwater or soil samples. As such, the detection of PCE in the off-Site groundwater monitoring well GW-03 is not likely related to current or former Site uses, but rather an off-Site source. The presence of the permanent off-Site groundwater monitoring well GW-03 suggests that it is used to monitor an off-site environmental or geotechnical condition.

Elevated total concentrations of metals could be attributed to high turbidity. Dissolved concentrations of manganese that exceed NYSDEC AWQSGV were detected in GW-01 and GW-02. The presence of manganese in groundwater is typical in New York City and can often be attributed to the dissolution of surrounding minerals and leaching from soil. Manganese is also naturally occurring in groundwater that has little oxygen and where groundwater flow is considered slow. Dissolved concentrations of sodium were detected in all three groundwater samples (GW-01, GW-02 and GW-03) that exceeded the NYSDEC AWQSGV. The presence of dissolved sodium is also typical in New York City and can be attributed to the Site's proximity to the coast, as well as the leaching of dissolved rock salt utilized for snow melting in urban areas. Further, thallium was detected at an estimated dissolved concentration of 1.68  $\mu\text{g/L}$ , which exceeds the NYSDEC AWQSGV of 0.5  $\mu\text{g/L}$  in GW-03. There is no correlation between soil sample results and the presence of dissolved thallium detected in GW-03. The presence of thallium is typical of ore processing and manufacturing uses. Based upon the known historic use of the Site, it is likely the detection of thallium can be attributed to an off-Site source.

### **Soil Vapor**

Based upon the results of the soil vapor sampling, VOCs were detected at the screening depths within the project area. VOCs included 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3-butadiene, 2,2,4-trimethylpentane, 2-butanone, 2-hexanone, 4-methyl-2-pentanone, acetone, benzene, carbon disulfide, chloromethane, cyclohexane, dichlorodifluoromethane, ethyl alcohol, ethylbenzene, heptane, isopropyl alcohol, n-hexane, xylenes, tert-butyl-alcohol, tetrahydrofuran, toluene and trichlorofluoromethane. Additional chlorinated VOCs subject to the New York State Department of Health (NYSDOH) Soil Vapor/Indoor Air matrices were detected including 111-TCA (SV-02 and SV-04), methylene chloride (SV-02, SV-03 and SV-04) and PCE (SV-02). Each of the compounds subject to NYSDOH matrices were subject to NYSDOH Soil Vapor/Indoor Air Matrix B and the maximum detection was reported at 9.88 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ). Although no sub-slab soil vapor samples or indoor air samples were collected, the soil vapor results were compared to the NYSDOH Soil Vapor/Indoor Air Matrix B, NYSDOH recommends "No Further Action" for sub-slab concentrations less than  $100 \mu\text{g}/\text{m}^3$ .

Given the presence of petroleum- and refrigerant-related VOCs in the soil vapor beneath the Site, as well as the presence of chlorinated VOCs subject to the NYSDOH Soil Vapor/Indoor Air Matrices including 1,1,1-Trichloroethane (111-TCA), PCE and methylene chloride, VHB recommends that soil vapor beneath the Site be considered as *impaired* or slightly *impacted*. The VOCs found in soil vapor at the Site are typical throughout New York City including the borough of the Brooklyn, due to the extensive and dense development history. Given these conditions, VHB believes that no further action would be required with respect to soil vapor at this time. Furthermore, it is expected that the future development at the Site will include a building slab that will act as a barrier to protect future Site occupants from the impacted soil vapor beneath the Site, or as a conservative measure, a soil vapor barrier could be incorporated into the proposed Site development.

## 1

## Introduction

VHB Engineering, Surveying, Landscape Architecture and Geology, P.C. (VHB) has prepared this report to document the results of a Phase II Environmental Site Assessment (ESA) performed in October 2020 in connection with eighteen (18) vacant parcels located on the east side of Chester Street and the west side of Rockaway Avenue, between East New York Avenue to the north and Pitkin Avenue to the south, in the Brownsville neighborhood of the Borough of Brooklyn, City and State of New York (hereinafter the "Site"; see **Figures 1 and 2 in Attachment A**).

The Site is identified by the street addresses and New York City (NYC) Tax Map Block and Lot Nos. noted below:

Parcel	Block	Lot	Address
1	3499	15	47 Chester Street
2	3499	17	Chester Street
3	3499	20	31 Chester Street
4	3499	21	29 Chester Street
5	3499	22	27 Chester Street
6	3499	23	Chester Street
7	3499	24	Chester Street
8	3499	45	348 Rockaway Avenue
9	3499	46	354 Rockaway Avenue
10	3499	47	356 Rockaway Avenue
11	3499	48	Rockaway Avenue
12	3499	50	376 Rockaway Avenue
13	3499	52	380 Rockaway Avenue

<b>Parcel</b>	<b>Block</b>	<b>Lot</b>	<b>Address</b>
<b>14</b>	3499	53	382 Rockaway Avenue
<b>15</b>	3499	54	384 Rockaway Avenue
<b>16</b>	3499	56	388 Rockaway Avenue
<b>17</b>	3499	57	390 Rockaway Avenue
<b>18</b>	3499	58	392 Rockaway Avenue

The Phase II ESA Investigation activities were conducted in October 2020 in accordance with the New York City Department of Environmental Protection (NYCDEP) approved Phase II ESA Work Plan dated August 16, 2019. The Phase II ESA Work Plan was prepared as part of the City Environmental Quality Review (CEQR) process. The Phase II ESA Work Plan and associated Health and Safety Plan (HASP) was approved by NYCDEP in correspondence issued to the lead agency (Department of City Planning [NYCDCP]) dated September 30, 2019 (see **Attachment D**)

# 2

## Site Background

### 2.1 Site Location and Current Usage

The Site is predominantly vacant and vegetated, with the exception of Lot 45 (348 Rockaway Avenue), which is partially utilized as an electrical supply storage yard associated with the adjacent business to the north (Colonial Electric Supply). The Site is enclosed by a chain-link fence on all sides, with two gated entrances that are secured with padlocks; one on Chester Street and one on Rockaway Avenue. One (1) intermodal storage container are located on the northeastern and one (1) additional intermodal storage container is located on the southeastern portions of the Site. A vegetated soil stockpile, a downed tree, and various refuse and debris are located on the northern portions of the Site. The southwestern portion of the Site is used as a driveway for the residential structure adjacent to the south, which contains a vehicle behind a locked chain-link fence/gate.

#### 2.1.1 Description of Surrounding Properties

Adjacent to the north is a commercial electrical supply business, located on the southern side of East New York Avenue. Beyond are numerous commercial and mixed-use commercial and multi-family residential properties. Multi-family residences along Chester Street and commercial and mixed-use commercial and residential properties along Rockaway Avenue to the south, with commercial properties along Pitkin Avenue, beyond. Commercial and mixed-use commercial and residential properties along Rockaway Avenue are present to the east, with multi-family public housing beyond. Institutional properties and multi-family residences to the west across Chester Street, and beyond.

## 2.2 Investigation Rationale

VHB prepared a Phase I ESA for the site, dated March 11, 2019, hereinafter the "Phase I ESA". The Phase I ESA included an assessment of the on-site conditions as well as Site history and a review of the surrounding/neighborhood properties that may have the potential to have environmental impacts on the Site. Based on the Site proposed redevelopment plans, as well as the findings and conclusions of the Phase I ESA (see **Section 2.2.1**), NYCDEP, as reviewing agency for the New York City Department of Housing Preservation and Development (HPD) required a Phase II ESA Work Plan be prepared for review and approval. As such, in accordance with Chapter 12, Section 300 of the *2014 CEQR Technical Manual*, with regulatory oversight provided by NYCDEP, a Phase II ESA Work Plan and associated HASP were prepared by VHB and approved by NYCDEP.

### 2.2.1 Previous Environmental Report

The Phase I ESA identified one recognized environmental condition (REC) for the Site. This REC is summarized as follows:

- › *Given the development history of the Site, several manufacturing uses were identified on Lot Nos. 48, 50, 54, 56, 57, and 58. Specifically, several furniture upholsterers, cabinet manufacturing, stone cutting, and manufacturing operations occupied these parcels. Former manufacturing relating to furniture upholstery has the potential to have impacted subsurface conditions based on the products utilized during these processes. Some represent a REC for the Site.*

In addition to the aforementioned REC, the following business environmental risks (BERs) were identified in the Phase I ESA:

- › *Based upon available New York City Department of Buildings (NYCDOB) records, fuel oil burner applications were identified for several of the former buildings on Lot 5 Site Investigation Nos. 17, 46, 50, and 56. As such, there is a potential for fuel oil to have been previously utilized in the former on-site buildings. The site-reconnaissance identified former building foundations and slabs across the Site. It is possible that any potential tanks, including basement aboveground storage tanks (ASTs), may have been removed prior to demolition. However, VHB was unable to verify the existence of any potential petroleum storage tanks at the Site based on the lack of tank documentation including registrations and municipal records. As such, the potential presence of petroleum storage tanks at the Site represents a BER.*
- › *Based on a review of historic Sanborn Fire Insurance maps, historic aerial photographs, and NYCDOB records, the Site was improved with residential and commercial structures since at least 1907 until the mid-1980s, when all structures were demolished. During the site reconnaissance, VHB observed evidence of several former building foundations. This would indicate that at least some of the former buildings were demolished into their basements. Given the history of the Site and lack of demolition records, the presence of urban fill material can be expected. Although the presence of urban fill material is typical in densely developed portions of New York City, it should be dealt with accordingly prior to any*

*potential redevelopment. The likely presence of fill materials beneath the Site is considered a BER.*

- › *Although the Site is currently vacant and undeveloped, several of the former structures were listed in the NYCDOB records database as containing elevators. Given that the Site has been developed with various commercial and residential structures since at least 1907, the ages of the former onsite buildings would indicate the potential for building materials to contain polychlorinated biphenyls (PCBs). As demolition of all on-site buildings occurred between 1972 and 1984, it cannot be verified whether any PCB containing materials were properly disposed prior to demolition. Therefore, based on the potential presence of PCBs in demolition debris, same is considered a BER.*
- › *A visual inspection of potential painted surfaces was conducted during the site reconnaissance. Although, no painted surfaces were observed, based upon the ages of the former on-site buildings and lack of demolition records, there is a potential for LBP to be present in demolition debris. Same is considered a BER for the Site.*
- › *No suspect ACM was observed during the visual inspections. However, given the age of the former on-site buildings, the demolition debris could potentially contain roofing materials or insulation that have the potential to be considered ACM. Same is considered a BER for the Site.*

# 3

## Site Investigation

As outlined in the NYCDEP-approved Phase II ESA Work Plan, the following investigatory activities took place in October 2020:

- › Advancement of 11 soil borings and collection and analysis of at least 22 soil samples;
- › Conversion of two (2) soil borings to temporary groundwater monitoring wells and collection and analysis of two (2) groundwater samples from converted soil borings, as well as the collection and analysis of one (1) groundwater sample from an existing monitoring well; and
- › Installation of four (4) temporary soil vapor sampling points and collection and analysis of four (4) soil vapor samples.

The following sections provide detailed summaries of the investigative findings. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC)'s Part 375-6.8(a) Unrestricted Use Soil Cleanup Objectives (UUSCOs) and NYSDCE Part 375-6.8(b) Restricted Use Restricted-Residential Soil Cleanup Objectives (RRSCO). Groundwater sample results are compared to the NYSDCE Technical and Operational Guidance Series (TOGS) 1.1.1 list of Ambient Water Quality Standards and Guidance Values (AWQSGVs). Although sub-slab soil vapor and indoor air samples were not collected and given that New York State does not have standards for soil vapor, for comparative purposes, soil vapor sample results are conservatively compared to the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, May 2017 (Guidance) Soil Vapor/Indoor Air Matrices (**Attachment G**).

### 3.1 Soil Sampling

Soil Mechanics Drilling Corp (Soil Mechanics), subcontracted by Blue Sea Development Company, LLC, advanced 11 soil borings between October 13 and 15, 2020 at locations across the 18 Site parcels as shown on **Figure 3** in **Attachment A**. The 11 borings, designated as SB-01 through SB-11, were used to identify/characterize Site soils.

The soil borings were advanced to approximately 13 ft below ground surface (bgs), which is the anticipated terminal excavation depth for the future Site development. Prior to boring, any debris or other materials located in the vicinity of the soil boring location, were cleared/relocated, as needed. All 11 soil borings were advanced using a GeoProbe® Direct push drill rig. Continuous soil cores were collected utilizing factory-new acetate macrocore soil sampling tubes at each boring location from the surface to the terminal boring depth. The soil boring logs are included in **Attachment F**.

At least two soil samples were collected from each continuous soil core for laboratory analysis. In accordance with the Work Plan, one surficial sample (ranging from 0-2 ft bgs) and one deeper sample (from approximately 13-15 ft bgs) were collected from each boring location. Soils were observed for suspect characteristics (e.g., staining, odors, elevated photoionization [PID] detections<sup>1</sup>, etc.). Additionally, evidence of historical fill material and construction/demolition debris including pieces of brick, concrete, wood, plastic, and glass was identified at depths ranging from ground surface soils to approximately 5-10 ft bgs. Given the observed conditions and to further characterize the historic fill material, six (6) additional "mid-range" samples were collected at certain boring locations.

In total, 28 soil samples were collected. Soil samples were transferred from the macrocores directly into laboratory-supplied glassware, stored in an ice-packed cooler and transported to Alpha Analytical, Inc<sup>2</sup>. (Alpha) of Westborough, Massachusetts. under appropriate chain-of-custody protocols. Consistent with the *CEQR Technical Manual* and the approved Phase II ESA Work Plan, soil samples were analyzed for the following parameters:

- › Target Compound List (TCL) volatile organic compounds (VOCs) using United States Environmental Protection Agency (USEPA) Method 8260<sup>3</sup>;
- › TCL semi-volatile organic compounds (SVOCs) using USEPA Method 8270;
- › Target Analyte List (TAL) Metals using USEPA Methods 6010 and 7471;
- › Pesticides using USEPA Method 8081; and
- › Polychlorinated biphenyls (PCBs) using USEPA Method 8082.

Soil analytical results are summarized and compared to the UUSCOs (Track One) and RRSCO's (Track Two) in **Table 1** of **Attachment B**, the complete laboratory data reports are included in **Attachment E**. RRSCO A summary the results is provided in **Section 4.2**.

---

<sup>1</sup> A PID is a portable field instrument capable of detecting a wide range of volatile organic compounds (VOCs).

<sup>2</sup> Alpha is a NYSDOH Environmental Laboratory Approval Program (ELAP) and National Environmental Laboratory Accreditation Program (NELAP)-certified laboratory

<sup>3</sup> All VOC soil samples collected and submitted for laboratory analysis were preserved using USEPA Method 5035.

## 3.2 Groundwater Sampling

Groundwater samples were collected from two (2) locations within the Site and one (1) groundwater sample was collected from an existing monitoring well located in the sidewalk along Chester Street (see **Figure 3** of **Attachment A**), immediately outside of the chain-linked boundary of the Site.

Two (2) soil borings (SB-01 and SB-02) were converted to temporary monitoring wells for groundwater sampling. A third groundwater sample was proposed to be collected from SB-03, however, in accordance with the approved Work Plan, the existing groundwater monitoring well located in the sidewalk was determined to be viable and the third groundwater sample was collected at this location (sample ID GW-03, see **Figure 3** of **Attachment A**).

As discussed above, soil borings were advanced to groundwater utilizing the GeoProbe® drill rig. Groundwater was encountered at approximately 39 ft bgs. All non-dedicated drilling equipment was field decontaminated prior to use at the Site and between sampling locations. Groundwater samples were collected using factory-new polyethylene tubing through dedicated GeoProbe® sampling rods with stainless steel 0.02-inch slotted screen. At least three to five well volumes of groundwater were purged from each monitoring location, using an inertia pump.

The three (3) groundwater samples (GW-01 through GW-03) were collected directly into laboratory-supplied glassware, stored in ice-packed coolers, and transported to Alpha under appropriate chain-of-custody protocols. Consistent with the *CEQR Technical Manual* and the approved Work Plan, groundwater samples were analyzed for the following parameters:

- › TCL VOCs using USEPA Method 8260;
- › TCL SVOCs using USEPA Method 8270;
- › TAL Metals (total and dissolved concentrations [a.k.a. filtered and unfiltered, respectively]) using USEPA Methods 6010 and 7471;
- › Pesticides using USEPA Method 8081; and
- › PCBs using USEPA Method 8082.

Groundwater sample results are summarized and compared to NYSDEC TOGS 1.1.1 list of AWQSGVs in **Table 2** of **Attachment B**, the complete laboratory data reports are included in **Attachment E**. A summary the results is provided in **Section 4.3**.

## 3.3 Soil Vapor Sampling

Soil vapor samples were collected to assess the potential for a vapor encroachment condition (VEC) at the Site. The Site will be excavated to an approximate depth of 13 ft bgs to facilitate redevelopment and construction. As such, four (4) temporary soil vapor sampling points (SV-01 through SV-04) were installed to a depth of approximately 13.5 ft bgs, or just below the proposed terminal excavation depth, to be considered as representative of future building slab conditions at the Site.

Temporary soil vapor sampling points consisting of stainless-steel vapor screens attached to factory-new polyethylene tubing were installed utilizing the GeoProbe® drill rig at each location. Once at the terminal depth, the borehole surrounding the vapor point was backfilled with clean sand and sealed at the surface using non-toxic clay bentonite to prevent ambient air from being drawn into the boreholes. The areas immediately above each sample point's bentonite seal were encapsulated with a canister creating an annular space. Helium was introduced into each annular space as a tracer gas to assess the potential for leaks of ambient air into the sample tubing.

Each soil vapor samples was collected into a 2.7-liter laboratory-supplied vacuum Summa canister over a two-hour period using a laboratory-supplied flow controller set to a rate of approximately 0.0225 liters per minute (LPM), consistent with NYSDOH Guidance. Each of the four (4) Summa canisters were submitted to Alpha under appropriate chain-of-custody protocol for analysis of VOCs using USEPA Method TO-15. In addition, the soil vapor samples were also analyzed for helium for QA/QC purposes, as discussed above. No existing buildings are present at the Site, therefore, no indoor air samples or sub-slab soil vapor samples were collected. The NYSDOH guidance provides Decision Matrices<sup>4</sup> (see **Attachment G**) to determine if no further action, monitoring, or mitigation is necessary for detections of various compounds in sub-slab soil vapor and indoor air. Although no indoor air or sub-slab soil vapor samples were collected, the soil vapor results were conservatively compared to the NYSDOH Decision Matrices.

Soil vapor sample results are summarized and compared to the NYSDOH Decision Matrices in **Table 3** of **Attachment B**, the complete laboratory data reports are included in **Attachment E**. A summary the results is provided in **Section 4.4**.

---

<sup>4</sup> Provided in NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006 and amended May 2017.

# 4

## Phase II ESA Investigation Results

The following sections provide a summary of the geologic and hydrogeologic findings, and the soil, groundwater, and soil vapor data that were generated during the Site Investigation.

### 4.1 Geophysical Survey

Based on the vacant/undeveloped nature of the Site, an on-site geophysical survey was not implemented. However, a one-call utility mark-out was completed in accordance with local laws to locate buried electric, natural gas, telecommunications, utilities, etc. Precautionary measures were implemented including hand-clearing, where necessary, utilizing field-decontaminated stainless-steel hand auger prior to utilizing heavy machinery to further advance soil borings. No USTs or physical anomalies were encountered during the investigation.

### 4.2 Soil Sampling

As discussed in **Section 3.1**, 11 soil borings were advanced across the Site and at least two soil samples were collected from each location. The soil boring locations are shown on **Figure 3 of Attachment A**, the sample results are summarized in **Table 1 of Attachment B**, and the complete laboratory data reports are included in **Attachment E**. A summary of soil sampling results is provided in the sub-sections below.

### 4.2.1 Soil Boring SB-01

Soil boring SB-01 was advanced in the northeastern portion of the Site at the approximately boundary between Lots 46 and 47, see **Figure 3 in Attachment A**. Soil boring SB-01 was advanced to a terminal depth of 15 ft bgs, to be representative of anticipated future excavation depths for the proposed building. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-01 generally consisted of an organic surficial layer underlain by typical urban fill with a mixture of brick, organic matter and wood debris from approximately 2-7 feet bgs. Native sands were encountered below the urban fill. No PID detections (greater than 0.4 part per million [ppm]) were recorded within the soils from SB-01.

#### Sample Results

As indicated on **Table 1 in Attachment B**, no VOCs were detected in either the shallow or deep soil samples above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs. One (1) SVOC, benzo(k)fluoranthene, was detected in shallow soil sample SB-01 (0-2') at a concentration of 2.5 milligrams per kilogram (mg/kg), which exceeds the NYSDEC Part 375 UUSCO of 0.8 mg/kg, but is below the NYSDEC Part 375 Track Two RRSCO of 3.9 mg/kg. Six (6) additional SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenzo(a,h)anthracene and indeno(1,2,3-cd)pyrene were detected in SB-01 (0-2') at concentrations that exceed the NYSDEC Part 375 Track Two RRSCOs. No SVOCs were detected in deeper soil sample SB-2 (13-15') above laboratory method detection limits (MDLs). The metals copper, lead, zinc and mercury were each detected in shallow soil SB-01 (0-2') above NYSDEC Part 375 Track One UUSCOs but below NYSDEC Part 375 Track Two RRSCOs. No additional metals were detected in soil samples SB-01 (0-2') and SB-02 (13-15'). No PCBs were detected above laboratory MDLs in SB-01 (13-15'). However, total the PCB concentration in shallow soil sample SB-01 (0-2') was 0.158 mg/kg, which exceeds the NYSDEC Part 375 UUSCO of 0.1 mg/kg, but below the NYSDEC Part 375 Track Two RRSCOs of 0.81 mg/kg. Four (4) pesticides, 4,4'-DDD, 4,4'-DDE, 4,4'-DDT and dieldrin, were detected in shallow soil sample SB-01 (0-1') at concentrations above their respective NYSDEC Part 375 Track One UUSCOs, but below their respective NYSDEC Part 375 Track Two RRSCOs. No pesticides were detected in deeper soil sample SB-01 (13-15') above laboratory MDLs.

### 4.2.2 Soil Boring SB-02

Soil boring SB-02 was advanced in the southeastern portion of the Site at the approximate boundary between Lots 47 and 48, as indicated on **Figure 3 in Attachment A**. Soil boring SB-02 was advanced to a terminal depth of 20 ft bgs, to assess soil and fill horizons at and beyond future excavation depths for the proposed building. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-02 consisted of medium to coarse sands within the surficial layer to 3 feet bgs, underlain by urban fill material containing a mixture of brick fragments and concrete construction and demolition (C&D) debris to approximately 12 feet bgs, before transitioning to native

sands below. PID readings of 4.0 ppm were detected in fill material at approximately three-to-five feet bgs. One PID detection above background (78.6 ppm) occurred in soils screened from 1.5-foot bgs; however, no VOCs were detected in the soil sample as summarized below. No additional PID readings (greater than 0.5 part per million [ppm]) were recorded within the soils from SB-02.

In addition to the two (2) soil samples collected from SB-02 in accordance with the approved NYCDEP Work Plan, an additional mid-range soil sample was collected and analyzed from 5-7 feet bgs to further characterize urban/historic fill materials present at the Site.

### Sample Results

As indicated in **Table 1** in **Attachment B**, total xylenes were detected in SB-02 (0-2') at a concentration of 0.28 mg/kg, which exceeds the NYSDEC Part 375 Track One UUSCO of 0.26 mg/kg, but well below NYSDEC Part 375 Track Two RRSCOs. No additional VOCs were detected above NYSDEC standards in SB-02. No SVOCs were detected above NYSDEC Part 375 Track One UUSCOs in SB-02 (0-2'). However, four SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene were detected at a in mid-range sample SB-02 (5-7') at concentrations that exceeded their respective NYSDEC Part 375 Track Two RRSCOs. No SVOCs were detected above laboratory MDLs in SB-02 (15-17'). No metals were detected in exceedance of NYSDEC Part 375 Track One and Track Two SCOs in samples SB-02 (0-2') and SB-02 (5-7'). However, mercury was detected in deeper soil sample SB-02 (15-17') at a concentration of 0.28 mg/kg, which exceeds NYSDEC Part 375 Track One UUSCO of 0.18 mg/kg, but below NYSDEC Part 375 Track Two RRSCO of 0.81 mg/kg. The pesticides 4,4'-DDE and 4,4'-DDT were detected above NYSDEC Part 375 Track One UUSCOs in SB-02 (0-2') but below NYSDEC Part 375 Track Two RRSCOs. Additionally, 4,4'-DDT was detected above its NYSDEC Part 375 Track One UUSCO in SB-02 (5-7') but below NYSDEC Part 375 Track Two RRSCO. No pesticides were detected above laboratory MDLs in SB-02 (15-17'). No PCBs were detected above laboratory MDLs in mid-range sample SB-02 (5-7') and deeper sample SB-02 (15-17'). Furthermore, no PCBs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in shallow soil sample SB-01 (0-2').

### **4.2.3 Soil Boring SB-03**

Soil boring SB-03 was advanced along the western portion of the Site at a central location on Lot 17, as shown on **Figure 3** in **Attachment A**. Soil boring SB-03 was advanced to a terminal depth of 15 ft bgs, to assess soil and fill horizons at and slightly beyond future excavation depths for the proposed building. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-03 consisted of medium to coarse sands and urban fill materials in the surficial layer down to 5 feet bgs underlain by urban fill material containing a mixture of brick fragments and concrete C&D debris down to approximately 7 feet bgs, before transitioning to native sands below. PID readings of

ranging up to 12.6 ppm were detected in fill material at the surficial horizon, with additional PID detections up to 8.1 ppm throughout the soil boring SB-03 location.

In addition to the two (2) soil samples collected from SB-03 in accordance with the approved NYCDEP Work Plan, an additional mid-range soil sample was collected and analyzed from 5-7 feet bgs to further characterize urban/historic fill materials present at the Site.

#### Sample Results

As indicated in **Table 1** in **Attachment B**, no VOCs or PCBs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in each of the soil samples collected at the SB-03 location. No SVOCs were detected in shallow soil sample SB-03 (0-2') above NYSDEC Part 375 SCOs, and no SVOCs were detected in deeper soil sample SB-03 (13-15') above laboratory MDLs. However, the SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene were each detected in mid-range sample SB-03 (5-7') at concentrations that exceed their respective NYSDEC Part 375 Track Two RRSCOs. Additionally, chrysene was detected in mid-range sample SB-03 (5-7') at a concentration that exceeds its NYSDEC Part 375 Track One UUSCO but was below its NYSDEC Part 375 Track Two RRSCO. Two metals, lead and zinc, were detected in shallow soil SB-03 (0-2') at concentrations that exceeded NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. Copper and zinc were detected in mid-range sample SB-03 (5-7') that exceeded NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. Two metals, barium and lead, were detected in mid-range sample SB-03 (5-7') that exceed NYSDEC Part 375 Track Two RRSCOs. Pesticides were detected in both the shallow and mid-range samples SB-03 (0-2') and SB-03 (5-7) at concentrations that exceeded NYSDEC Part 375 Track One UUSCOs but below NYSDEC Part 375 Track Two RRSCOs. No pesticides were detected above laboratory MDLs in deeper sample SB-03 (13-15').

#### **4.2.4 Soil Boring SB-04**

Soil boring SB-04 was advanced along the northwestern portion of the Site proximate to the central boundary of Lots 23 and 24, as indicated on Figure 3 in Attachment A. Soil boring SB-04 was advanced to a terminal depth of 20 feet bgs, to assess soil and fill horizons at and slightly beyond future excavation depths for the proposed building. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-04 consisted of a mixture of organic and sands at the shallow horizon down to 2 feet bgs, followed by urban fill material containing a mixture of brick/glass fragments and concrete C&D debris down to approximately 5 feet bgs, before transitioning to native sands below. No PID readings (above 0.4 ppm) were detected during the screening of soil intervals at soil boring SB-04.

### Sample Results

As indicated on **Table 1** in **Attachment B**, there were no VOCs, SVOCs, metals, pesticides or PCBs detected above NYSDEC Part 375 Track One UUSCOs in both shallow soil sample SB-04 (0-2') and deeper soil sample SB-04 (13-15').

## **4.2.5 Soil Boring SB-05**

Soil boring SB-05 was advanced on the northern central portion of the Site, within the northwestern boundary of Lot 48, as indicated on **Figure 3** in **Attachment A**. Soil boring SB-05 was advanced to a terminal depth of 15 feet bgs, to assess soil and fill horizons at and slightly beyond future excavation depths for the proposed building. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-05 consisted of a mixture of medium to fine grained sands and urban fill material with brick fragments from grade to approximately 5 feet bgs. Apparent native sands were encountered below. No PID detections (max 0.2 ppm) were recorded at the screened intervals of soil boring SB-05.

### Sample Results

As indicated on **Table 1** in **Attachment B**, no VOCs or PCBs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in each of the soil samples collected at the SB-05 location. The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and indeno(1,2,3-cd)pyrene were detected in surficial soil sample SB-05 (0-2') at concentrations that exceed their respective NYSDEC Part 375 Track Two RRSCOs. One additional exceedance of chrysene was also detected in SB-05 (0-2') above its NYSDEC Part 375 Track One UUSCO but below its Track Two RRSCO. No SVOCs were detected in deeper soil sample SB-05 (13-15') above laboratory MDLs. One pesticide, 4,4'-DDT, was detected in shallow soil sample SB-05 (0-2') that exceeds the NYSDEC Part 375 Track One UUSCO but below the Track Two RRSCO. No additional pesticides were detected above NYSDEC standards in SB-05. Copper, lead, mercury and zinc were each detected in shallow soil sample SB-05 (0-2') above their respective NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. No additional metals were detected above applicable NYSDEC Part 375 SCOs in SB-05.

## **4.2.6 Soil Boring SB-06**

Soil boring SB-06 was advanced along the eastern portion of the Site proximate to the boundary of Lots 48 and 50, as shown on **Figure 3** in **Attachment A**. Soil boring SB-06 was advanced to a terminal depth of 15 ft bgs. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-06 consisted of medium to coarse sands with a mixture of urban fill materials in the surficial layer down to 5 feet bgs before transitioning to native sands below. PID detections up to 15 ppm were observed in fill material in various depth intervals at SB-06.

In addition to the two (2) soil samples collected from SB-06 in accordance with the approved NYCDEP Work Plan, an additional mid-range soil sample was collected and analyzed from 2-4 feet bgs to further characterize urban/historic fill materials present at the Site.

#### Sample Results

As indicated on **Table 1** in **Attachment B**, no VOCs or PCBs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in each of the soil samples collected at the SB-06 location. The SVOCs benz(a)anthracene, benzo(b)pyrene, benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene were detected above their respective NYSDEC Part 375 Track Two RRSCOs in shallow and mid-range soil samples SB-06 (0-2') and SB-06 (2-4'). Chrysene and dibenzo(a,h)anthracene was also detected above NYSDEC Part 375 Track Two RRSCOs in surficial soil sample SB-06 (0-2'). Chrysene was detected in mid-range soil sample SB-06 (2-4') above the NYSDEC Part 375 Track One UUSCO but below Track Two RRSCO. The pesticides 4,4'-DDE and 4,4'-DDT were detected in both shallow and mid-range soil samples SB-06 (0-2') and SB-06 (2-4') above NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. Additionally, 4,4'-DDD and dieldrin were detected in shallow soil sample SB-07 (0-2') above Track One UUSCOs but below Track Two RRSCOs. No pesticides were detected above laboratory MDLs in deeper soil sample SB-06 (13-15'). With respect to metals, barium, lead, mercury and zinc were detected in shallow soil sample SB-06 (0-2') above NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. Barium and lead were detected in mid-range sample SB-06 (2-4') above NYSDEC Part 375 Track Two RRSCOs. Additionally, copper, mercury and zinc were also detected in mid-range sample SB-07 (2-4') above NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs.

One (1) blind duplicate was submitted for laboratory analysis for deeper soil sample SB-06 (13-15'). The laboratory results confirm no VOCs, SVOCs, metals, pesticides or PCBs were detected either above laboratory MDLs or in exceedance of NYSDEC Part 375 SCOs, which are consistent with the parent sample results, as shown on **Table 1** in **Attachment B**.

#### **4.2.7 Soil Boring SB-07**

Soil boring SB-07 was advanced along the western portion of the Site proximate to the boundary of Lots 20 and 21, as shown on **Figure 3** in **Attachment A**. Soil boring SB-07 was advanced to a terminal depth of 20 ft bgs. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-07 consisted of medium to coarse sands with a mixture of urban fill materials in the surficial layer down approximately 5 feet bgs before transitioning to native sands below. No PID detections were recorded within the SB-07 soil intervals.

### Sample Results

As indicated on **Table 1** in **Attachment B**, no VOCs, pesticides or PCBs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in each of the soil samples collected at the SB-07 location. The SVOCs benz(a)anthracene, benzo(b)pyrene, benzo(b)fluoranthene, chrysene, dibenzo(a,h)anthracene and indeno(1,2,3-cd)pyrene were detected above their respective NYSDEC Part 375 Track Two RRSCOs in shallow soil sample SB-07 (0-2'). Benzo(k)fluoranthene was also detected above the NYSDEC Part 375 Track One UUSCO but below the Track Two RRSCO. With respect to metals, lead was detected in shallow soil sample SB-07 (0-2') above its NYSDEC Part 375 Track One UUSCO but below the Track Two RRSCO.

#### **4.2.8 Soil Boring SB-08**

Soil boring SB-08 was advanced on the central portion of the Site, along the western portions of Lot 50, as shown on **Figure 3** in **Attachment A**. Soil boring SB-08 was advanced to a terminal depth of 15 ft bgs. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-08 consisted of medium to coarse sands in surficial soils, with a fill layer consisting of medium to coarse grained gray-brown sand with brick fragments down to approximately 8 feet bgs, before transitioning to native sands, below. No PID detections were recorded within the SB-08 soil intervals.

### Sample Results

As indicated on **Table 1** in **Attachment B**, no VOCs, SVOCs, metals or PCBs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in the two soil samples collected at the SB-08 location. One pesticide, 4,4'-DDT, was detected in shallow soil sample SBo8 (0-2') at a concentration of 0.00524 mg/kg, which exceeds the NYSDEC Part 375 UUSCO of 0.0033 mg/kg but is below the NYSDEC Part 375 RRSCO of 7.9 mg/kg.

#### **4.2.9 Soil Boring SB-09**

Soil boring SB-09 was advanced on the eastern-central portion of the Site, along the boundary of Lots 52 and 53, as shown on **Figure 3** in **Attachment A**. Soil boring SB-09 was advanced to a terminal depth of 15 ft bgs. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-09 consisted of medium to coarse sands and urban/historic fill with brick and concrete down to approximately 7 feet bgs, before transitioning to native sands, below. No PID detections were recorded within the SB-09 soil intervals.

As indicated in **Table 1** in **Attachment B**, no VOCs, SVOCs, pesticides or PCBs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in the two soil samples collected at the SB-09 location. However, the metals barium, lead, mercury and zinc were detected in shallow soil sample SB-09 (0-2') exceeding the NYSDEC Part

375 Track One UUSCOs but below their respective Track Two RRSCOs. There were no metals detected above NYSDEC Part 375 regulatory standards in deeper soil sample SB-09 (13-15').

#### 4.2.10 Soil Boring SB-10

Soil boring SB-10 was advanced along the southeastern portions of the Site on the central portions of Lot 54, as shown on **Figure 3 in Attachment A**. Soil boring SB-10 was advanced to a terminal depth of 20 ft bgs. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-10 consisted of medium to coarse sands with sandy loam in the surficial horizon down to 3 feet bgs. A fill layer consisting of brick fragments, wood and C&D was observed at 3-7 feet bgs before transitioning to native sands below. No PID detections were recorded within the SB-10 soil intervals.

In addition to the two (2) soil samples collected from SB-10 in accordance with the approved NYCDEP Work Plan, an additional mid-range soil sample was collected and analyzed from 4-6 feet bgs to further characterize urban/historic fill materials present at the Site.

##### Sample Results

As indicated on **Table 1 in Attachment B**, no VOCs or metals were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in each of the soil samples collected at the SB-10 location. The SVOCs benz(a)anthracene, benzo(b)pyrene, benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene were detected above their respective NYSDEC Part 375 Track Two RRSCOs in shallow soil samples SB-010 (0-2'). Chrysene and dibenzo(a,h)anthracene was also detected above NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs in surficial soil sample SB-10 (0-2'). No SVOCs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in the mid-range or deeper samples at SB-10. One pesticide, 4,4'-DDEET, was detected at a concentration of 0.0055 mg/kg in shallow soil sample SB-10 (0-2'), which exceeds the NYSDEC Part 375 Track One UUSCO of 0.0033 mg/kg, but was well below the Track Two RRSCO of 7.9 mg/kg. PCBs were detected in the mid-range sample SB-10 (4-6') at a concentration of 0.22 mg/kg, which exceeds the NYSDEC Part 375 Track One UUSCO of 0.1 mg/kg, but below the Track Two RRSCO of 1.0 mg/kg.

#### 4.2.11 Soil Boring SB-11

Soil boring SB-11 was advanced along the southwestern portion of the Site within the central portions of Lot 15, as shown on **Figure 3 in Attachment A**. Soil boring SB-11 was advanced to a terminal depth of 15 ft bgs. As indicated in the soil boring logs provided in **Attachment F**, soil encountered within SB-11 consisted of medium to coarse sands with sandy loam and organics in the surficial horizon down to 5 feet bgs before transitioning to native sands, below. No PID detections (exceeding 0.5 ppm) were recorded within the SB-11 soil intervals.

In addition to the two (2) soil samples collected from SB-11 in accordance with the approved NYCDEP Work Plan, an additional mid-range soil sample was collected and analyzed from 2-5 feet bgs to further characterize urban/historic fill materials present at the Site.

#### Sample Results

As indicated on **Table 1** in **Attachment B**, no VOCs, SVOCs, pesticides or PCBs were detected above NYSDEC Part 375 Track One UUSCOs or Track Two RRSCOs in each of the soil samples collected at the SB-11 location. Lead and zinc, were detected in surficial soil sample SB-11 (0-2') at concentrations that exceed their respective NYSDEC Part 375 Track One UUSCOs but below their Track Two RRSCOs. No additional metals were detected in soil samples collected at SB-11 that exceeded NYSDEC Part 375 SCOs.

### **4.3 Groundwater Samples**

As discussed in **Section 3.2**, three (3) groundwater samples were collected to assess Site groundwater conditions. The sample locations are shown on **Figure 3** of **Attachment A**, the samples results are summarized in **Table 2** of **Attachment B**, and the complete laboratory data reports are included in **Attachment E**. A summary of the groundwater results is provided in the sub-sections below.

#### **4.3.1 Groundwater Sample GW-01**

Soil boring SB-01 was advanced into groundwater, to a depth of 45 feet bgs using a hollow-stem auger and a temporary one-inch PVC monitoring well was installed. The depth to groundwater was recorded at 39.1 feet bgs. Using an inertial pump, at least three well volumes of groundwater were purged and groundwater sample GW-01 was collected.

As indicated in **Table 2** of **Attachment B**, no VOCs, SVOCs, pesticides or PCBs were detected in GW-01 above applicable NYSDEC AWQSGVs. The metals arsenic, barium, beryllium, chromium, copper, iron, lead magnesium, manganese, nickel, selenium, sodium and thallium were detected at total concentrations that exceeded NYSDEC AWQSGVs. However, when compared to their corresponding dissolved concentrations, only manganese and sodium were detected at concentrations in GW-01 that exceeded NYSDEC AWQSGVs.

#### **4.3.2 Groundwater Sample GW-02**

Soil boring SB-02 was advanced into groundwater, to a depth of 45 feet bgs using a hollow-stem auger and a temporary one-inch PVC monitoring well was installed. The depth to groundwater was recorded at 39.5 feet bgs. Using an inertial pump, at least three well volumes of groundwater were purged and groundwater sample GW-02 was collected.

As indicated in **Table 2** of **Attachment B**, no VOCs, pesticides or PCBs were detected in GW-02 above applicable NYSDEC AWQSGVs. One SVOC, benzo(b)fluoranthene, was detected at an estimated concentration of 0.02 micrograms per liter ( $\mu\text{g/L}$ ), which exceeds the NYSDEC

AWQSGV of 0.002 µg/L. In addition, the metals barium, beryllium, chromium, copper, iron, lead, magnesium, manganese, nickel, selenium, sodium and thallium were detected at total concentrations that exceeded NYSDEC AWQSGVs. However, when compared to their corresponding dissolved concentrations, only manganese and sodium were detected at concentrations in GW-02 that exceeded NYSDEC AWQSGVs.

### 4.3.3 Groundwater Sample GW-03

Groundwater sample GW-03 was collected from an existing monitoring well located in the sidewalk outside the northwestern boundary of the Site (see **Figure 3** of **Attachment A**). It is assumed the monitoring well was either installed for monitoring an off-site condition or as a geotechnical observation well. The groundwater well consisted of a two-inch PVC monitoring well and the total depth was measured to be 44.8 feet bgs. Depth-to-groundwater was recorded at 37.95 feet bgs. Prior to sampling, groundwater was purged using an inertial pump until turbidity was visibly reduced.

As indicated in **Table 2** of **Attachment B**, no SVOCs, pesticides or PCBs were detected in GW-03 above applicable NYSDEC AWQSGVs. One SVOC, tetrachloroethylene (PCE), was detected at a concentration of 5.8 ug/L, which exceeds the NYSDEC AWQSGV of 5 ug/L. In addition, the metals chromium, copper, iron, lead magnesium, manganese, nickel, sodium and thallium were detected at total concentrations that exceeded NYSDEC AWQSGVs. However, when compared to their corresponding dissolved concentrations, only sodium and thallium were detected at concentrations in GW-03 that exceeded NYSDEC AWQSGVs.

## 4.4 Soil Vapor Quality

As previously indicated, a soil vapor study was conducted at the Site in accordance with the NYCDEP-approved Work Plan to assess the potential for a VEC at the Site. Four (4) soil vapor samples were collected across the Site at the locations shown on **Figure 3** of **Attachment A**, the samples results are summarized in **Table 3** of **Attachment B**, and the complete laboratory data reports are included in **Attachment E**. A summary of soil vapor analytical data is provided in the sub-sections, below.

### 4.4.1 Soil Vapor Sample SV-01

As shown on **Figure 3** of **Attachment A**, soil vapor sample SV-01 was collected at the northwestern portion of the Site, within Lot 23, at a depth of approximately 13.5 feet bgs.

As indicated on **Table 3** in **Attachment B**, petroleum-related and other VOCs were detected including 1,3-butadiene, 2-butanone, 2,hexanone, 4-methyl-2-pentanone, acetone, benzene, carbon disulfide, cyclohexane, heptane, n-Hexane, xylenes, tert-butyl alcohol and toluene. No VOCs were detected above laboratory MDLs for compounds that are subject to the NYSDOH Soil Vapor/Indoor Air Matrices.

According to NYSDOH guidance, *because minor leakage around the probe seal should not materially affect the usability of the soil vapor sampling results, the mere presence of the tracer gas in the sample should not be cause for alarm... if high concentrations (>10%) of tracer gas*

are observed in a sample, the probe seal should be enhanced to reduce the infiltration of outdoor air. Helium (as a tracer gas) was not detected in sample SV-01. As such, soil vapor sample results for SV-01 should be considered valid and not influenced by outdoor air conditions.

#### 4.4.2 Soil Vapor Sample SV-02

As shown on **Figure 3 of Attachment A**, soil vapor sample SV-02 was collected from the central portion of the Site, along the southeastern portions of Lot 17 at a depth of approximately 13.5 feet bgs.

As indicated on **Table 3 in Attachment B**, petroleum-related and other VOCs were detected including 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2,2,4-trimethylpentane, chloromethane, 1,3-butadiene, 2-butanone, 2,hexanone, 4-methyl-2-pentanone, acetone, benzene, carbon disulfide, cyclohexane, dichlorodifluoromethane, ethyl alcohol, ethylbenzene, heptane, n-Hexane, xylenes, tert-butyl alcohol, tetrahydrofuran and toluene. In addition, the following compounds subject to the NYSDOH Soil Vapor/Indoor Air Matrices were detected in SV-02:

- › 1,1,1-Trichloroethane (111-TCA); subject to NYSDOH Soil Vapor/Indoor Air Matrix B
- › Methylene Chloride; subject to NYSDOH Soil Vapor/Indoor Air Matrix B
- › Tetrachloroethylene; subject to NYSDOH Soil Vapor/Indoor Air Matrix B

111-TCA was detected in SV-02 at a concentration of 2.01  $\mu\text{g}/\text{m}^3$ , methylene chloride was detected in SV-02 at a concentration of 7.4  $\mu\text{g}/\text{m}^3$  and PCE was detected in SV-02 at a concentration of 1.79  $\mu\text{g}/\text{m}^3$ . Based upon a review of NYSDOH Soil Vapor/Indoor Air Matrix B, NYSDOH recommends "No Further Action" for sub-slab concentrations less than 100  $\mu\text{g}/\text{m}^3$ .

#### 4.4.3 Soil Vapor Sample SV-03

As shown on **Figure 3 of Attachment A**, soil vapor sample SV-03 was collected from the eastern-central portion of the Site, on the central portion of Lot 50 at a depth of approximately 13.5 feet bgs.

As indicated on **Table 3 in Attachment B**, petroleum-related and other VOCs were detected including 1,2,4-trimethylbenzene, 1,3-butadiene, 2-butanone, acetone, benzene, carbon disulfide, cyclohexane, dichlorodifluoromethane, ethylbenzene, heptane, isopropyl alcohol, n-Hexane, xylenes, tert-butyl alcohol, toluene and trichlorofluoromethane. In addition, the following compound subject to the NYSDOH Soil Vapor/Indoor Air Matrices was detected in SV-02:

- › Methylene Chloride; subject to NYSDOH Soil Vapor/Indoor Air Matrix B

Methylene chloride was detected in SV-03 at a concentration of 7.78  $\mu\text{g}/\text{m}^3$ . Based upon a review of NYSDOH Soil Vapor/Indoor Air Matrix B, NYSDOH recommends "No Further Action" for sub-slab concentrations of methylene chloride that are less than 100  $\mu\text{g}/\text{m}^3$ .

#### 4.4.4 Soil Vapor Sample SV-04

As shown on **Figure 3 of Attachment A**, soil vapor sample SV-04 was collected from the southeastern portion of the Site, proximate to the central boundary of Lots 54 and 56 at a depth of approximately 13.5 feet bgs.

As indicated on **Table 3 in Attachment B**, petroleum-related and other VOCs were detected including 1,2,4-trimethylbenzene, 1,3-butadiene, 2-butanone, 2-hexanone, acetone, benzene, carbon disulfide, cyclohexane, dichlorodifluoromethane, ethylbenzene, heptane, n-Hexane, xylenes, tert-butyl alcohol and toluene. In addition, the following compounds subject to the NYSDOH matrices were detected in SV-03:

- › Methylene Chloride; NYSDOH Soil Vapor/Indoor Air Matrix B

Methylene chloride was detected in SV-03 at a concentration of 7.61  $\mu\text{g}/\text{m}^3$ . Based upon a review of NYSDOH Soil Vapor/Indoor Air Matrix B, NYSDOH recommends "No Further Action" for sub-slab concentrations less than 100  $\mu\text{g}/\text{m}^3$ .

### 4.5 Deviations from Work Plan/Site Constraints

#### Soil Samples

There were no significant deviations from the Work Plan with respect to soil samples. However, sample intervals and depths were adjusted based upon field conditions. Furthermore, additional mid-range samples were collected to further characterize historic/urban fill materials at the Site.

#### Groundwater Samples

There were no significant deviations from the Work Plan with respect to groundwater samples.

#### Soil Vapor Samples

There were no significant deviations from the Work Plan with respect to soil vapor samples.

# 5

## Conclusions

Based on the results of the subsurface investigation performed by VHB and its subcontractors at the Site, the following conclusions and associated recommendations are provided:

### **Soils**

There were no VOCs detected in soils above NYSDEC Part 375 Track One UUSCOs with the exception of xylenes, which were detected in one surficial soil sample, SB-02 (0-2'). There were no VOCs detected above NYSDEC Part 375 Track Two RRSCOs. The detection of xylenes in one soil sample can be considered an isolated occurrence due to the lack of any additional VOC detections above regulatory standards throughout the Site.

SVOCs were detected in the majority of the soil borings; primarily in shallow and mid-range soil samples. SVOC exceedances above NYSDEC Part 375 Track Two RRSCOs were detected in SB-01 (0-2'), SB-02 (5-7'), SB-03 (5-7'), SB-05 (0-2'), SB-06 (0-2'), SB-06 (2-4'), SB-07 (0-2') and SB-10 (0-2'). Additional SVOCs were also detected in those respective samples that exceeded NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. The widespread detection of the SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene and indeno(1,2,3-cd)pyrene are typical compounds found in historic/urban fill materials from previous site development. There were no detections of SVOCs above UUSCOs in the underlying native sand samples.

Metals were detected in several soil borings above NYSDEC Part 375 Track Two RRSCOs. These soil samples include SB-03 (5-7') (arsenic and lead) and SB-06 (2-4') (barium and lead). Additional metals were detected that exceeded NYSDEC Part 375 Track One UUSCOs but below Track Two RRSCOs. These samples included SB-01 (0-2') (copper, lead, mercury and zinc), SB-02 (15-17') (mercury), SB-03 (0-2') (lead and zinc), SB-03 (5-7') (copper and zinc), SB-05 (0-2') (copper, lead, mercury and zinc), SB-06 (0-2') (barium, lead, mercury and zinc), SB-06 (2-4') (copper, mercury and zinc), SB-07 (0-2') (lead), SB-09 (0-2') (barium, lead, mercury and zinc) and SB-11 (0-2') (lead and zinc). The presence of metals in surficial and mid-range soil samples can likely be attributed to the presence of contaminated historic/urban fill that was observed throughout the majority of the Site. Only one sample collected from the underlying native sands had a detection of metals above UUSCOs – mercury at SB-02 (15-17').

There were no pesticides detected above NYSDEC Part 375 Track Two RRSCOs. However, several soil samples, mainly surficial and mid-range, were identified with concentrations of pesticides that exceed NYSDEC Part 375 Track One UUSCOs. These soil samples include SB-01 (0-2') (4,4'-DDD, 4,4'-DDE, 4,4'-DDT and dieldrin), SB-02 (0-2') (4,4'-DDE and 4,4'-DDT), SB-02 (5-7') (4,4'-DDT), SB-03 (0-2') (4,4'-DDE, 4,4'-DDT and dieldrin), SB-03 (5-7') (4,4'-DDD, 4,4'-DDE, 4,4'-DDT and dieldrin), SB-05 (0-2') (4,4'-DDT), SB-06 (0-2') (4,4'-DDD, 4,4'-DDE, 4,4'-DDT and dieldrin), SB-06 (2-4') (4,4'-DDE, 4,4'-DDT and dieldrin), SB-08 (0-2') (4,4'-DDT) and SB-10 (0-2') (4,4'-DDT). The presence of pesticides can likely be attributed to contaminated urban/historic fill that was observed throughout the majority of the Site. Pesticides were not detected above the UUSCOs in any of the underlying native sand soil samples.

There were no concentrations of PCBs that exceeded NYSDEC Part 375 Track Two RRSCOs. However, total PCB concentrations in SB-01 (0-2') and SB-10 (4-6') were detected at concentrations that exceeded the NYSDEC Part 375 Track One UUSCO.

VHB recommends that soils within the project that will be excavated during site development be considered as *impaired* or *impacted*. Soils containing UUSCO and RRSCO exceedances within the redevelopment areas should properly be characterized prior to removal from the Site. Contaminated soils should be properly manifested and transported to an appropriate disposal facility capable of accepting soils impacted with VOCs, SVOCs, metals, pesticides and PCBs. Both the shallow and deeper soil horizons sampled during this investigation are proposed to be excavated as part of the future Site redevelopment. As an alternative, soils could also be transported to an alternate location that is capable of accepting and utilizing impacted backfill. These uses include many commercial, industrial and beneficial use facilities.

### **Groundwater**

Based upon the results of the groundwater sampling, there were no pesticides or PCBs detected above NYSDEC AWQSGVs. One VOC, PCE, was detected at a concentration of 5.8 µg/L in GW-03, which exceeds the NYSDEC AWQSGV of 5 µg/L. One SVOC,

benzo(b)fluoranthene, was detected but below the limit of quantitation in GW-02 at an estimated concentration 0.02 µg/L, which exceeds the NYSDEC AWQSGV of 0.002 µg/L. No additional VOCs or SVOCs were detected above NYSDEC AWQSGVs.

PCE was not detected in any of the on-Site groundwater or soil samples. As such, the detection of PCE in the off-Site groundwater monitoring well GW-03 is not likely related to current or former Site uses, but rather an off-Site source. The presence of the permanent off-Site groundwater monitoring well GW-03 suggests that it is used to monitor an off-site environmental or geotechnical condition.

Elevated total concentrations of metals could be attributed to high turbidity. Dissolved concentrations of manganese that exceed NYSDEC AWQSGV were detected in GW-01 and GW-02. The presence of manganese in groundwater is typical in New York City and can often be attributed to the dissolution of from surrounding minerals and leaching from soil. Manganese is also naturally occurring in groundwater that has little oxygen and where groundwater flow is considered slow. Dissolved concentrations of sodium were detected in all three groundwater samples (GW-01, GW-02 and GW-03) that exceeded the NYSDEC AWQSGV. The presence of dissolved sodium is also typical in New York City and can be attributed to the Site's proximity to the coast, as well as the leaching of dissolved rock salt utilized for snow melting in urban areas. Further, thallium was detected at an estimated dissolve concentration of 1.68 µg/L, which exceeds the NYSDEC AWQSGV of 0.5 µg/L in GW-03. There is no correlation between soil sample results and the presence of dissolved thallium detected in GW-03. The presence of thallium is typical of ore processing and manufacturing uses. Based upon the known historic use of the Site, it is likely the detection of thallium can be attributed to an off-Site source.

### **Soil Vapor**

Based upon the results of the soil vapor sampling, VOCs were detected at the screening depths within the project area. VOCs included 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 1,3-butadiene, 2,2,4-trimethylpentane, 2-butanone, 2-hexanone, 4-methyl-2-pentanone, acetone, benzene, carbon disulfide, chloromethane, cyclohexane, dichlorodifluoromethane, ethyl alcohol, ethylbenzene, heptane, isopropyl alcohol, n-hexane, xylenes, tert-butyl-alcohol, tetrahydrofuran, toluene and trichlorofluoromethane. Additional chlorinated VOCs subject to the NYSDOH Soil Vapor/Indoor Air matrices were detected including 111-TCA (SV-02 and SV-04), methylene chloride (SV-02, SV-03 and SV-04) and PCE (SV-02). Each of the compounds subject to NYSDOH matrices were subject to NYSDOH Soil Vapor/Indoor Air Matrix B and the maximum detection was reported at 9.88 µg/m<sup>3</sup>. Although no sub-slab soil vapor samples or indoor air samples were collected, the soil vapor results were compared to the NYSDOH Soil Vapor/Indoor Air Matrix B, NYSDOH recommends "No Further Action" for sub-slab concentrations less than 100 µg/m<sup>3</sup>.

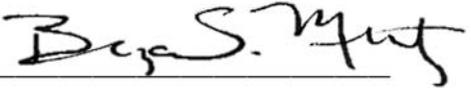

Given the presence of petroleum- and refrigerant-related VOCs in the soil vapor beneath the Site, as well as the presence of chlorinated VOCs subject to the NYSDOH Soil Vapor/Indoor Air Matrices including 111-TCA, PCE and methylene chloride, VHB recommends that soil vapor beneath the Site be considered as *impaired* or slightly *impacted*. The VOCs found in

soil vapor at the Site are typical throughout New York City including the borough of the Brooklyn, due to the extensive and dense development history. Given these conditions, VHB believes that no further action would be required with respect to soil vapor at this time. Furthermore, it is expected that the future development at the Site will include a building slab that will act as a barrier to protect future Site occupants from the impacted soil vapor beneath the Site, or as a conservative measure, a soil vapor barrier could be incorporated into the proposed Site development.

# **ATTACHMENT D – NYCDEP CORRESPONDENCE**

September 30, 2019

Callista Nazaire  
Director, Environmental Planning  
New York City Department of Housing Preservation and Development  
100 Gold Street  
New York, New York 10038

**Re:    Brownsville Site A – Rockaway/Chester  
      Block 3499, Lots 15, 17, 20-24, 45-48, 50, 52-54, 56-58  
      CEQR # 20HPD019K**

**Vincent Sapienza, P.E.**  
*Commissioner*

Dear Ms. Nazaire:

The New York City Department of Environmental Protection, Bureau of Sustainability (DEP) has reviewed the March 2019 Phase I Environmental Site Assessment (Phase I), the August 2019 Phase II Environmental Site Assessment Work Plan (Phase II Work Plan) and the August 2019 Project Health and Safety Plan (HASP) prepared by Vanasse Hangen Brustlin, Inc., (VHB), on behalf of Blue Sea Development Company LLC., (applicant). It is our understanding that the applicant is seeking:

1. The disposition of 18 contiguous city-owned lots located between Pitkin Avenue and East New York Avenue in the Brownsville neighborhood of Brooklyn Community District 16;
2. A zoning map amendment from the New York City Department of City Planning to rezone the project area from a R6/C2-4 zoning district to a R7A/C2-4 zoning district;
3. A zoning text amendment to Appendix F of the Zoning Resolution to designate the project site as a Mandatory Inclusionary Housing Area;
4. Project approval and designation of the project site as an Urban Development Action Area Project.

The proposed actions would facilitate the development of a new mixed-use building containing approximately 446 affordable housing units, community facility space as well as retail space. It should be noted that the project site is currently vegetated, undeveloped and is enclosed with a chain-link fence.

The March 2019 Phase I report revealed that historical on-site and surrounding area land-uses consists of residential and commercial uses including churches, an auto garage, Wholesale Wallpaper Company, a cabinet manufacturer, a furniture upholsterer, Crossroads Juvenile Center, Colonial Electric Supply, a beauty salon, a deli and grocery store, a drug clinic, auto repair shops, as well as several residential buildings. Regulatory databases such as the New York State Department of Environmental Conservation (NYSDEC) SPILLS, Leaking Storage Tanks (LTANKS), Resource Conservation and Recovery Act Generators, and Petroleum Bulk Storage (PBS) Underground Storage Tanks (USTs) and PBS Aboveground Storage Tanks (ASTs) identified several sites in close proximity to the project site. The SPILLS database reported 13 spills within a 1/8-mile radius of the project site, the PBS USTs and the PBS ASTs databases reported 15 USTs and 21 ASTs within a 1/4-mile radius of the project site and the LTANKS database reported 29

**Angela Licata**  
*Deputy Commissioner of Sustainability*

59-17 Junction Blvd.  
Flushing, NY 11373

Tel. (718) 595-4398  
Fax (718) 595-4422  
alicata@dep.nyc.gov

LTANKS within a 1/2-mile radius of the project site. The Phase I also reported two Historical Cleaners within a 1/8-mile radius of the project site.

The August 2019 Phase II Work Plan proposes to install eleven soil borings, three temporary groundwater monitoring wells and four soil vapor probes at the project site. Two soil samples will be collected from each boring; one surficial sample will be taken from the 0-2 feet below grade surface (bgs) interval or just below the grass mat/asphalt pavement and one deeper sample will be taken at the anticipated excavation depth (13-feet bgs) or at refusal, whichever is encountered first. Soil and groundwater samples will be analyzed for volatile organic compounds (VOCs) via United States Environmental Protection Agency (EPA) Method 8260, semi-volatile organic compounds via EPA Method 8270, pesticides via EPA Method 8081, polychlorinated biphenyls via EPA Method 8082 and Target Analyte List metals via EPA Methods 6010 and 7471 (filtered and unfiltered for groundwater samples). Four soil vapor samples will also be collected and analyzed for VOCs via EPA Method TO-15.

Based upon our review of the submitted documentation, we have the following comments/recommendations to HPD:

**Phase II Work Plan**

- HPD should instruct the applicant that two soil samples should be collected from each test boring, and the samples should be focused on any sections exhibiting evidence of contamination based on field screening. One surface soil sample should be collected from the upper two feet of soil (typically the 0-2 feet bgs interval) and one subsurface soil sample should be collected between 2 feet bgs and the maximum proposed excavation depth (based on visual/olfactory evidence of impacts and/or elevated soil screening readings obtained using accepted field instruments). If no evidence or elevated readings are noted during borehole advancement, the subsurface soil sample should be collected from the two foot interval below the proposed maximum excavation depth and/or the groundwater interface (whichever is encountered first).
- HPD should instruct the applicant that the proposed soil, groundwater and soil vapor sampling locations should also be individually labeled on Figure 3, Proposed Sample Locations Map (e.g. SB-1, GW-1, SV-1, etc.).

DEP finds the August 2019 Phase II Work Plan and HASP for the proposed investigation acceptable, as long as the aforementioned information is incorporated into the Phase II Work Plan. HPD should inform the applicant that upon completion of the investigation activities, the applicant should submit a detailed Phase II report to DEP for review and approval. The report should include, at a minimum, an executive summary, narrative of the field activities, laboratory data and conclusions, comparison of soil, groundwater, and soil vapor analytical results (i.e., NYSDEC 6 NYCRR Part 375, NYSDEC Water Quality Regulations, and New York State Department of Health's October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York), updated site plans depicting sample locations, boring logs, and remedial recommendations, if warranted.

Future correspondence and submittals related to this project should include the following CEQR # **20HPD019K**. If you have any questions, you may contact Ms. Cassandra Scantlebury at (718) 595-6756.

Sincerely,

Wei Yu

Deputy Director, Hazardous Materials

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

**Report Date:** 10/21/20

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

L2044058-05 and -08: At the client's request, the sample was not analyzed.

L2044058-06 and -07: At the client's request, the Dissolved Metals analysis was performed.

#### Semivolatile Organics

L2044058-01: The sample has elevated detection limits due to the dilution required by the sample matrix.

#### Total Metals

L2044058-01 through -04: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

L2044058-06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the prep dilution required by the sample matrix.

The WG1423029-1 Method Blank, associated with L2044058-01 through -04, has a concentration above the reporting limit for iron. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no corrective action is required.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

**Project Name:** BLUE SEA BACA PHASE II ESA  
**Project Number:** 26979.01

**Lab Number:** L2044058  
**Report Date:** 10/21/20

#### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

**Project Name:** BLUE SEA BACA PHASE II ESA  
**Project Number:** 26979.01

**Lab Number:** L2044058  
**Report Date:** 10/21/20

**Data Qualifiers**

the identification is based on a mass spectral library search.

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

The following analytes are not included in our Primary NELAP Scope of Accreditation:

### Westborough Facility

**EPA 624/624.1:** m/p-xylene, o-xylene, Naphthalene

**EPA 8260C:** NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

**EPA 8270D:** NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**SM4500:** NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

### Mansfield Facility

**SM 2540D:** TSS

**EPA 8082A:** NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene,

3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**EPA TO-12** Non-methane organics

**EPA 3C** Fixed gases

**Biological Tissue Matrix:** EPA 3050B

---

The following analytes are included in our Massachusetts DEP Scope of Accreditation

### Westborough Facility:

#### Drinking Water

**EPA 300.0:** Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

**EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

**EPA 332:** Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

**Report Date:** 10/22/20

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

---

**Project Name:** BLUE SEA BACA PHASE II ESA  
**Project Number:** 26979.01

**Lab Number:** L2044265  
**Report Date:** 10/22/20

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

L2044265-13: At the client's request, "TB-4" was not analyzed.

#### Semivolatile Organics

L2044265-04 and -07: The sample has elevated detection limits due to the dilution required by the sample matrix.

#### Pesticides

L2044265-01 and -08: The sample has elevated detection limits due to the dilution required by the sample matrix.

L2044265-08: The internal standard (IS) response for 1-bromo-2-nitrobenzene (668%) was above the acceptance criteria on column A; however, the sample was not re-analyzed due to obvious interferences. The surrogate recoveries are outside the method acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (0%) and decachlorobiphenyl (2%) due to interference with the Internal Standard.

#### Total Metals

L2044265-01 through -11: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

The WG1423819-1 Method Blank, associated with L2044265-01 through -11, has a concentration above the reporting limit for manganese. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no corrective action is required.

The WG1423819-3 MS recoveries for aluminum (1100%), calcium (802%), iron (0%), and manganese (0%), performed on L2044265-01, do not apply because the sample concentrations are greater than four times the

**Project Name:** BLUE SEA BACA PHASE II ESA  
**Project Number:** 26979.01

**Lab Number:** L2044265  
**Report Date:** 10/22/20

### Case Narrative (continued)

spike amounts added.

The WG1423819-3 MS recoveries, performed on L2044265-01, are outside the acceptance criteria for barium (154%), lead (16%), magnesium (133%), selenium (59%), sodium (136%), thallium (47%), and zinc (154%). A post digestion spike was performed and was within acceptance criteria.

The WG1423819-4 Laboratory Duplicate RPDs for barium (76%), cobalt (21%), iron (22%), manganese (77%), nickel (43%), and sodium (34%), performed on L2044265-01, are outside the acceptance criteria. The elevated RPDs have been attributed to the non-homogeneous nature of the native sample.

#### Dissolved Metals

L2044265-12: The sample has elevated detection limits for all elements, with the exception of mercury, due to the prep dilution required by the sample matrix.

The WG1424249-3 MS recovery for sodium (74%), performed on L2044265-12, does not apply because the sample concentration is greater than four times the spike amount added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

**Project Name:** BLUE SEA BACA PHASE II ESA  
**Project Number:** 26979.01

**Lab Number:** L2044265  
**Report Date:** 10/22/20

#### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: DU Report with 'J' Qualifiers

**Project Name:** BLUE SEA BACA PHASE II ESA  
**Project Number:** 26979.01

**Lab Number:** L2044265  
**Report Date:** 10/22/20

**Data Qualifiers**

the identification is based on a mass spectral library search.

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

### Westborough Facility

**EPA 624/624.1:** m/p-xylene, o-xylene, Naphthalene

**EPA 8260C:** NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

**EPA 8270D:** NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**SM4500:** NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

### Mansfield Facility

**SM 2540D:** TSS

**EPA 8082A:** NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**EPA TO-12** Non-methane organics

**EPA 3C** Fixed gases

**Biological Tissue Matrix:** EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

### Westborough Facility:

#### Drinking Water

**EPA 300.0:** Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE,**

**EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

**EPA 332:** Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

**Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.**

#### Non-Potable Water

**SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH:** Ammonia-N and Kjeldahl-N, **EPA 350.1:** Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300:** Chloride, Sulfate, Nitrate.

**EPA 624.1:** Volatile Halocarbons & Aromatics,

**EPA 608.3:** Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

**EPA 625.1:** SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

**Microbiology: SM9223B-Colilert-QT; Enterolert-QT, SM9221E, EPA 1600, EPA 1603.**

**Project Number:** 26979.01

**Lab Number:** L2043863  
**Report Date:** 10/20/20

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

L2043863-11: The collection date and time on the chain of custody was 13-OCT-20 13:05; however, the collection date/time on the container label was 13-OCT-20 13:15. At the client's request, the collection date/time is reported as 13-OCT-20 13:05.

L2043863-13: A sample identified as "TB-1" was listed on the Chain of Custody, but not received. This was verified by the client.

#### Total Metals

L2043863-01 through -12 and -14: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

**Project Name:** BLUE SEA BACA PHASE 11 ESH  
**Project Number:** 26979.01

**Lab Number:** L2043863  
**Report Date:** 10/20/20

#### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benzo(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

**Project Name:** BLUE SEA BACA PHASE 11 ESH  
**Project Number:** 26979.01

**Lab Number:** L2043863  
**Report Date:** 10/20/20

**Data Qualifiers**

the identification is based on a mass spectral library search.

- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

The following analytes are not included in our Primary NELAP Scope of Accreditation:

### Westborough Facility

**EPA 624/624.1:** m/p-xylene, o-xylene, Naphthalene

**EPA 8260C:** NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

**EPA 8270D:** NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**SM4500:** NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

### Mansfield Facility

**SM 2540D:** TSS

**EPA 8082A:** NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**EPA TO-12** Non-methane organics

**EPA 3C** Fixed gases

**Biological Tissue Matrix:** EPA 3050B

---

The following analytes are included in our Massachusetts DEP Scope of Accreditation

### Westborough Facility:

#### Drinking Water

**EPA 300.0:** Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

**EPA 332:** Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

**Microbiology:** **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.**

#### Non-Potable Water

**SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH:** Ammonia-N and Kjeldahl-N, **EPA 350.1:** Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300:** Chloride, Sulfate, Nitrate.

**EPA 624.1:** Volatile Halocarbons & Aromatics,

**EPA 608.3:** Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

**EPA 625.1:** SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

**Microbiology:** **SM9223B-Colilert-QT; Enterolert-QT, SM9221E, EPA 1600, EPA 1603.**

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

**HOLD POLICY** - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Revision

This report replaces the one previously issued on October 20, 2020. The report has been amended to report helium at the request of the client.

#### Volatile Organics in Air

Canisters were released from the laboratory on October 13, 2020. The canister certification results are provided as an addendum.

L2044045-01, -03 and -04: The samples have elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the samples.

#### Fixed Gases

L2044045-01 through -04: Prior to sample analysis, the canisters were pressurized with UHP Hydrogen in order to facilitate the transfer of sample to the Gas Chromatograph. The addition of Hydrogen resulted in a dilution of the sample. The reporting limits have been elevated accordingly.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)  Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

**Project Name:** BLUE SEA BACA PHASE 11 ESA  
**Project Number:** 26979.01

**Lab Number:** L2044045  
**Report Date:** 10/21/20

#### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

#### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

**Difference:** With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

**Final pH:** As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

**Frozen Date/Time:** With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

**Initial pH:** As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

**PAH Total:** With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benzo(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

**PFAS Total:** With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

#### Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the reporting limit (RL) for the sample.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.

Report Format: Data Usability Report

**Project Name:** BLUE SEA BACA PHASE 11 ESA  
**Project Number:** 26979.01

**Lab Number:** L2044045  
**Report Date:** 10/21/20

**Data Qualifiers**

- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

**Project Name:** BLUE SEA BACA PHASE 11 ESA  
**Project Number:** 26979.01

**Lab Number:** L2044045  
**Report Date:** 10/21/20

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

The following analytes are not included in our Primary NELAP Scope of Accreditation:

### Westborough Facility

**EPA 624/624.1:** m/p-xylene, o-xylene, Naphthalene

**EPA 8260C:** NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

**EPA 8270D:** NPW: Dimethylnaphthalene, 1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**SM4500:** NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

### Mansfield Facility

**SM 2540D:** TSS

**EPA 8082A:** NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**EPA TO-12** Non-methane organics

**EPA 3C** Fixed gases

**Biological Tissue Matrix:** EPA 3050B

# **ATTACHMENT G – NYSDOH SOIL VAPOR/INDOOR AIR MATRICES**

# Soil Vapor/Indoor Air Matrix A

May 2017

**Analytes Assigned:**

Trichloroethene (TCE), *cis*-1,2-Dichloroethene (c12-DCE), 1,1-Dichloroethene (11-DCE), Carbon Tetrachloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )		
	< 0.2	0.2 to < 1	1 and above
< 6	1. No further action	2. No Further Action	3. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
6 to < 60	4. No further action	5. MONITOR	6. MITIGATE
60 and above	7. MITIGATE	8. MITIGATE	9. MITIGATE

**No further action:** No additional actions are recommended to address human exposures.

**Identify Source(s) and Resample or Mitigate:** We recommend that reasonable and practical actions be taken to identify the source(s) affecting the indoor air quality and that actions be implemented to reduce indoor air concentrations to within background ranges. For example, if an indoor or outdoor air source is identified, we recommend the appropriate party implement actions to reduce the levels. In the event that indoor or outdoor sources are not readily identified or confirmed, resampling (which might include additional sub-slab vapor and indoor air sampling locations) is recommended to demonstrate that SVI mitigation actions are not needed. Based on the information available, mitigation might also be recommended when soil vapor intrusion cannot be ruled out.

**Monitor:** We recommend monitoring (sampling on a recurring basis), including but not necessarily limited to sub-slab vapor, basement air and outdoor air sampling, to determine whether concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences. Monitoring might also be recommended to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined based on site-, building- and analyte-specific information, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated.

**Mitigate:** We recommend mitigation to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.

**These general recommendations are made with consideration being given to the additional notes on page 2.**

## ADDITIONAL NOTES FOR MATRIX A

---

This matrix summarizes actions recommended to address current and potential exposures related to soil vapor intrusion. To use the matrix appropriately as a tool in the decision-making process, the following should be noted:

- [1] The matrix is generic. As such, it may be appropriate to modify a recommended action to accommodate analyte-specific, building-specific conditions (e.g., dirt floor in basement, crawl spaces, thick slabs, current occupancy, etc.), and/or factors provided in Section 3.2 of the guidance (e.g., current land use, environmental conditions, etc.). For example, collection of additional samples may be recommended when the matrix indicates "no further action" for a particular building, but the results of adjacent buildings (especially sub-slab vapor results) indicate a need to take actions to address exposures related to soil vapor intrusion. Mitigation might be recommended when the results of multiple contaminants indicate monitoring is recommended. Proactive actions may be proposed at any time. For example, the party implementing the actions may decide to install sub-slab depressurization systems on buildings where the matrix indicates "no further action" or "monitoring." Such an action might be undertaken for reasons other than public health (e.g., seeking community acceptance, reducing costs, etc.). However, actions implemented *in lieu* of sampling will typically be expected to be captured in the final engineering report and site management plan, and might not rule out the need for post-implementation sampling (e.g., to document effectiveness or to support terminating the action).
- [2] Actions provided in the matrix are specific to addressing human exposures. Implementation of these actions does not preclude investigating possible sources of soil vapor contamination, nor does it preclude remediating contaminated soil vapor or the source of soil vapor contamination.
- [3] Appropriate care should be taken during all aspects of sample collection to ensure that high quality data are obtained. Since the data are being used in the decision-making process, the laboratory analyzing the environmental samples must have current Environmental Laboratory Approval Program (ELAP) certification for the appropriate analyte and environmental matrix combinations. Furthermore, samples should be analyzed by methods that can achieve a minimum reporting limit of 0.20 microgram per cubic meter for indoor and outdoor air samples. For sub-slab vapor samples and dirt floor soil vapor samples, a minimum reporting limit of 1 microgram per cubic meter is recommended.
- [4] Sub-slab vapor and indoor air samples are typically collected when the likelihood of soil vapor intrusion is considered to be the greatest (i.e., worst-case conditions). If samples are collected at other times (typically, samples collected outside of the heating season), then resampling during worst-case conditions might be appropriate to verify that actions taken to address exposures related to soil vapor intrusion are protective of human health.
- [5] When current exposures are attributed to sources other than soil vapor intrusion, the agencies should be given documentation (e.g., applicable environmental data, completed indoor air sampling questionnaire, digital photographs, etc.) to support a proposed action other than that provided in the matrix box and to support agency assessment and follow-up.
- [6] The party responsible for implementing the recommended actions will differ depending upon several factors, including but not limited to the following: the identified source of the volatile chemicals, the environmental remediation program, and analyte-specific, site-specific and building-specific factors.

# Soil Vapor/Indoor Air Matrix B

May 2017

**Analytes Assigned:**

Tetrachloroethene (PCE), 1,1,1-Trichloroethane (111-TCA), Methylene Chloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )		
	< 3	3 to < 10	10 and above

For example, the party implementing the actions may decide to install sub-slab depressurization systems on buildings where the matrix indicates "no further action" or "monitoring." Such an action might be undertaken for reasons other than public health (e.g., seeking community acceptance, reducing costs, etc.). However, actions implemented *in lieu* of sampling will typically be expected to be captured in the final engineering report and site management plan, and might not rule out the need for post-implementation sampling (e.g., to document effectiveness or to support terminating the action).
- [2] Actions provided in the matrix are specific to addressing human exposures. Implementation of these actions does not preclude investigating possible sources of soil vapor contamination, nor does it preclude remediating contaminated soil vapor or the source of soil vapor contamination.
- [3] Appropriate care should be taken during all aspects of sample collection to ensure that high quality data are obtained. Since the data are being used in the decision-making process, the laboratory analyzing the environmental samples must have current Environmental Laboratory Approval Program (ELAP) certification for the appropriate analyte and environmental matrix combinations. Furthermore, samples should be analyzed by methods that can achieve a minimum reporting limit of 1 microgram per cubic meter for indoor and outdoor air samples. For sub-slab vapor samples and dirt floor soil vapor samples, a minimum reporting limit of 1 microgram per cubic meter is recommended.
- [4] Sub-slab vapor and indoor air samples are typically collected when the likelihood of soil vapor intrusion is considered to be the greatest (i.e., worst-case conditions). If samples are collected at other times (typically, samples collected outside of the heating season), then resampling during worst-case conditions might be appropriate to verify that actions taken to address exposures related to soil vapor intrusion are protective of human health.
- [5] When current exposures are attributed to sources other than soil vapor intrusion, the agencies should be given documentation (e.g., applicable environmental data, completed indoor air sampling questionnaire, digital photographs, etc.) to support a proposed action other than that provided in the matrix box and to support agency assessment and follow-up.
- [6] The party responsible for implementing the recommended actions will differ depending upon several factors, including but not limited to the following: the identified source of the volatile chemicals, the environmental remediation program, and analyte-specific, site-specific and building-specific factors.

# Soil Vapor/Indoor Air Matrix C

May 2017

**Analytes Assigned:**

Vinyl Chloride

SUB-SLAB VAPOR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )	INDOOR AIR CONCENTRATION of COMPOUND (mcg/m <sup>3</sup> )	
	< 0.2	0.2 and above
< 6	1. No further action	2. IDENTIFY SOURCE(S) and RESAMPLE or MITIGATE
6 to < 60	3. MONITOR	4. MITIGATE
60 and above	5. MITIGATE	6. MITIGATE

**No further action:** No additional actions are recommended to address human exposures.

**Identify Source(s) and Resample or Mitigate:** We recommend that reasonable and practical actions be taken to identify the source(s) affecting the indoor air quality and that actions be implemented to reduce indoor air concentrations to within background ranges. For example, if an indoor or outdoor air source is identified, we recommend the appropriate party implement actions to reduce the levels. In the event that indoor or outdoor sources are not readily identified or confirmed, resampling (which might include additional sub-slab vapor and indoor air sampling locations) is recommended to demonstrate that SVI mitigation actions are not needed. Based on the information available, mitigation might also be recommended when soil vapor intrusion cannot be ruled out.

**Monitor:** We recommend monitoring (sampling on a recurring basis), including but not necessarily limited to sub-slab vapor, basement air and outdoor air sampling, to determine whether concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences. Monitoring might also be recommended to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined based on site-, building- and analyte-specific information, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated.

**Mitigate:** We recommend mitigation to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporary measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.

These general recommendations are made with consideration being given to the additional notes on page 2.

## ADDITIONAL NOTES FOR MATRIX C

---

This matrix summarizes actions recommended to address current and potential exposures related to soil vapor intrusion. To use the matrix appropriately as a tool in the decision-making process, the following should be noted:

- [1] The matrix is generic. As such, it may be appropriate to modify a recommended action to accommodate analyte-specific, building-specific conditions (e.g., dirt floor in basement, crawl spaces, thick slabs, current occupancy, etc.), and/or factors provided in Section 3.2 of the guidance (e.g., current land use, environmental conditions, etc.). For example, collection of additional samples may be recommended when the matrix indicates "no further action" for a particular building, but the results of adjacent buildings (especially sub-slab vapor results) indicate a need to take actions to address exposures related to soil vapor intrusion. Mitigation might be recommended when the results of multiple contaminants indicate monitoring is recommended. Proactive actions may be proposed at any time. For example, the party implementing the actions may decide to install sub-slab depressurization systems on buildings where the matrix indicates "no further action" or "monitoring." Such an action might be undertaken for reasons other than public health (e.g., seeking community acceptance, reducing costs, etc.). However, actions implemented *in lieu* of sampling will typically be expected to be captured in the final engineering report and site management plan, and might not rule out the need for post-implementation sampling (e.g., to document effectiveness or to support terminating the action).
- [2] Actions provided in the matrix are specific to addressing human exposures. Implementation of these actions does not preclude investigating possible sources of soil vapor contamination, nor does it preclude remediating contaminated soil vapor or the source of soil vapor contamination.
- [3] Appropriate care should be taken during all aspects of sample collection to ensure that high quality data are obtained. Since the data are being used in the decision-making process, the laboratory analyzing the environmental samples must have current Environmental Laboratory Approval Program (ELAP) certification for the appropriate analyte and environmental matrix combinations. Furthermore, samples should be analyzed by methods that can achieve a minimum reporting limit of 0.20 microgram per cubic meter for indoor and outdoor air samples. For sub-slab vapor samples and dirt floor soil vapor samples, a minimum reporting limit of 1 microgram per cubic meter is recommended.
- [4] Sub-slab vapor and indoor air samples are typically collected when the likelihood of soil vapor intrusion is considered to be the greatest (i.e., worst-case conditions). If samples are collected at other times (typically, samples collected outside of the heating season), then resampling during worst-case conditions might be appropriate to verify that actions taken to address exposures related to soil vapor intrusion are protective of human health.
- [5] When current exposures are attributed to sources other than soil vapor intrusion, the agencies should be given documentation (e.g., applicable environmental data, completed indoor air sampling questionnaire, digital photographs, etc.) to support a proposed action other than that provided in the matrix box and to support agency assessment and follow-up.
- [6] The party responsible for implementing the recommended actions will differ depending upon several factors, including but not limited to the following: the identified source of the volatile chemicals, the environmental remediation program, and analyte-specific, site-specific and building-specific factors.

# **ATTACHMENT H – PREPARER INFORMATION**

# George William Lester, PE

Senior Project Engineer

## Education

MS, Civil and Environmental Engineering, University of Vermont, 2013

BS, Civil Engineering, University of Vermont, 2011

## Registrations/Certifications

Professional Engineer PA, 2020

Professional Engineer NC, 2019

Professional Engineer NY, 2017

Professional Engineer VT, 2016

OSHA 10-Hour Construction Safety and Health Certificate

OSHA 40-Hour Hazwoper Certificate, 2015

OSHA 8- Hour Hazwoper Refresher Certificate, 2018

George has civil and environmental engineering experience focused primarily on groundwater remediation and stormwater management, with experience in geotechnical analysis and civil design. He has performed the design, implementation, operation, and monitoring of soil, soil gas, and groundwater remediation systems sites. Additionally, George has worked on stormwater treatment systems as well as residential and commercial development projects from the project planning phase through construction completion. George is a licensed Professional Engineer in New York, North Carolina, Pennsylvania, and Vermont.

## Groundwater Extraction and Treatment System Construction, Operation, Maintenance, and Monitoring – New York

Performed construction oversight tasks for the construction of a Waterloo Barrier®, engineered soil cap and the and the groundwater extraction and treatment system at a chlorinated solvent site in New York state. The Waterloo Barrier® encompasses approximately 2.6 acres ranging in depth from 35 to 55 feet below grade. The engineered soil cap was constructed with over 6000 cubic yards of imported low permeability clay, fill, and topsoil. He continues to oversee the operation, maintenance, and monitoring of the groundwater extraction and treatment system including monitoring for compliance of air and water discharge regulations and verification of the system performance goals.

## Sub-Slab Depressurization System Design Construction, Operation, Maintenance, and Monitoring – New York

Completed the design and construction of a sub-slab depressurization system for a former manufacturing facility in Rockland County, New York. Responsibilities included pre-design testing, design report, and installation of the system. After successful construction, the system was started and optimized to insure adequate capture of the sub-slab soil gas. Ongoing work includes confirmation sampling, preparation of a Final Engineering Report and Site Management Plan for New York State.

## Groundwater Extraction and Treatment System Construction, Operation, Maintenance, and Monitoring – North Carolina

Oversees the operation, maintenance, and monitoring of a groundwater extraction and treatment system at a former industrial site in North Carolina. He conducts routine engineering inspections, ongoing preventative and unplanned equipment maintenance, continuous treatment system optimization, and reporting to NCDEQ.

## Pine Street Canal Superfund Site, Compliance Monitoring Activities, Burlington, VT

Manages the ongoing long-term monitoring and operation and maintenance activities at the Pine Street Canal Superfund Site. Prepared and executed additional investigations including soil borings, profiling, monitoring well installation, and field sampling of sediment, surface water, and pore water in order to verify compliance with the project Remedial Action Objectives. Provides ongoing technical guidance do the performing defendant group.

## Bryan Murty

Senior Project Manager

**Bryan Murty manages and conducts Phase I and Phase II Environmental Site Assessments. In addition, Bryan performs various environmental services including soil vapor sampling/ambient air quality analysis, design, oversight and technical support of small and large-scale remediation projects, as well as noise studies. Bryan also participates in various environmental planning activities, including preparation of Draft and Final Environmental Impact Statements.**

### Education

BA, Environmental Sciences,  
State University of New York  
at Binghamton, 2005

### Registrations/ Certifications

New York City Office of  
Environmental Remediation  
Gold Certified Professional  
(Brownfield Industry), 2015

OSHA Certified Hazardous  
Waste Health and Safety  
Operator (OSHA 1910.120),  
2006

OSHA Construction Safety  
and Health Certificate (10-  
Hour), 2012

### *11 years of professional experience*

#### **United States Armed Forces Reserve Center/Nike Missile Base, Amityville, NY**

Bryan performed Phase I and Phase II Environmental Site Assessments for the closure and redevelopment of the former United States Armed Forces Reserve Center and Nike Missile Base located in Amityville, New York. He evaluated all environmental conditions at the property including sub-slab soil vapor and ambient air quality analyses, multi-depth soil sampling, underground injection control (UIC), as well as groundwater and wastewater sampling within abandoned missile silos. (\$50K)

#### **Polytechnic Institute of New York University, Brooklyn, NY**

Bryan assisted in the design and implementation of a large-scale groundwater remediation system associated with a former leaking underground storage tank located at the Polytechnic Institute in Brooklyn. The groundwater remediation system is designed to collect and capture contaminated groundwater and recover product floating on the groundwater table. In order to achieve this, Bryan coordinated with various additional team consultants in order to gather information needed to produce a New York State Department of Environmental Conservation-approved remedial action work plan. (\$50K)

#### **Nassau Board of Cooperative Educational Services (BOCES) Career Preparatory High School, Westbury, NY**

Bryan provided consulting services including a review of adjacent industrial and former Superfund sites within the surrounding properties. Bryan also conducts sub-slab soil vapor and indoor air monitoring in accordance with New York State Department of Health (NYSDOH) protocols in order to ensure surrounding industrial properties are not adversely affecting the school. (\$25K)

#### **Taystee Bakery, West Harlem, NY**

Bryan performed Phase I and Phase II ESAs for the redevelopment of a block of vacant buildings located in West Harlem that were formerly utilized as a commercial bakery. Bryan also corresponded with the NYSDEC for closure of an on-site spill, and created a New York City Office of Environmental Remediation (NYCOER)-approved Work Plan for the remediation of the property that is scheduled to be implemented in the coming year. (\$12K)

#### **The Riverwalk Redevelopment, Patchogue, NY**

Bryan assisted in the preparation of Phase I and Phase II Environmental Site Assessments, as well as the facility closure (including soil, groundwater, UIC analysis and

## Bryan Murty

underground storage tank removal) of the former Clare Rose beverage distribution center in Patchogue, New York for redevelopment into market rate condominiums.

### **Costco Redevelopment, Hicksville, NY**

Bryan prepared Phase I and Phase II Environmental Site Assessments and assisted in preparation of the revised FEIS for the redevelopment of the property at West John Street and Charlotte Avenue.

### **New York City Phase I ESA Experience, New York, NY**

Bryan has prepared numerous Phase I Environmental Site Assessments throughout the five boroughs for such projects as the Tastyee Bakery Site near Columbia University; Jewish Home Lifecare on the Upper West Side; 7 World Trade Center in Manhattan; Bossert Hotel in Brooklyn; Attorney Street in Manhattan; Park Lane Hotel, the former Helmsley Hotel, in Manhattan; and many others. As a result of the research for these projects and the coordination with environmental agencies, Bryan understands New York City environmental issues, the regulations governing these issues, and the remediation protocols.

### **T.C. Dunham Paint Company, Yonkers, NY**

Bryan provided consulting services including emergency response, and production and oversight of an approved remedial action work plan associated with a 4-alarm paint warehouse fire that impacted a large area in Yonkers. He teamed with various consultants and coordinated with various regulatory agencies, including the City of Yonkers, New York State Department of Environmental Conservation and the United States Environmental Protection Agency to generate various approved documents including a remedial action work plan, health and safety plan (HASP) and community air monitoring program (CAMP) plan.

### **Former Bay Shore Armory, Bay Shore, NY**

Bryan performed a Phase II Environmental Site Assessment for the re-use and redevelopment of the former New York State Armory property. He coordinated with sub-contractors and provided field oversight for a geophysical survey, the sampling from several large leaching fields, abandoned underground structures including vehicle lifts, tanks and an oil/water separator.

### **Queen of Peace Cemetery and Residential Subdivision, Old Westbury, NY**

Bryan prepared the FEIS for the development of a cemetery for the Diocese of Rockville Centre.

### **Nassau Coliseum Redevelopment, Lighthouse at Long Island, Uniondale, NY**

Bryan assisted in preparation of the DGEIS for the redevelopment of the existing Nassau County Veterans Memorial Coliseum to a multi-use entertainment and residential complex in the Town of Hempstead.

### **EIS for Heartland Town Square Redevelopment, Brentwood, NY**

Bryan assisted in preparation of the EIS for the rezoning and redevelopment of the 475± acre former Pilgrim Psychiatric Center as a Smart Growth Community.

**Sheltair Aviation, Republic Airport, Farmingdale, NY**

Bryan assisted in preparation of the Hazardous Materials section of DEIS for proposed redevelopment and improvement of a former residential subdivision as a private jet terminal.

**Pulte Homes, Courthouse Commons, Central Islip, NY**

Bryan prepared Phase I and Phase II Environmental Site Assessment and assisted in the monitoring of a large-scale remediation of a landfill at the former Central Islip Psychiatric Facility under the direction of the Suffolk County Department of Health Services and the New York State Department of Environmental Conservation for the ultimate redevelopment of the property as a residential condominium complex. (\$125K)

**Lowe's Home Centers, Various Nassau County and Suffolk County Sites, NY**

Bryan prepared Phase I and Phase II Environmental Site Assessments for several Lowe's stores throughout Long Island.

**Verizon Wireless Phase I & Phase II Environmental Site Assessments, Various Locations, NY**

Bryan has performed over 60 Phase I and/or Phase II Environmental Site Assessments (ESA) in the five boroughs and over 200 in various locations in New York for Verizon Wireless' service expansion. He supports Phase II ESAs by performing soil sampling, groundwater investigations/monitoring and soil vapor monitoring, and also provides remedial investigation support.

**PANYNJ Passenger Facility Charge, Newark, NJ, New York, NY, New Windsor, NY**

Bryan assisted in developing and administering the 2010 PFC application for the Port Authority of New York and New Jersey for Newark Liberty International Airport, John F. Kennedy International Airport, LaGuardia Airport and Stewart International Airport. This application includes \$570 million in capital development projects that incorporate terminal expansion, runway and taxiway pavement rehabilitation and security enhancements. Working with Port Authority staff, assisted in developing each project description justification through detailed meetings with a variety of Port Authority staff (technical services, accounting, planning) throughout the agency. The application received considerable support by the airlines and worked diligently with Port Authority staff and the FAA to the eventual approval of the application.

**Country Point at Plainview, Plainview, NY**

Bryan conducted a Phase I Environmental Site Assessment on the former Nassau County Sanatorium and associated recreational playing fields in Plainview, New York. He used this information to provide integrated services and incorporated some into a Draft Environmental Impact Statement to analyze existing conditions, potential impacts and mitigation measures associated with the redevelopment of the former Nassau County Sanatorium to a multi-family residential subdivision.
