EXECUTIVE SUMMARY

Ecosystems Strategies, Inc. (ESI) has performed a Combined Phase I and II Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E 1527-13 of the property located at 178-182 Main Street and 11 South Bridge Street, City of Poughkeepsie, Dutchess County, New York.

The goal of a Combined Phase I and II ESA is to identify Recognized Environmental Conditions (RECs) in connection with a property. In addition to RECs, ESI has attempted to identify:

1. Conditions that do not meet the threshold to be considered a REC but nonetheless represent a significant existing and/or likely environmental liability; and,
2. De minimis conditions that generally do not present a significant threat and would not be the subject of an enforcement action if brought to the attention of regulatory authorities.

ESI's findings, conclusions and recommendations are presented in Section 5.0 of this Combined Phase I and II ESA and are summarized below.

Subject Property Description and History

The subject property is a 0.61-acre vacant parcel located in an urban setting. The subject property is likely to have been used for commercial and residential purposes from as early as 1887 until the early to mid-1980s when all former on-site structures were demolished. Laboratory data generated during the Phase II portion of this investigation indicate that petroleum contaminated soils are located at the northeastern portion of the property and that metals and pesticide contamination is present in soil and fill/debris materials. The source of the documented soil contamination may be from historical manufacturing operations or other commercial uses, or may be related to debris from the demolition of former on-site structures (identified in test pits extended throughout the Site). Debris materials may contain lead based paint, asbestos, or other regulated materials. Current use of the property as a park is not likely to have impacted the subject property.

No further investigation of historical records is recommended. Any future development activities at the property should be conducted with an awareness of the presence of subsurface debris and provision should be made for the proper management of any materials that warrant special handling.

Recognized Environmental Conditions

| RECs Identified in Connection with the Subject Property | Recommendations |
|--|---|
| Documented petroleum contamination at the northeastern portion of the property (and associated open NYSDEC spill event) | Conduct additional investigation following a NYSDEC approved work plan; remediate petroleum contaminated soils as required |
| Presence of urban fill materials to various depths, documented metals contamination throughout the property and pesticide contamination at the north-central portion | Conduct additional investigation; manage any regulated materials in accordance with applicable regulations (may be conducted in conjunction with the spill investigation) |
| Potential impacts from releases at adjoining properties | Conduct additional investigation (may be conducted in conjunction with the above recommended investigations) |

Historical RECs (HRECs) and/or Other Relevant Environmental Liabilities

ESI has identified no HRECs or conditions indicating significant existing or relevant environmental liabilities (not addressed above).

De Minimis Conditions

| Identified or Suspect Condition | Recommendations |
|---|--|
| Scattered garbage located throughout the property | Segregate debris materials into appropriate waste streams and dispose of off-site |
| Elevated radon concentrations | Conduct radon testing in the event of future residential development on the property |

1.0 INTRODUCTION

1.1 Purpose of the Investigation

This Combined Phase I and II Environmental Site Assessment (Combined Phase I and II ESA) identifies recognized environmental conditions (RECs) and/or other significant environmental liabilities resulting from or associated with the storage, use, transport, or disposal of hazardous or regulated materials on the property located at 178-182 Main Street and 11 South Bridge Street, City of Poughkeepsie, Dutchess County, New York (property descriptions are presented in Sections 2.1 and 3.3.2).

1.2 Methodology

Phase I ESA services have been performed in conformance with guidelines set forth by the American Society for Testing and Materials (ASTM) Method E1527-13 (no exceptions to or deletions from this practice have occurred). Fieldwork services were performed in accordance with generally accepted practices and established New York State Department of Environmental Conservation (NYSDEC) protocols. The detailed Scope of Services adhered to in this investigation is provided as Appendix H. This Environmental Site Assessment was performed under the direct supervision and responsible charge of a qualified environmental professional (see Appendix I), following the requirements for “all appropriate inquiry” as defined in 40 CFR Part 312.

Ecosystems Strategies, Inc. (ESI) performed the following work:

1. Investigation of the subject property’s history and characteristics through the analysis of available historical maps, local and regional maps, local governmental and/or Tribal records, and information provided by subject property representatives and other knowledgeable individuals (see Section 6.0 for references).
2. Review of Federal, State, and/or Tribal regulatory-agency computer databases and printed records for documentation of potential environmental liabilities relevant to the property, consistent with (or exceeding) applicable ASTM requirements.
3. Inspection of the property by Tyler Goodnough of ESI on May 1, 2015.
4. Investigation of subsurface conditions at the subject property on May 26, 2015, conducted at the request of the Client.

1.3 Limitations

This Combined Phase I and II ESA is an evaluation of the property described in Section 2.1 below and is not valid for any other property or location. It is a representation of the property analyzed as of the dates that services were provided. This Combined Phase I and II ESA cannot be held accountable for activities or events resulting in environmental liability after the respective dates of the site inspection or historical and regulatory research.

This Combined Phase I and II ESA is based in part on certain information provided in writing or verbally by federal, state, and local officials (including public records) and other parties referenced herein. The accuracy or completeness of this information was not independently verified. Unless specifically noted, the findings and conclusions contained herein must be considered not as scientific certainties, but as probabilities based on professional judgment.

1.4 Definitions

Definitions of some common terms found in ASTM Standard 1527-13, as used in this Combined Phase I and II ESA, are provided below.

Key Site Manager

The person identified by the owner or operator of a property as having good knowledge of the uses and physical characteristics of the property.

Practically Reviewable / Reasonably Ascertainable

Information that is provided by a source in a manner and in a form that yields information relevant to the property without the need for extraordinary analysis of irrelevant data is Practically Reviewable. Records must be for a limited geographic area. Records arranged chronologically, lacking adequate address information to be located geographically, in large databases that are not sorted by zip code, or are so numerous to be unmanageable are not generally practically reviewable (i.e. data cannot be feasibly reviewed for its impact on the property). Information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable is Reasonably Ascertainable.

Recognized Environmental Condition (REC)

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

A material threat is a physically observable or obvious threat which is reasonably likely to lead to a release that is threatening and might result in impact to public health or the environment.

The term includes hazardous substances or petroleum products even under conditions in compliance with laws.

De minimis conditions (i.e. conditions that generally do not present a threat to human health or the environment and would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies) are not RECs.

Controlled Recognized Environmental Condition (CREC)

A REC resulting from a past release that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (legal or physical restrictions or limitations on the use of, or access to, a site or facility to reduce or eliminate potential exposure to remaining contaminants, or to prevent activities that could interfere with the effectiveness of a response action).

Historical Recognized Environmental Condition (HREC)

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

2.0 SITE LOCATION AND DESCRIPTION

2.1 Description of the Subject Property

The subject property as defined in this Combined Phase I and II ESA consists of the 0.61-acre property (known as the Poughkeepsie Main Loft Project) located at 178-182 Main Street and 11 South Bridge Street, City of Poughkeepsie, Dutchess County, New York (identified as City of Poughkeepsie tax lot parcels: Section 6062, Block 76, Lots 942131 & 945130, and Block 84, Lot 941112). A Site Location Map is provided on Page 7.

The property is an irregularly-shaped, vacant parcel located on the southern side of Main Street and the eastern side of South Bridge Street. A map illustrating the layout of the property is provided on Page 8 and photographs of the property are provided in Appendix A.

2.1.1 Site Topography

Information on the subject property's topography was obtained from the review of the United States Geological Survey Topographic Map of the Poughkeepsie, New York Quadrangle (a copy of the relevant portion of this map, with the subject property indicated, is provided in Appendix B).

The property is located within an area having moderate downward slopes to the west, towards the Hudson River. The property is shown with surface elevations that range from approximately 140 feet above mean sea level (msl) at the eastern portion of the property to approximately 125 feet above msl at the western portion. No on-site structures are depicted on the map (the property is located in an urban area where only selected landmark buildings are depicted). The map did not indicate the presence of any soil/gravel mining operations or unusual topographic patterns indicative of landfilling activities on the subject property.

Observations made during the site inspection are in general agreement with conditions depicted on the topographic map.

2.1.2 Site Geology

A review of the Geologic Map of New York and the Surficial Geologic Map of New York (lower Hudson sheets) indicates that soils on the subject property are likely to be derived from glacial till deposits, overlying the Austin Glen Formation, which consists of greywacke and shale. Soil maps presented in the USDA NRCS Soil Survey of Dutchess County, New York (Soil Survey), indicate that the Udorthents, smooth (0-8% slopes) soil series is likely to be located on the property. The Udorthents designation is provided for areas where excavation and regrading activities have likely occurred, and generally consists of well-drained, gently sloping soils. The presence of former on-site structures, and the Udorthents soil type designation, suggest that soils located on the property have been altered by cutting, regrading and/or filling activities.

Subsurface soils exposed during the extension of test pits (see Section 4.0) at the eastern and central portions of the subject property were noted to consist of brown, fine to medium sands overlying dense, brown to black, moist loamy clay with organic odor. Soils encountered in test pits extended at the western portions of the Site consisted of brown to gray, variable texture sands overlying brown to dark brown, moist loamy clay. Depth to bedrock in Udorthents soils is likely to be greater than 80 inches below surface grade (bsg). No bedrock was observed during the extension of test pits to a maximum depth of 12 feet bsg on the property.

No other information regarding site-specific investigations of the subsurface (e.g., test pits or borings) has been reviewed by this office.

2.1.3 Subsurface Hydrogeology

The Soil Survey notes a generalized groundwater depth of 36 to 72 inches in Udorthents soils. Shallow groundwater flow in the vicinity of the property is likely to follow overall surficial topography and be in a westerly direction, toward the Hudson River (located 0.43-mile from the property).

Groundwater was encountered between 10 and 12 feet bsg during the extension of test pits at the northeastern portion of the subject property (see Section 4.0) No other data documenting groundwater depth, or site-specific investigation of groundwater direction of flow, has been reviewed by this office.

2.1.4 Surface Hydrology and Wetlands

On-Site Waterbodies and Wet Areas

No waterbodies or wet areas were observed on the subject property or in the immediate vicinity during the site inspection.

Regulated Wetlands

Applicable NYSDEC and United States Department of the Interior wetlands mapping data was reviewed in order to determine the presence or absence of regulated wetlands on or in the immediate vicinity of the subject property. According to these sources, there are no surface waterbodies, wet areas, or regulated wetlands on the property. State wetlands data indicate that a classified stream (the Falkkill) is located approximately 0.3-mile to the north of the property and that the Hudson River is located 0.43-mile to the west of the property. Relevant federal and state mapping data are included in Appendix B.

2.1.5 Sensitive Environmental Receptors

Sensitive Environmental Receptors (SERs) are valued physical, biological and/or man-made features that may be adversely impacted by environmental contamination, and where a discharge or release could pose a greater threat than a discharge or release to other less valued areas. SERs include (but are not limited to) potable supply wells, wetlands, and protected wildlife habitat.

No SERs are located on or in the immediate vicinity of the subject property.

2.2 Description of Adjoining and Surrounding Area Properties

The subject property is located in an urban area comprised primarily of residential and commercial properties. A description of the adjoining and nearby properties is provided in Table 1, below.

Table 1: Land Uses in the Vicinity of the Subject Property

| Direction | Adjoining Use(s) | Vicinity Use(s) |
|-----------|---|--|
| North | • Commercial offices | • Residential • Commercial |
| East | • Multi-family residential | • Mixed-use commercial/residential |
| South | • Vacant building | • Single- and Multi-family residential |
| West | • Multi-family residential • Parking lot | • Residential • Commercial |

3.0 INVESTIGATION

3.1 Site History

The history of the subject property was researched using reviews of ownership records, historical maps, and local records. This review included both standard ASTM environmental record sources and additional sources (if such sources were judged to be reasonably ascertainable and sufficiently useful, accurate, and complete in light of the objective of the records review). Refer to Sections 3.1.3, 3.1.4 and 3.3.2.1 for site ownership and site use information.

ASTM Practice E 1527-13 requires that all obvious uses of the property must be identified from the present back to the property's first developed use (inclusive of agricultural activities), or back to 1940, whichever is earlier. This requires reviewing only as many historical sources as are necessary and both reasonably ascertainable and likely to be useful. As an example, if the property was not developed until 1960, it would still be necessary to attempt to confirm that it was undeveloped back to 1940.

The earliest reasonably ascertainable historical records document that the subject property was in use for residential and commercial purposes as early as 1887 (see Sections 3.1.1 through 3.1.5, below, for details regarding site history).

3.1.1 User-Reported Information

ASTM Practice E 1527-13, Section 6, requires that the User (the party seeking to complete the environmental site assessment of the property) provide specific information to the Environmental Professional in order to meet the requirements for "all appropriate inquiry". Representatives of the User (The Kearney Realty & Development Group) have not responded to a questionnaire provided by ESI, which requested information regarding the subject property as specified in Section 6.

Representatives of the User did not state the reason why the Combined Phase I and II ESA was performed, and ESI therefore assumes that the reason is to qualify for one or more Landowner Liability Protections (LLPs) to CERCLA liability and to document potential environmental liabilities on the subject property.

3.1.2 Interview with Key Site Manager

No Key Site Manager for the subject property was identified. Based on other known information regarding the subject property, it is ESI's opinion that the inability to identify and interview a Key Site Manager does not represent a significant data gap.

3.1.3 Ownership Records

Property ownership information, based on a review of City of Poughkeepsie Assessor's Office records, is presented in Table 2, below. This ownership summary does not constitute a title search.

Table 2: Ownership Information

| Parcel ID | Owner | Date of Conveyance |
|------------|---|--------------------|
| Lot 942131 | P U R A | 2/24/1977 |
| Lot 945130 | P U R A Levine, Nathan c/o Herman Levine | N/A N/A |
| Lot 941122 | Poughkeepsie Urban Renewal Elmo, William & Helen | 11/1976 1946 |

3.1.4 Sanborn Fire Insurance Maps and City Directories

Sanborn Fire Insurance Maps

A summary of the information obtained from the review of historical Sanborn Fire Insurance Company Maps dated 1887, 1895, 1913, 1950, 1952, 1984, and 1990 is provided below. Copies of relevant Sanborn maps are provided in Appendix C (note: subject property outlines on these maps, as drawn by ESI, may vary depending on map accuracy, and are approximations chosen to best reflect likely on-site historical uses).

- 1887: Municipal water is depicted as being available to the property. No petroleum or chemical bulk storage tanks are noted on the subject property, adjoining properties, or in the surrounding area. The subject property is developed with numerous light commercial row structures (including a blacksmith, retail stores and a greenhouse), two dwellings, and several outbuildings. Adjoining structures to the west and south contain dwellings and saloons. The eastern adjoining property contains the “Dunwoody Bro’s Soap” manufacturing facility, while the northern adjoining property across Main Street contains the “Van Wyck and Collins Marble Works” and several small light commercial row structures. The surrounding areas in all directions are well developed with residential and commercial properties, including several large commercial and manufacturing facilities to the north and northwest.
- 1895: All commercial structures on the subject property are now labeled as stores. The greenhouse at the northeastern corner of the property is no longer shown and a new store is located just west of the former structure. The blacksmith building is now labeled as a garage. The adjoining property to the south now contains the “G. Brenner Coal Yard”, which includes two coal sheds and several outbuildings (one of which is shown encroaching on the southeastern corner of the property). No other significant changes are noted on adjoining or surrounding area properties.
- 1913: The structure at the northwestern corner of the property now contains a laundry facility, while a structure at the western portion of the property contains a key manufacturing facility (including machining and plating). A new structure containing two stores is now located at the northeastern corner of the property. No significant changes are noted on adjoining or surrounding area properties.
- 1950-
1952: New structures, which connect to the former key manufacturer (now a furniture warehouse) are shown at the central portion of the property. Several stores at the northern-central portion of the property are now labeled as paper storage and the laundry facility at the northwestern corner of the property is now a furniture warehouse. A dwelling at the southwestern corner of the property is now a store. The coal yard on the southern adjoining property is now a glass warehouse and the marble works on the northern adjoining property has been replaced by several small commercial buildings. A 25-car garage is now located on a southeastern adjoining property. No significant changes are noted in the surrounding area.
- 1984: A portion of the furniture warehouse at the central portion of the property is now labeled “painters storage”. The glass storage building on the southern adjoining property is now used for lumber storage. No other significant changes are noted on adjoining properties. The surrounding area to the northwest is now shown as being vacant (it is not clear whether the area is vacant or if there is no map coverage).

1990: The subject property is now vacant. The western adjoining property now contains a large parking lot, the southern adjoining property is vacant, with the exception of a single unlabeled building, the southeastern adjoining property no longer contains a garage, and the northern adjoining property now contains a large office building and parking lot. The surrounding area to the northwest now contains several large, multi-family apartment buildings and parking lots. The surrounding area to the northeast shows decreased development and a road noted to be the "Westbound Arterial" is shown in the nearby surrounding area to the east.

City Directories

Historical city directories dated 1942, 1948, 1963, 1967, 1972, 1977, 1982, 1988, 1992, 1995, 1998, 2003, 2008, and 2013 were reviewed for the subject property and for several adjoining properties. Occupants of the former buildings on the subject property include Standard Distributors, Inc. (wholesale dry goods), a beauty shop, and residential tenants. The 2008 City Directory lists Gil Petroleum, Inc., at 182 Main Street; however, there is no record of Gil Petroleum, Inc. on the associated property card (Lot 945130) and all former on-site structures were demolished in the early to late 1980s and the listing appears to be an error. No uses of adjoining properties were identified that are likely to represent a significant environmental threat to the subject property. Copies of these directories are provided as Appendix D.

3.1.5 Municipal and Regulatory Agency Records

Assessor's Office Records

City of Poughkeepsie Assessor's Office property card records for the subject property were reviewed on May 1, 2015. Included in the records was a sketch of several former structures at the western portion of the property on Lot 942131 (noted to have been occupied by the "Reliable Furniture Company"), which were demolished in April 1982. Additionally, the property card for Lot 941122 indicates that a former 2.5-story brick dwelling was demolished in May 1977. No other information pertinent to the environmental integrity of the subject property was present in these records. Readily available property ownership information is summarized in Table 2.

Building Department Records

City of Poughkeepsie Building Department records for the subject property were reviewed on May 1, 2015. No information pertinent to the environmental integrity of the subject property was present in these records.

Local Agency Interviews

NYSDEC

A request was made on May 1, 2015 to search the available NYSDEC records for information regarding the subject property. No response from this agency has been received by this office as of the date of this Combined Phase I and II ESA.

3.2 Review of Federal and State Agency Records

Federal and state computer databases and printed records were reviewed for documentation of environmental conditions and/or liabilities relevant to the property.

3.2.1 Methodology

The following ASTM Standard Environmental Record Sources (as available for the subject property's locality) were reviewed (search distances are consistent with, or exceed, ASTM requirements).

- Federal National Priority List (1.0 mile) and delisted National Priority List sites (0.5 mile)
- Federal CERCLIS list and CERCLIS NFRAP site list (0.5 mile)
- Federal RCRA CORRACTS facilities list (1.0 mile)
- Federal RCRA non-CORRACTS TSD facilities list (0.5 mile)
- Federal RCRA generators list (subject/adjoining properties)
- Federal ERNS list (subject property)
- Federal, State, and Tribal Institutional Control / Engineering Control registries (subject property)
- State- and Tribal-equivalent NPL (1.0 mile)
- State- and Tribal-equivalent CERCLIS (0.5 mile)
- State and Tribal Brownfield and voluntary cleanup sites (0.5 mile)
- State and Tribal leaking storage tank lists (0.25 mile)*
- State (including locally administered) and Tribal registered storage tank lists (subject/adjoining properties)
- State and Tribal landfill and/or solid waste disposal site lists (0.5 mile)

* *The search distance for this ASTM database has been reduced due to the high level of development of the area in which the subject property is located.*

The following Additional Environmental Record Sources (as available for the subject property's locality) were reviewed in order to enhance and supplement the review of standard sources:

- State spill file records (0.25 mile)
- State MOSF list (0.5 mile)
- State radon data (by local municipality as available)
- Federal and State wastewater discharge permits (subject/adjoining properties)

A copy of relevant portions of a database search conducted by Environmental Data Resources, Inc. (EDR) for ESI is provided in Appendix E. Not all of the sites contained in the attached database search may be referenced below; some sites may have been excluded based on either ASTM requirements, ESI's scope of services or professional opinion, and/or information obtained during the review of historical records and the site inspection. Some information may have been deemed to not be practically reviewable (e.g., records lack adequate address information). Sites or additional information not included in the database search may also be referenced based on ESI's knowledge of the subject property area.

Where sites have been identified within the specified approximate minimum search distances, ESI's opinion is presented as to any possible impacts that might result in RECs in connection with the subject property, arising from the migration of contaminated soil, soil vapor and/or groundwater. Evaluation of potential impacts to the subject property is based on: distance and direction to the identified site; type of regulated materials and other relevant information found in available records; presence of intervening roadways and/or other physical conduits; local physical setting (topography, soil conditions, geology, hydrology, etc.); and other information known to ESI. Potential vapor encroachment conditions, if any, have been evaluated (as warranted) following the methodology provided in ASTM Standard E2600-10, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.

3.2.2 Findings of Regulatory Records Review

Federal Hazardous Waste-Contaminated Sites

The subject property is not identified on the United States Environmental Protection Agency's (USEPA): National Priority List (NPL) of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions; CERCLIS list of sites that are proposed to the NPL or that are in the screening and assessment phase for possible proposal to the NPL; CERCLIS No Further Remedial Action Planned (NFRAP) list, which are former CERCLIS sites that were delisted because no significant hazardous waste

contamination was found, or because the site has been remediated; or Federal Brownfields list of sites with known or potential contaminants receiving federal cleanup funding.

The subject property is not identified on readily available USEPA Institutional Control/Engineering Control registries.

The following federal sites have been identified:

| <u>Site Name</u> | <u>Site ID</u> | <u>Distance/Direction</u> | <u>Database</u> |
|--------------------------------|----------------|---------------------------|-----------------|
| Central Hudson G & E Corp | NYD980641583 | 0.34 mile, W | CERCLIS NFRAP |
| Hudson River PCBs | NYD980763841 | 0.43 mile, W | CERCLIS |
| Bern Colors | NYD002013951 | 0.41 mile, NW | CERCLIS NFRAP |
| Poughkeepsie City of Qual Krom | NYD071091292 | 0.49 mile, NNE | CERCLIS NFRAP |

Based on ESI's review of reported information, these sites are not likely to have significantly impacted the subject property.

No NPL sites are located within one mile of the property and no other CERCLIS sites or delisted NPL sites are located within a half mile of the property.

State Sites

Inactive Hazardous Waste Disposal Sites

NYSDEC maintains a Registry of Inactive Hazardous Waste Disposal Sites (IHWDS), a state equivalent to the federal NPL, which are commonly referred to as "Registry" or "Superfund" sites. Sites are placed on the Registry if there is evidence that hazardous waste was disposed and NYSDEC and NYSDOH determine that a significant threat to public health is present. When a site has been remediated, it is reclassified or removed from the Registry (delisted) to indicate that the significant threat(s) has been addressed. Non-Registry sites may (but usually do not) also present significant threats.

The subject property is not identified as a NYSDEC IHWDS site, and has not been listed as a site under investigation for inclusion in the IHWDS Registry (a state equivalent to the federal CERCLIS List).

The following sites have been identified in IHWDS database records:

| <u>Site Name</u> | <u>Site ID</u> | <u>Distance/Direction</u> | <u>Classification Code</u> |
|--------------------------------------|----------------|---------------------------|------------------------------------|
| HRH Lead Abatement Site | 314122 | 0.30 mile, ENE | A – active (non-registry site) |
| CH – Poughkeepsie MGP – Water Street | 314070 | 0.34 mile, W | N – no further action at this time |
| Berncolors Dye Co. | 314026 | 0.34 mile, W | N – no further action at this time |
| Qual Krom Site | 314100 | 0.49 mile, NNE | N – no further action at this time |
| A.C. Dutton Lumber Co. | 314081 | 0.59 mile, NNW | N – no further action at this time |

Based on ESI's review of reported information, these sites are not likely to have significantly impacted the subject property.

Voluntary Cleanup, Brownfields Cleanup, and Environmental Restoration Programs

Significantly contaminated properties that are not Registry sites may be listed in NYSDEC database records based on participation in the Voluntary Cleanup (VCP), Brownfields Cleanup (BCP) or Environmental Restoration (ERP) NYSDEC environmental remediation programs. The subject property has not been identified as a NYSDEC remedial program site.

The following NYSDEC environmental remediation program sites have been identified:

| <u>Site Name (Program)</u> | <u>Site ID</u> | <u>Distance/Direction</u> | <u>Classification Code</u> |
|--|--------------------|---------------------------|--|
| Luckey Platt Building (ERP) | E314110 | 0.31 mile, ESE | N –no further action at this time |
| CH – Water St. – Poughkeepsie MGP (BCP, VCP) | C314070/ V00291 | 0.34 mile, W | A – active site (BCP), work is ongoing |
| Qual Krom Site (ERP) | B00036 | 0.49 mile, NNE | N –no further action at this time |
| “400 Block” Restoration Area (ERP) | B00148 | 0.49 mile, ESE | C – completed, may need maintenance |
| Former City of Poughkeepsie Sewage Plant (BCP, VCP) | C314109/ V00639 | 0.50 mile, SW | C – completed, may need maintenance |

Based on ESI’s review of reported information, these sites are not likely to have significantly impacted the subject property.

Registry of Institutional and Engineering Controls in New York State

The subject property is not identified on the NYSDEC’s Registry of Institutional and Engineering Controls in New York State.

Federal Hazardous Waste Handlers

The USEPA Resource Conservation and Recovery Information System (RCRIS) database details facilities that report treatment, storage or disposal of hazardous waste (TSD facilities) or generation or transportation of hazardous waste. Facilities that have been notified by the USEPA to take corrective action with regard to their handling of hazardous waste are classified as CORRACTS facilities.

CORRACTS and/or TSD Facilities

The subject property is not registered with the USEPA as a CORRACTS and/or TSD facility for hazardous waste or materials. No CORRACTS and/or TSD facilities are located within one mile of the property.

Generators or Transporters (Non-CORRACTS)

The subject property is not registered with the USEPA as a generator or transporter of hazardous waste.

The following generators or transporters have been identified at adjoining properties:

| <u>Site Name</u> | <u>Site ID</u> | <u>Distance/Direction</u> | <u>Classification</u> |
|------------------|----------------|---------------------------|-----------------------|
| Dutchess Express | NYR000044123 | Southern adjoining | Generator NLR |

The Dutchess Express property, which adjoins the subject property to the south, is listed on the RCRIS database as a no longer registered non-generator of hazardous waste. This property was listed as a conditionally exempt small quantity generator in 1997 for the removal of spent non-halogenated solvents. No violations are listed for the property. This activity was likely associated with the former use of this property for automotive repair (ESI has knowledge that this property was also used as a taxi facility).

Based on ESI’s review of reported information, the potential exists that the subject property could have been impacted by releases of hazardous materials at this adjoining site.

Landfills and Solid Waste Disposal Facilities

The NYSDEC’s Facility Register does not list the subject property as an active or inactive landfill or solid waste disposal facility.

The following landfills and solid waste disposal facilities have been identified:

| <u>Site Name</u> | <u>Status</u> | <u>Distance/Direction</u> | <u>Classification</u> |
|------------------|---------------|---------------------------|-----------------------|
| G.F. Refuse T.S. | Inactive | 0.10 mile, E | Transfer station |

Based on ESI's review of reported information, this site is not likely to have significantly impacted the subject property.

Chemical Bulk Storage (CBS)

A review of NYSDEC records indicates that the subject property and adjoining properties are not registered as CBS facilities. Observations made during the site inspection did not indicate the presence of chemical bulk storage on the subject property or at adjoining properties.

Petroleum Bulk Storage

Subject Property

A review of the NYSDEC petroleum bulk storage (PBS) database indicates that the subject property is not registered as a PBS facility. No evidence of aboveground or underground PBS tanks was noted on the subject property during the site inspection.

Adjoining Properties

A review of the NYSDEC PBS database indicates that the property at 13-15 South Bridge Street (also noted as a former generator of hazardous waste), which adjoins the subject property to the south, is a PBS facility (PBS Number: 3-185086) as follows:

| <u>Tank ID and Status</u> | <u>Capacity (gal)</u> | <u>Contents</u> | <u>Tank Details</u> |
|---------------------------|-----------------------|-----------------|--|
| 1 – in service | 8,000 | Gasoline | underground, steel/carbon steel, installed 10/1977 |

This adjoining property is additionally registered as a PBS facility under PBS number 3-601912 as follows:

| <u>Tank ID and Status</u> | <u>Capacity (gal)</u> | <u>Contents</u> | <u>Tank Details</u> |
|---------------------------|-----------------------|-----------------|--|
| 1 – closed/removed | 275 | waste-oil | aboveground, steel/carbon steel/iron, closed 09/2006 |

Two closed NYSDEC spill events are reported for this adjoining property (see the State Chemical and Petroleum Spill and Leaking Underground Storage Tank Events subsection, below).

A release of petroleum at this adjoining site could potentially have impacted the subject property. No overt evidence of PBS tanks was noted on this adjoining property.

Major Oil Storage Facilities

The subject property is not listed with the NYSDEC as a major oil storage facility (MOSF). No MOSFs are located within a half mile of the property.

Federal Chemical and Petroleum Spills

The USEPA Emergency Response Notification System (ERNS) database details initial reports of releases of oil and hazardous substances as reported to federal authorities. There are currently no federal chemical or petroleum spills on record for the subject property.

State Chemical and Petroleum Spill and Leaking Underground Storage Tank Events

NYSDEC database records were reviewed to determine possible impacts from leaking tanks and other reported releases within a quarter mile of the subject property.

During the extension of test pits at the northeastern portion of the subject property (see Section 4.0 below), field evidence of petroleum contamination (i.e. petroleum odors, elevated PID readings and

stained soils) were noted at approximately 6 to 8 feet bsg in TP-03 and TP-05, and 6 to 12 feet bsg in TP-06. As a result of these findings, NYSDEC spill number 1502657 was reported for the subject property (the spill file is not closed). No other spill events are known to have occurred at the subject property.

The following spill events are reported for adjoining properties:

| <u>Spill File ID and Status</u> | <u>Location</u> | <u>Material Spilled</u> | <u>Spill Date (Closure Date)</u> |
|---------------------------------|---------------------|-------------------------|------------------------------------|
| 9106196 – closed | 13 South Bridge St. | gasoline | September 9, 1991 (July 6, 1992) |
| 0611093 – closed | 13 South Bridge St. | gasoline | January 4, 2007 (January 17, 2007) |
| 0311129 – closed | 192-194 Main Street | #2 fuel-oil | December 30, 2003 (April 19, 2004) |
| 0212262 – closed | 191 Main Street | Hydraulic oil | March 12, 2003 (July 2, 2004) |

Spill number 9106196 was reported as a result of a tank test failure at the southern adjoining property. The file indicates that a retest was to be performed but no further information is provided. The spill was closed ten months later (state cleanup standards met). Spill number 0611093 was reported for this property when petroleum impacted soils were discovered during soil borings. Laboratory analysis of samples of the impacted soils indicated that the “contamination [was] minimal and [did] not require further investigation/remediation”. The spill was closed approximately two weeks later (state cleanup standards not met).

Spill number 0311129 was reported for an eastern adjoining property when contaminated soils and groundwater were discovered during removal of an underground tank containing #2 fuel-oil. The database file indicates that soils were stockpiled behind the building. No further information is provided regarding cleanup activities; however, the spill was closed four months later (state cleanup standards met).

The potential exists that these spill events at the eastern and southern adjoining properties could have impacted the subject property. Spill number 0311129 could potentially have contributed to petroleum contamination encountered during test pits at the northeastern portion of the subject property (see Section 4.0).

Spill number 0212262 was reported for the northern adjoining property when an elevator malfunctioned. The file indicates that it was unknown if there was a release of hydraulic oil and that 0-gallons of material was released. The spill was closed approximately a year and a half later (state cleanup standards not met). Based on a review of reported information, it is unlikely that this spill event has impacted the subject property.

No other spill events were identified within the search radius with the potential to have significantly impacted the subject property.

Air Discharges

No NYSDEC permits for air discharges from the subject property are known to exist. No operations likely to require a NYSDEC air discharge permit were noted on the subject property.

Wastewater Discharges

No USEPA National or NYSDEC State Pollutant Discharge Elimination System (NPDES or SPDES) permit was identified for the subject property. No wastewater discharges are known to exist on the subject property. According to available information, the subject property has access to the municipal wastewater system. No adjoining properties are registered as NPDES or SPDES facilities.

Radon

Information on radon levels was obtained from New York State Department of Health (NYSDOH) documents. No regulatory standards for radon levels currently exist in New York State. The USEPA has established a guidance value (the level where mitigation measures may be appropriate) for radon

concentrations of 4.0 or greater picoCuries/liter (pCi/l). Other regulatory authorities (e.g., OSHA) have established guidance levels that are directly related to specific site activities (a determination as to applicable radon guidance levels is beyond the scope of this report). A summary of available radon information for the subject property's vicinity is provided below in Table 3.

Table 3: Basement Radon Levels in Vicinity of Subject Property

All radon levels provided in picoCuries/liter (pCi/l)

| NYSDOH Radon Information | Dutchess County | City of Poughkeepsie |
|---------------------------------|------------------------|-----------------------------|
| Number of Homes Tested | 3,167 | 1,086 |
| Average Radon Level | 4.03 | 3.42 |
| Percent of Homes >4.0 pCi/l | 54% | 48% |

These average radon levels are below the USEPA's guidance value of 4.0 pCi/l; however, more than a third of the homes tested in the subject property's vicinity had levels in excess of this guidance value. These data support the conclusion that elevated radon levels may be present on the subject property. According to available information, radon testing has not been conducted on the subject property. The absence of any residential use of the property suggests that radon testing is not required at this time.

3.3 Site Inspection

3.3.1 Protocol

The site inspection was conducted on May 1, 2015 in order to address any potential concerns raised during the investigation of the site's history (Section 3.1) and the regulatory agency records review (Section 3.2), and to identify any additional indications of contamination from the use, storage, or disposal of hazardous or regulated materials. To the extent possible, site structures, vegetation, topography, surface waters, and other relevant site features were examined for any obvious evidence of existing or previous contamination or unusual patterns (e.g., vegetative stress, soil staining, surface water sheen, or the physical presence of contaminants), which would indicate that the environmental integrity had been or could be impacted.

Section 3.3.2 describes the physical characteristics of the subject property. Section 3.3.3 is divided into topics on specific environmental conditions or concerns, actual or potential, noted on the subject property during the site inspection. Section 3.3.4 describes the physical characteristics of adjoining properties as they concern the potential or actual environmental condition of the subject property.

A Selected Site Features/Fieldwork Map illustrating the general layout of the subject property and the locations of specific areas of concern (if any) is provided on Page 8. Photographs of the subject property are provided in Appendix A.

3.3.2 Physical Characteristics of the Subject Property

3.3.2.1 Property

The subject property is an irregular-shaped, vacant 0.61-acre parcel, which has 235.7 feet of frontage on the southern side of Main Street and 190.2 feet of frontage on the eastern side of South Bridge Street. The property currently contains a grass covered park and wooded areas at the southern and eastern property borders. The northern and western property borders are defined by Main Street and South Bridge Street, while the eastern and southern property lines are defined by a chain link fence and buildings, respectively.

3.3.2.2 Structures

No structures are present on the subject property; however, evidence of former on-site structures (foundation remains, brick debris) was observed during the site inspection. According to Assessor's Office records, the subject property has access to the municipal water and sewage systems. No water supply wells were noted on the subject property during the site inspection and no on-site uses of groundwater are known to exist for the subject property.

3.3.3 Specific On-Site Environmental Conditions

Debris Areas

Building debris, consisting of concrete and wood, was observed at the southeastern portion of the property near an adjoining building (noted to be in poor condition). Additionally, brick debris was observed at the eastern property border. During the extension of test pits on the property (see Section 4.0), subsurface fill/debris materials consisting of brick, concrete, metallic materials, building materials, and wood were observed between approximately 0.5 and 9 feet bsg. These materials could potentially contain asbestos and/or lead based paint.

Scattered household trash was observed throughout the property (particularly along property borders). Several tires were noted at the southeastern corner of the property. None of these materials are likely to represent a threat to the environmental integrity of the subject property.

Petroleum Storage

No evidence of the on-site storage or use of petroleum products (small containers, aboveground tanks or indications of underground tanks) was observed on the subject property.

Chemical Storage

No evidence of the on-site storage or use of chemical products (small containers, aboveground tanks or indications of underground tanks) was observed on the subject property during the site inspection.

Asbestos-Containing Materials and Lead Based Paint

The likely dates of construction of the former on-site buildings (prior to 1887) suggests that asbestos-containing materials (ACM) and lead-based paint (LBP) may have been used during initial building construction and/or during subsequent maintenance work. During the extension of test pits on the property (see Section 4.0), debris from former on-site structures was observed to be present in subsurface soils. Subsurface soils and debris/fill materials on the property could potentially contain asbestos and/or lead based paint (elevated lead concentrations detected in soil samples collected at the property may be derived from lead based paint associated with subsurface debris).

Wastewater Discharges

The term "wastewater" indicates water that: (1) is or has been used in an industrial or manufacturing process; (2) or is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant; (3) or conveys or has conveyed sewage (water originating on or passing through or adjacent to a site, such as stormwater flows, is not generally considered to be wastewater). No evidence of wastewater discharges into drains, ditches, or streams on or adjacent to the property was observed during the site inspection.

Stormwater Management and Exterior Drains/Sumps/Conduits

No exterior stormwater catch basins, drains, sumps, or other potential significant conduits to the subsurface, or indications of liquid discharges into drains, ditches, or streams on or adjacent to the property, were observed on the subject property.

Staining/Corrosion/Leaks

Stained soil was observed during the extension of test pits (see Section 4.0). No other evidence of corrosion, leaks, or staining (indicative of an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products onto the subject property, was observed during the site inspection.

Topographic Irregularities

No overt topographic irregularities (e.g., sinkholes or berms) indicative of the presence of non-natural materials (including debris) in the subsurface were observed on the subject property.

Vegetative Features

No overt areas of stressed or dying vegetation indicative of the presence of contaminants in surface or subsurface soils were observed on the subject property.

Pits, Ponds, or Lagoons

No pits, ponds, or lagoons exhibiting evidence (e.g., discolored water, distressed vegetation, obvious wastewater discharge) of holding liquids or sludge containing hazardous substances or petroleum products were observed on the subject property.

Surface Waters

No surface water bodies are located on the subject property.

Odors

Soil with petroleum odors was noted during the extension of test pits (see Section 4.0). No other unusual odors indicative of the presence of contamination were noted during the site inspection.

PCBs

An inspection for the presence of equipment likely to contain polychlorinated biphenyls (PCBs) was conducted by this office. PCBs were widely used in equipment such as transformers, capacitors, and hydraulic equipment until 1979 when the USEPA regulated their use in this capacity. No equipment likely to contain PCBs was noted on the subject property.

3.3.4 Environmental Concerns at Adjoining and Nearby Properties

Adjoining and nearby properties were observed from the subject property and from public thoroughfares for the purpose of identifying any recognized environmental conditions or other potential environmental concerns. No conditions likely to significantly impact the subject property were observed during the site inspection.

4.0 SUBSURFACE INVESTIGATION

4.1 Summary of Services

In order to investigate subsurface conditions at the Site, ESI extended thirteen (13) test pits to a maximum depth of 12 feet bsg and collected nine (9) soil samples for laboratory analysis of: volatile organic compounds (VOCs, USEPA Method 8260); semi-volatile organic compounds (SVOCs, USEPA Method 8270); Target Analyte List (TAL) metals (USEPA Methods 6010/7473); and pesticides and PCBs (USEPA Methods 8081/8082).

This Phase II ESA is divided into individual sections that document fieldwork methodology (Section 2.2) and laboratory results (Section 2.3), and present ESI's conclusions and recommendations (Section 3.0).

4.2 Fieldwork Methodology

4.2.1 Site Preparation Services

Prior to the initiation of fieldwork, a request for a complete utility markout of the subject property was submitted by ESI as required by New York State Department of Labor regulations. Confirmation of underground utility locations was secured and a field check of the utility markout was conducted prior to the extension of soil borings.

4.2.2 Extension of Test pits

Thirteen test pits were extended on the Site on May 26, 2015, as follows:

- TP-01 was extended at the southwestern portion of the Site, on Lot 941122;
- TP-02, TP-03, TP-04 and TP-06 were extended at the eastern portions of the Site, on Lot 942131;
- TP-05 was extended at the northern-central portion of the Site, on Lot 945130;
- TP-07, TP-11, and TP-13 were extended at the western-central portions of the Site, on Lot 942131;
- TP-08, TP-09, and TP-10 were extended at the northwestern portions of the Site, on Lot 942131; and,
- TP-012 was extended at the southwestern portion of the Site, on Lot 941122.

A Selected Site Features/Fieldwork Map indicating boring locations and selected site features is provided on Page 8.

Test pits were extended by personnel from Karl Mannain Excavators using a rubber-wheeled backhoe with a twelve foot reach. Sampling was conducted at each test pit location to a maximum depth of twelve feet below grade or until refusal was reached. Dedicated sampling equipment was used during the collection of samples exposed during the extension of test pits, consistent with established NYSDEC protocols.

A MiniRAE Lite 3000 (Model PGM 7300) photo-ionization detector (PID) was utilized by ESI personnel to screen all encountered material for the presence of any volatile organic gas where appropriate. Prior to the initiation of fieldwork, this PID was properly calibrated to read parts per million calibration gas equivalents (ppm-cge) of isobutylene in accordance with protocols set forth by the equipment manufacturer.

An assessment of subsurface soil characteristics, including soil type, the presence of foreign materials, field indications of contamination (e.g., unusual coloration patterns, or odors), and instrument indications of contamination (i.e., PID readings) was made by ESI personnel during the extension of each test pit. ESI personnel maintained independent field logs documenting physical characteristics, PID readings, and any field indications of contamination for all encountered material at each boring location.

Samples of soil material were collected from each of the test pits where appropriate (see Section 2.2.3 for specifics regarding sample collection methodology) and notations were made regarding the sampled material's physical characteristics. A sufficient volume of material was collected at each sample location for the required analyses and for potential additional analyses.

Subsurface soils encountered during the extension of test pits at the eastern and central portions of the Site generally consisted of brown, fine to medium sands overlying dense, brown to black, moist loamy clay with organic odor. Soils encountered at the western portions of the Site consisted of brown to gray, variable texture sands overlying brown to dark brown, moist loamy clay. Groundwater was encountered between 10 and 12 feet bsg during the extension of the test pits at the northeastern portion of the property.

With the exception of TP-01, subsurface debris (likely derived from former on-site structures) consisting of brick, concrete, metallic materials, building materials and wood was encountered in test pits at depths ranging from approximately 0.5 to 9 feet bsg.

Moderate petroleum odors, elevated PID readings (peak level 150 ppm) and stained soils were observed during the extension of test pits TP-03, TP-05, and TP-06 at the northeastern portion of the Site. Petroleum-related impacts were noted at approximately 6 to 8 feet bsg in TP-3 and TP-5, and 6 to 12 feet bsg in TP-06. As a result of these findings, spill number 1502657 was reported to the NYSDEC.

No other field evidence of contamination was observed during the extension of test pits.

4.2.3 Sample Collection

All soil samples collected by ESI were obtained in a manner consistent with NYSDEC sample collection and decontamination protocols. All field personnel wore dedicated, disposable gloves, and all samples were placed into laboratory-supplied containers. Soil samples were collected directly from soils exposed during the extension of test pits.

All soil samples were placed in a cooler immediately after sample collection and were maintained at cold temperatures prior to transport to the laboratory. Samples were transported on May 28, 2015 via courier to York Analytical Laboratories, Inc., a New York State Department of Health-certified laboratory (ELAP Certification Number 10854) for chemical analyses.

4.3 Laboratory Analysis

4.3.1 Guidance Levels

The term "guidance level", as defined in this Combined Phase I and II ESA refers to the concentration of a particular contaminant above which remedial actions are considered more likely. The overall objective of setting guidance levels is to assess the integrity of on-site soils relative to conditions which are likely to present a threat to public health or the environment, given the existing and probable future uses of the Site. On-site soils with contaminant levels exceeding these guidance levels are considered more likely to warrant remediation. No independent risk assessment was performed as part of this investigation.

The guidance levels identified in this Combined Phase I and II ESA for all compounds detected in soils are based on NYSDEC Remedial Program Soil Cleanup Objectives (SCOs) for Unrestricted Use (UUSCOs) as provided in 6 NYCRR Subpart 375, Table 375-6.8(a), and on Soil Cleanup Levels (for gasoline and fuel oil contaminated Soils) presented in NYSDEC CP-51 (Soil Cleanup Guidance, October 2010) Tables 2 through 3. Guidance levels for pesticides and metals detected in soils were also compared to Restricted Use, "Restricted-Residential" SCOs (RRUSCOs) as provided in Table 375-6.8(b) and Supplemental Soil Cleanup Objectives presented in CP-51 Table 1.

All data presented in this Combined Phase I and II ESA have been analyzed in accordance with applicable guidance levels.

4.3.2 Sample Submission

Submission of samples for laboratory analysis was based on observations made by ESI personnel during the extension of the test pits, including the presence or absence of elevated PID readings, unusual odors, discoloration, or, any other unusual patterns. A sufficient number of samples were submitted for analysis to provide a general screening of the property.

Soil samples were analyzed as follows:

- TP-03, TP-05, TP-06, TP-10 and TP-12 – VOCs;
- TP-03, TP-05 and TP-06 – SVOCs;
- TP-04, TP-08 and TP-13 – pesticides and PCBs; and,
- TP-02, TP-04, TP-08, TP-10, TP-12 and TP-13 – TAL metals.

4.3.3 Laboratory Results

A summary of the results of the laboratory analyses conducted on soil and soil vapor samples is presented below. Data summary tables and the laboratory report are provided in Appendices F and G, respectively, recommendations regarding these findings are located in Section 5.0.

VOCs

Acetone was detected above UUSCOs (0.05 ppm) in TP-03 at 0.094 ppm and TP-05 at 0.06 ppm. Trace level concentrations were also detected in TP-06, TP-10, and TP-12; however, acetone is a common laboratory contaminant and was also detected in the batch blanks associated with TP-10 and TP-12. No other VOCs were detected at concentrations above guidance levels.

Trace level concentrations of several other VOCs (e.g., 2-butanone, 1,2,4-trimethylbenzene, and sec-butylbenzene) were detected in TP-03, TP-05, and TP-06. No other VOCs were detected in TP-10 and TP12.

SVOCs

The following SVOCs were detected in TP-05 at concentrations above SCOs:

- Benzo(a)anthracene exceeded the RRUSCO (1 ppm) at 2.77 ppm;
- Benzo(a)pyrene exceeded the RRUSCO (1 ppm) at 1.95 ppm;
- Benzo(b)fluoranthene exceeded the RRUSCO (1 ppm) at 1.86 ppm;
- Benzo(k)fluoranthene exceeded the UUSCO (0.8 ppm) at 1.41 ppm;
- Chrysene exceeded the UUSCO (1 ppm) at 2.19 ppm; and,
- Indeno(1,2,3-cd)pyrene exceeded the RRUSCO (0.5 ppm) at 0.643 ppm.

No other SVOCs were detected at concentrations above UUSCO guidance levels. Trace and low-level concentrations of several other SVOCs (e.g., fluoranthene, fluorene, and/or phenanthrene) were detected in each of the soil samples submitted for analysis.

Pesticides

The following pesticides were detected in TP-08 at concentrations above RRUSCOs:

- 4,4'-DDE (RRUSCO 8.9 ppm) at 20.1 ppm;
- 4,4'-DDT (RRUSCO 7.9 ppm) at 44 ppm;
- Alpha chlordane (RRUSCO 4.2 ppm) at 64.7 ppm; and,
- Gamma chlordane (RRUSCO 0.54 ppm) at 73.8 ppm.

A significantly elevated concentration of total chlordane (482 ppm [SCO not established]) and an elevated concentration of endrin aldehyde (5.11 ppm [SCOs not established]) were also detected in TP-08. No other pesticides were detected in any soil samples submitted for analysis.

PCBs

No PCBs were detected in any soil samples submitted for analysis.

Metals

The following TAL metals were detected at concentrations above SCOs:

- Barium exceeded the RRUSCO (400 ppm) in TP-08 at 915 ppm.
- Copper exceeded the UUSCO (50 ppm) in: TP-04 at 51.8 ppm; TP-08 at 68.5 ppm; TP-12 at 136 ppm; and, TP-13 at 74.1 ppm.
- Iron exceeded the RRUSCO (2,000 ppm) in all samples at concentrations ranging from 17,500 ppm in TP-10 to 29,500 ppm in TP-02.
- Lead exceeded the RRUSCO (400 ppm) in: TP-04 at 635 ppm; TP-08 at 5,450 ppm; TP-10 at 3,200 ppm; TP-12 at 802 ppm; and, TP-13 at 817 ppm.
- Mercury exceeded the RRUSCO (0.81 ppm) in TP-04 at 2.03 ppm; TP-10 at 0.88 ppm; TP-12 at 1.48 ppm; and, TP-13 at 3.08 ppm. Mercury was also detected above the UUSCO (0.18 ppm) in TP-08 at 0.79 ppm.
- Zinc exceeded the UUSCO (109 ppm) in: TP-04 at 245 ppm, TP-08 at 906 ppm; TP-12 at 501 ppm; and, TP-013 at 316 ppm.

No other TAL metals were detected at concentrations above guidance levels.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Ecosystems Strategies, Inc. (ESI) has performed a Combined Phase I and II Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of the property located at 178-182 Main Street & 11 South Bridge Street, City of Poughkeepsie, Dutchess County, New York. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. The Environmental Professionals preparing this report have not identified any significant data gaps that affect their ability to identify recognized environmental conditions (RECs).

This assessment has revealed evidence of the following recognized environmental conditions (RECs) in connection with the property:

- Documented petroleum contamination at the northeastern portion of the property (and associated open NYSDEC spill event)
- Documented metals contamination throughout the property and pesticide contamination at the north-central portion
- Presence of urban fill materials to various depths
- Potential impacts from releases at adjoining properties with NYSDEC spill events

ESI's major findings, conclusions and recommendations (in **bold**) regarding any RECs and any other potential environmental liabilities associated with the property are presented below. Cost estimates for any proposed investigations and/or remedial actions are provided in *italics* where appropriate.

1. The subject property is likely to have been used for commercial and residential purposes from as early as 1887 until the early to mid-1980s when all former on-site structures were demolished. Laboratory data generated during the Phase II portion of this investigation (see Sections #2 and #3, below) indicate that petroleum contaminated soils are located at the northeastern portion of the property and that metals and pesticide contamination is present in soil and fill/debris materials. The source of the documented soil contamination may be from historical manufacturing operations or other commercial uses, or may be related to debris from the demolition of former on-site structures (identified in test pits extended throughout the Site). Debris materials may contain lead based paint, asbestos, or other regulated materials and all subgrade materials demonstrate characteristics of regulated waste. Current use of the property as a park is not likely to have impacted the subject property.

No further investigation of historical records is recommended (see, however, Paragraphs 2 and 3, below). Any future development activities at the property should be conducted with an awareness of the presence of subsurface debris and provision should be made for the proper management of any materials that warrant special handling.

2. Thirteen test pits were extended at the Site. Overt field evidence of petroleum contamination was observed at the northeastern portion of the Site. Laboratory analysis of impacted soils documented the presence of petroleum based volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs); however, only one sample contained SVOCs at concentrations above guidance levels. Based on these findings, spill number 1502657 was reported to the NYSDEC (the subject property was not otherwise identified during the review of regulatory agency records conducted by this office).

Spill number 0311129 was reported for the eastern adjoining property based on soil and groundwater contamination discovered during the removal of an underground fuel-oil tank. The southern adjoining property was identified as a former generator of hazardous waste (spent non-halogenated solvents), a PBS facility, and the site of two closed NYSDEC spill events. The database file for one of the spill events indicates that petroleum impacted soils may have been left in place beneath the on-site building. Based on a review of available information, these adjoining properties could have impacted the subject property. No other adjoining or nearby properties were identified that are likely to have significantly impacted the environmental integrity of the subject property.

It is recommended that additional investigation be conducted to delineate the full extent of documented petroleum contamination, following a NYSDEC-approved work plan. Such investigation should include installation of monitoring wells, collection of groundwater and soil vapor samples, and additional soil sampling to identify the extent of subsurface petroleum contamination (including potential impacts from off-site sources) and determine appropriate remedial strategies (see also, #3 below).

Petroleum contaminated soils should be removed from the Site in accordance with applicable regulations. Off-site disposal of petroleum contaminated soil will require additional sampling for waste characterization analyses. All investigative data and disposal documentation should be provided to NYSDEC in support of closure of spill number 1502657.

3. Observations made during fieldwork activities indicate the presence of buried debris consisting of brick, concrete, metallic materials, building materials, and wood. No evidence of tanks, drums, or hazardous materials were noted; however, metallic and painted materials, and possibly waste pesticides, are likely sources of elevated metals concentrations. With the exception of the southeastern portion of the Site, fill materials and debris were identified in each test pit at depths ranging from less than 1 foot to approximately 9 feet below grade.

Metal contamination is present throughout the subject property, with particularly high total-weight concentrations of lead detected at the western portion and northern-central portion (also the location of high pesticide levels). These findings suggest that some on-site soils could require management as hazardous waste.

It is recommended that an additional subsurface investigation be performed at the Site to more fully characterize site conditions, including an assessment of groundwater quality and documentation of the presence or absence hazardous materials (the investigation can be performed in conjunction with remedial activities associated with NYSDEC spill number 1502657). Any soil or debris excavated during remedial or site development activities should be properly characterized and handled, with all regulated materials disposed off-site at a permitted facility. Notification of site conditions should be provided to third parties (such as construction personnel) so that any construction activities that are likely to involve disturbance of impacted materials are managed in accordance with applicable NYSDEC regulations, including implementation of a site-specific Health and Safety Plan, proper sampling of soils slated for off-site disposal, and proper dust and runoff control. Exposure to remaining contamination should be mitigated with engineering controls, such as installation of a cover system (building foundation, pavement, imported clean soil, etc).

An environmental condition is considered “de minimis” when that condition generally does not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions. This assessment has revealed evidence of the following de minimis conditions in connection with the property:

4. Scattered garbage was observed throughout the property, particularly along the southern property line. None of these debris materials were judged by this office to pose a threat to the environmental integrity of the subject property.

It is recommended that debris materials be segregated into appropriate waste streams (i.e., those which can be disposed of as non-regulated solid waste and those which require special handling) and be disposed of off-site.

5. Elevated concentrations of radon may be present at the subject property.

It is recommended that radon testing be completed on the property in the event of any future residential development.

7.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

The following statements are required by 40 CFR 312.21(d) of the environmental professional(s) responsible for conducting and preparing the Combined Phase I and II Environmental Site Assessment report.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

and

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

178-182 MAIN STREET AND 11 S. BRIDGE STREET
POUGHKEEPSIE, NY 12601

COORDINATES

Latitude (North): 41.7047000 - 41° 42' 16.92"
Longitude (West): 73.9322000 - 73° 55' 55.92"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 588843.4
UTM Y (Meters): 4617328.0
Elevation: 132 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/16/2014 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are

EXECUTIVE SUMMARY

3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 09/18/2014 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

| <u>Equal/Higher Elevation</u> | <u>Address</u> | <u>Direction / Distance</u> | <u>Map ID</u> | <u>Page</u> |

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 09/18/2014 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 03/25/2015 has revealed that there are 5 SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 01/06/2015 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 03/19/2015 has revealed that there are 14 LTANKS sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal Brownfields sites

ERP: In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

A review of the ERP list, as provided by EDR, and dated 03/25/2015 has revealed that there are 3 ERP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 03/19/2015 has revealed that there are 35 NY Spills sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 11 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

|-------------------------------|-----------------------------|--------------------------------|---------------|-------------|
| HUDSON RIVER PCBS | NO STREET APPLICABLE | W 1/4 - 1/2 (0.426 mi.) | 0 | 8 |

HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 3 HSWDS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 3 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 2 EDR US

HUDSON RIVER PCBs (Continued)

1000384273

Pathway: SURFACE WATER PATHWAY
Scoring: 4

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower

HUDSON RIVER PCBs (Continued)

1000384273

Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/ erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on

Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location: The site is located at 55 Garden Street in the City of Poughkeepsie, Dutchess County. Site Features: The 0.17 acre site includes a single family home with small front and rear yards. Current Zoning and Land Use: The site is currently zoned and in use as a single family residence. Past Use of the Site: The site was a single family residence that was abated for lead paint as part of a rehabilitation project. Site Geology and Hydrogeology: The primary contaminant associated with the site is lead, which resulted from the abatement of lead paint as part of the rehabilitation of the structure. All lead resulting from the abatement was containerized and properly disposed off-site.

Program: BCP
 Site Code: 57435
 Acres: 13.000
 HW Code: C314070
 SWIS: 1413
 Town: Poughkeepsie (c)
 Update By: BRWOLSE

Site Description: Location: The site is located on the banks of the Hudson River at the end of Dutchess Avenue, in the north end of the city of Poughkeepsie. The site is approximately 13 acres in size and is bounded by: the Hudson River to the West, Dutchess Ave. to the north, North Water St. to the east and the Fallkill Creek to the south. An abandoned lumber treatment facility (AC Dutton Lumber), remediated under a Brownfield Cleanup Agreement and currently under redevelopment, forms the remainder of the northern site boundary. To the east, beyond Water Street, lies a Metro North railroad yard. Site Features: The upland portion of the site consists of two relatively flat terraces, separated by steep, rocky slopes. The lower terrace lies on the banks of the Hudson River, roughly 5-10 feet above sea level. The upper terrace is roughly 50 feet higher, bordering Water Street. Gas and electric lines cross the river at this location, and connect with gas and electrical lines on the site. An electrical transformer station is located at the southwestern portion of the site, where the

S106906509

electrical transmission line meets the shoreline. Current Zoning and Land Use: The site is zoned commercial. Surrounding land uses are predominantly, but not exclusively, industrial. Two residences are situated directly across Dutchess Avenue at the northeast corner of the site. Past Uses of the Site: The site housed a large manufactured gas plant from 1911 to the mid 1950s. Coal tar from the gas manufacturing process leaked from storage vessels and piping, and are still present in the subsurface. Some of these tars still discharge sporadically into the Hudson River. Previous investigations: Previous investigations at the site include: Phase 1 Investigation (1986), Phase 2 Investigation (1990), Supplemental RCRA Testing (1991), Supplemental Preliminary Site Assessment (2000), Supplemental Land Investigation (2003), Supplemental Land and River Investigations (2004), Supplemental River and Land Investigations (2005). Site Geology and Hydrogeology: The upper tier of the site consists of highly deformed slate and limestone bedrock, with a very thin fill cover. The lower tier consists of fill containing shot rock from the blasting of the cliff face and silty sand. Bedrock on the lower tier ranges from 0 to 15' below grade, deepening toward the river. Groundwater flow in both the overburden and bedrock aquifers is to the west, toward the river. The Hudson river in this area is a tidal stream and tidal influences to near shore groundwater levels is pronounced.

Env Problem: Contaminants of concern: The principal waste disposed on the site was MGP tar, which is a brown, oily liquid that is slightly denser than water. Large amounts of this tar escaped into the subsurface, and this tar can still be found in soils and bedrock beneath the site. The tar contains high levels of BTEX and PAH compounds. Both groups of compounds have been found in site groundwater. Impacted Media: The soil and bedrock aquifers beneath the western portion of the site, along the banks of the Hudson River, are contaminated with separate phase MGP tar and with dissolved BTEX and PAH compounds derived from the tar. MGP tar is being collected on a bi-annual basis from two wells along the western boundary of the site. Over 500 gallons have been collected from one overburden well along the river front. Tar continues to move slowly into the Hudson River. Sheens and slicks of tar can be observed off shore, particularly during low tide periods. Hudson River sediments contain MGP tar and PAH contamination derived from the tar. Known SCG exceedances: Site groundwater and soil contain PAH and BTEX compounds at levels far in excess of SCGs. Sediments in the Hudson River contain high levels of the same contaminants, also at levels far above SCGs. Tar continues to move into the Hudson River, causing slicks and sheens on the water surface. This is a violation of New York State Ambient Water Quality Standards. Special Resources impacted: The Hudson River is impacted in the area near the MGP site, with both sediments and the overlying water column affected. Not reported

Health Problem: Access to the site is restricted and measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil or groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to movement of radon gas from the subsurface into the

S106906509

indoor air of buildings, is referred to as soil vapor intrusion. Because there are no occupied buildings on the site, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. People using the Hudson River for recreational purposes such as boating may come into contact with site-related contaminants associated with sheens present on the water's surface.

Site Description: NO INFO
Env Problem: A fire and explosion at the site on January 14, 1982 resulted in a spillage of a large quantity of dye. There was limited soil removal at the time of fire. NUS Phase I completed. A Responsible Party Phase II investigation has been completed. Low level (ppb) PAH's and toluene were found in site soils. Lead also found at ppm levels but did not fail EP toxicity. EPA conducted a removal of the remaining containers of hazardous waste after the fire in 1982.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Date form received by agency: 01/01/2006
Site name: BERNCOLORS-POUGHKEEPSIE INC
Classification: Not a generator, verified

Date form received by agency: 03/28/1995
Site name: BERNCOLORS-POUGHKEEPSIE INC
Classification: Unverified

. Waste code: NONE
. Waste name: None

Date form received by agency: 07/21/1980
Site name: BERNCOLORS-POUGHKEEPSIE INC
Classification: Large Quantity Generator

. Waste code: NONE
. Waste name: None

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 07/06/1986
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

Updated By: GWBURKE

Site Description: This 0.2 acre site is located in a residential section in the City of Poughkeepsie. The site is bordered by an abandoned railroad grade and residential housing. The facility was operated as a metal plating facility until 1987 by the same PRP that operated the hazardous waste site Qual Krom, ID No. 314013. The City took ownership in 1988 for back taxes. Abandoned drums were found inside and outside the building. Samples were collected in 1989. A partial removal was performed in 1992. The drums and wastes that were in the building were similar to those removed from the outside the building. In 1996 the USEPA conducted a CERCLA removal action. It included stabilization of the building; containerization of the vat sludges, drums, and labpacs; inventorying, sampling and analysis of all materials for waste characterization; and disposal. This site was initially designated a potential Registry site ('P' site) and was then remediated under the Environmental Restoration Program. Asbestos abatement, building demolition and soil removal has been completed.

QUAL KROM SITE (Continued)

S105589938

Env Problem: Based upon the fact that soil cleanup numbers for unrestricted residential use were met in the excavation confirmation samples, an Environmental Easement will not be required for the property. The primary contaminants of concern at the site are metals. The site has been remediated. Asbestos abatement, building demolition and soil removal has been completed. An Environmental Easement will not be required for the property

Health Problem: This site no longer represents a public health concern because metals-contaminated soils were excavated and properly disposed off-site and municipal water serves the area.

 Updated By: GWBURKE

Site Description: The project is to remediate an irregularly shaped 1.7-acre parcel which is comprised of 12 tax lots. The southern portion of the property is developed with multi-story brick and wood structures, in which portions of these buildings are partially collapsed. These structures are currently vacant. Historically, these buildings were used for retail, commercial and residential purposes. The central western portion of the property is comprised of an unpaved parking area with overgrown trees and grass. A concrete loading dock extends south from a multi-story brick building located in the north-western portion of the property. An unpaved vacant lot comprised of overgrown lawn is located in the eastern portion of the property. The project scope included removal and disposal of six underground storage tanks and one above storage tank, demolition of all on-site structures, including abatement of asbestos in those buildings not deemed structurally unsound, excavation and disposal of PCB-contaminated soils in the basement of one building and VOC-contaminated and Mercury-contaminated soils in the courtyard of the site, and encapsulation of the site. The site is now remediated. Groundwater monitoring and operation of a sub-slab de-pressurization system are included in the Site Management Plan.

Env Problem: The primary contaminants of concern at the site are PCBs, mercury and PAH's. The site is now remediated. Groundwater monitoring and operation of a sub-slab de-pressurization system are included in the Site Management Plan.

Health Problem: All site structures were demolished and removed from the site. Soil contaminated with elevated levels of site-related contaminants (petroleum, metals and PCBs) were excavated and disposed of off-site.

Site Description: Location Description: The Former City of Poughkeepsie Sewage Treatment Plant site is located at 176 Rinaldi Boulevard at the intersection of Rinaldi Boulevard and Hurlihe Street in the City of Poughkeepsie, Dutchess County. Site Features: The site consists of two parcels comprising a total of 7.1 acres. The site is now home to a catering facility and restaurant that opened in 2006. Current

Zoning/Use: The site was developed in conjunction with the remedial program. A catering facility and restaurant now occupy the property. The surrounding area is predominantly residential and commercial. A pump station owned by the City continues to operate near the site. The site is bordered to the south by the former DeLaval Separator property and to the west by the Hudson River. Past Use(s) of the Site: The site was home to several industrial facilities throughout the years. It has been subject to the disposal of various forms of wastes, including sewage sludge, street cleaning debris and convenience dumping. Site Geology and Hydrogeology: The site is underlain by fill material. Clean fill was imported as part of the remedial program as a cover system. Historic fill is present below the clean fill over much of the site. Native soils, when encountered, consisted of silty sand mixture with some gravel and cobbles intermixed. Under the Brownfield Cleanup Program, a remedial program was completed in the Spring 2006. A Final Engineering Report was submitted and approved, and a Certificate of Completion was issued on August 30, 2006. The site is now in the Site Management phase.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants at the site were petroleum products, semi-volatile organic compounds (SVOCs), and metals.

Health Problem: All grossly contaminated soils have been removed from the site. Soils containing metals and semivolatiles exceeding TAGM 4046 guidance values have been moved to a soil consolidation zone beneath the site building eliminating the potential for direct contact exposure. A sub-slab depressurization was installed during the building's construction to address any soil vapor concerns. The area is served by municipal water.

intersection of Rinaldi Boulevard and Hurlihe Street in the City of Poughkeepsie, Dutchess County. Site Features: The site consists of two parcels comprising a total of 7.1 acres. The site is now home to a catering facility and restaurant that opened in 2006. Current Zoning/Use: The site was developed in conjunction with the remedial program. A catering facility and restaurant now occupy the property. The surrounding area is predominantly residential and commercial. A pump station owned by the City continues to operate near the site. The site is bordered to the south by the former DeLaval Separator property and to the west by the Hudson River. Past Use(s) of the Site: The site was home to several industrial facilities throughout the years. It has been subject to the disposal of various forms of wastes, including sewage sludge, street cleaning debris and convenience dumping. Site Geology and Hydrogeology: The site is underlain by fill material. Clean fill was imported as part of the remedial program as a cover system. Historic fill is present below the clean fill over much of the site. Native soils, when encountered, consisted of silty sand mixture with some gravel and cobbles intermixed. Under the Brownfield Cleanup Program, a remedial program was completed in the Spring 2006. A Final Engineering Report was submitted and approved, and a Certificate of Completion was issued on August 30, 2006. The site is now in the Site Management phase.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants at the site were petroleum products, semi-volatile organic compounds (SVOCs), and metals.

Health Problem: All grossly contaminated soils have been removed from the site. Soils containing metals and semivolatiles exceeding TAGM 4046 guidance values have been moved to a soil consolidation zone beneath the site building eliminating the potential for direct contact exposure. A sub-slab depressurization was installed during the building's construction to address any soil vapor concerns. The area is served by municipal water.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation
Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

USGS TOPOGRAPHIC MAP

| | |
|-----------------------|---------------------------|
| Target Property Map: | 41073-F8 POUGHKEEPSIE, NY |
| Most Recent Revision: | 1995 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION</u> <u>FROM TP</u> | <u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u> |
|---------------|-----------------------------------|---|
| Not Reported | | |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Udorthents

Soil Surface Texture: gravelly loam

Hydrologic Group: Class A/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

| Soil Layer Information | | | | | | | |
|------------------------|----------|-----------|--------------------|---|---|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

APPENDIX G

Laboratory Report

Technical Report

prepared for:

Ecosystems Strategies, Inc.
24 Davis Avenue
Poughkeepsie NY, 12603
Attention: Adam Atkinson

Report Date: 06/04/2015
Client Project ID: KP15045
York Project (SDG) No.: 15E1002

CT Cert. No. PH-0723

New Jersey Cert. No. CT-005

New York Cert. No. 10854

PA Cert. No. 68-04440

Report Date: 06/04/2015
Client Project ID: KP15045
York Project (SDG) No.: 15E1002

Ecosystems Strategies, Inc.
24 Davis Avenue
Poughkeepsie NY, 12603
Attention: Adam Atkinson

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on May 28, 2015 and listed below. The project was identified as your project: **KP15045**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 15E1002

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

| | |
|-------------|--|
| SCAL-E | The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%). |
| QL-02 | This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature. |
| J | Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration. |
| GC-Surr | Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the alternate surrogate. |
| CCV-E | The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit). |
| B | Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact. |
| <hr/> | |
| * | Analyte is not certified or the state of the samples origination does not offer certification for the Analyte. |
| ND | NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL) |
| RL | REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve. |
| LOQ | LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses. |
| LOD | LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846. |
| MDL | METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods. |
| Reported to | This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only. |
| NR | Not reported |
| RPD | Relative Percent Difference |
| Wet | The data has been reported on an as-received (wet weight) basis |
| Low Bias | Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias. |
| High Bias | High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias. |
| Non-Dir. | Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons. |

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record

NOTE: York's Std. Terms & Conditions are listed on the back side of this document. This document serves as your written authorization to York to proceed with the analyses requested and your signature binds you to York's Std. Terms & Conditions unless superseded by written contract.

Ecosystems Strategies, Inc.

APPENDIX H

Scope of Services

Phase I Environmental Site Assessment
Scope of Services

Task 1.0: Description of Subject Property and Surrounding Area Physical Settings

- 1.1 Description of property location, topography, geology, hydrogeology, surface hydrology and wetlands
- 1.2 Identification of adjoining and surrounding area properties

Task 2.0: Historic Investigation (Review of Applicable, Reasonably Ascertainable Sources)

- 2.1 Review of historic maps and plans (to the earliest date of available maps)
- 2.2 Review of aerial photographs
- 2.3 Review of local records (e.g., building department), including cursory ownership information and City Directories, if applicable.
- 2.4 Interviews with User, Key Site Manager, and other knowledgeable individuals.
- 2.5 Review of User or property owner provided documents (e.g., title reports, prior investigations) and/or analytical results

Task 3.0: Federal and State Regulatory Agency Records Review

- 3.1 Review of ASTM-required federal, state, and/or tribal databases at required search distances and analysis of the relationship of each Site (e.g., upgradient, downgradient) to the Subject Property;
 - Federal NPL (1.0 mile) and delisted NPL sites (0.5 mile)
 - Federal CERCLIS list and CERCLIS NFRAP site list (0.5 mile)
 - Federal RCRA CORRACTS facilities list (1.0 mile)
 - Federal RCRA non-CORRACTS TSD facilities list (0.5 mile)
 - Federal RCRA generators list (subject/adjoining properties)
 - Federal ERNS list (subject property)
 - Federal, state, and tribal institutional control/engineering control registries (subject property)
 - State- and tribal-equivalent NPL (1.0 mile)
 - State- and tribal-equivalent CERCLIS (0.5 mile)
 - State and tribal Brownfield and voluntary cleanup sites (0.5 mile)
 - State and tribal leaking storage tank lists (0.5 mile)
 - State (including locally administered) and tribal registered storage tank lists (subject/adjoining)
 - State and tribal landfill and/or solid waste disposal site lists (0.5 mile)
- 3.2 Review of additional federal and state environmental databases:
 - State spill file records (0.5 mile)
 - State MOSF list (0.5 mile)
 - State radon data (by local municipality as available)
 - Federal and state wastewater discharge permits (subject/adjoining properties)
- 3.3 Interviews (as applicable) with government representative regarding regulatory compliance

Task 4.0: Physical Inspection

- 4.1 Inspection of property and structures for potential contamination and contaminant sources, including:
 - Hazardous/medical/radioactive waste storage and disposal areas
 - Petroleum and/or chemical storage (including tanks and associated piping)
 - Overt indications, spatial extent, and current condition of asbestos-containing materials, lead-based paint and mold
 - Wastewater and stormwater discharge systems
 - Equipment potentially containing polychlorinated biphenyls (PCBs)
- 4.2 Inspection of external property for the following:
 - Presence of contamination (e.g., debris, soil staining)
 - Evidence of prior structures and uses
 - Unusual or man-made topographical formations (e.g., berms, sinkholes)
 - On-site surface water quality
 - Evidence and location of wells
 - Vegetative stress
- 4.3 Identification of overt on-site sensitive environmental receptors (e.g., wetlands)
- 4.4 Limited inspection of adjoining and nearby properties for:
 - Potential off-site sources of contamination
 - Sensitive environmental receptors
- 4.5 If appropriate, interviews with owners/tenants/operators and other available knowledgeable individuals present during physical inspection

Task 5.0: Preparation of Written Summary Report

- 5.1 Summary of findings of Tasks 1.0 through 4.0
- 5.2 Identification of any Recognized Environmental Conditions and/or other potential concerns
- 5.3 Conclusions and Recommendations, including any specific additional investigatory or remedial work
- 5.4 Production and transmission of the final Phase I ESA to Client.

Ecosystems Strategies, Inc.

APPENDIX I

Qualifications of Environmental Professionals

Paul H. Ciminello, QEP
PRESIDENT
paul@ecosystemsstrategies.com

EDUCATION

Master of Environmental Management, 1986
School of the Environment, Duke University, Durham, North Carolina

Master of Arts in Public Policy Sciences, 1986
Institute of Policy Sciences and Public Affairs, Duke University, Durham, North Carolina

Bachelor of Arts, 1980
Tufts University, Medford, Massachusetts

CERTIFICATIONS AND TRAINING

Qualified Environmental Professional (QEP), Institute of Professional Environmental Practice (Cert. Number 08130024)

In compliance with OSHA Hazardous Materials Safety (29 CFR 1910) requirements (updated 2012)

Certified Air Quality Specialist, Environmental Assessment Association, 2007

Certified Environmental Manager, Environmental Assessment Association, 2006

NJ Dept. of Environmental Protection Licensed Subsurface Evaluator (License Number: 0014686)

NYS Dept. of Labor Certified Asbestos Building Inspector (Cert. Number: AH92-14884)

NYS Department of State, Division of Licensing Services, Real Estate Instructor

PROFESSIONAL EXPERIENCE

President, Ecosystems Strategies, Inc., Poughkeepsie, New York *1992 to present*

Coordinates corporate strategic planning, financial management and marketing activities. Oversees corporate work on state and federal superfund sites and manages education/training services. Responsible for technical services in areas of pollution prevention, contaminant delineation and site remediation. Twenty-five years experience in the investigation and remediation of organic and inorganic contamination at commercial and residential properties. Major recent projects of relevance include:

- Irvington Waterfront Park (Irvington, NY): Project Manager for site investigation and remedial design of abandoned industrial riverfront properties. Documented soil and groundwater contamination and designed remediation including soil removal and site capping. Project completed in 2000; project awarded the 2000 Gold Medal Award by Consulting Engineers Council of New York State.
- Greyston Bakery Site (Yonkers, NY): Project Manager for site investigation and remedial design of former manufactured gas plant site for future use as a bakery. Documented soil, groundwater and soil gas contamination. Remedial systems included installations of a DNAPL collection system, a barrier layer, a subslab depressurization system under the building, and groundwater monitoring. Project completed in 2004.
- 400 Block Redevelopment (Poughkeepsie, NY): Project Manager for site investigation and remedial design of multi-use industrial development property (boiler repair, clothing manufacturer, auto repair) for future retail/residential use. Documented soil (petroleum, PCBs, metals) and groundwater (petroleum) contamination. Remedial systems include: soil (and tank) removal, installation of a barrier, and groundwater monitoring. Project completed in 2006.

- Prospect Court Housing Site (Bronx, NY): Project Manager for site investigation and remediation of a former gas station/auto repair facility. Documented contamination included both dissolved and free-phase petroleum hydrocarbons, dissolved halogenated solvents, and metals contamination in soil. Remedial systems consisted of In-Situ Chemical Oxidation, soil excavation, vapor interception systems, and on-going groundwater monitoring. Project secured Certificate of Completion from the NYSDEC in December 2012 and received the "Brownfield Innovation Award" from the New York City Brownfield Partnership in 2013.
- Parkview Commons Site (Bronx, NY): Project Manager for site investigation and remedial design of former gas station/auto repair facility for future use as a residential/commercial building. Certificate of Completion was secured from the NYSDEC in 2007.

Senior Hazardous Waste Specialist, U.S. Hydrogeologic, Inc., Poughkeepsie, New York 1986 to 1992
Supervisor for corporate hazardous and solid waste investigatory and remedial services. Major projects included:

- Coordination of subsurface investigations at a New York State Superfund site (former industrial facility); project manager in charge of site reclassification (delisted as of January, 1991).
- Coordination of petroleum storage tank management plan for Dutchess County (NY) Department of Public Works, including an assessment of regulatory compliance, product utilization and physical conditions of more than 100 tanks at over 20 facilities.

Adjunct Professor, (various institutions) 1991 to Present

Dutchess Community College, Poughkeepsie, New York (1991-1996)
Marist College, Poughkeepsie, New York (1999-present)
Vassar College, Poughkeepsie, New York (2007, 2013)

Courses: Macroeconomics, Environmental Economics (DCC)
Introduction to Environmental Issues (Marist)
Environmental Geology Seminar in Environmental Investigation
and Remediation (Vassar)

Policy Intern, Southern Growth Policies Board, North Carolina 1985
Prepared several in-depth and short analyses of environmental and economic issues, with specific concern for their impact on Southern state policies. Analyses included: hazardous waste facility setting policies and environmental impacts of "high tech" industries on host communities.

Research Assistant, University of Oregon, Eugene, Oregon 1983
Analyzed (with Dr. John Baldwin, Chairman of the Department of Planning, Public Policy and Management, U. of Oregon) the "Oregon Riparian Tax Incentive Program". Designed survey, conducted interviews and analyzed data. Summary paper with programmatic recommendations, was presented at the Annual Conference of the National Association of Environmental Educators.

PRESENTATIONS

- "Environmental Risks in Lending", Training for Hudson Valley Federal Credit Union, February 2014
- "Environmental Risks in Lending" Training Session for Pawling Savings Bank employees, December 18 and 19, 1989; and July 1, 1993.
- "Identifying Environmental Concerns in Appraisals", Workshops for Lakewood Appraisal Corporation, October, and November, 1989 and April, 1990.
- "State and Local Groundwater Protection Strategies", Annual meeting of the New York State Association of Towns, February, 1990.
- "Environmental Audits on Orchards and Agricultural Properties", Resource Education Institute, Inc., Real Estate Site Assessment and Environmental Audits Conference, December 4, 1990.

- "Environmental Audits on Orchards and Agricultural Properties", National Water Well Association Annual Conference, July 29-31, 1991.
- "Principles of Environmental Economics for Ground Water Professionals", National Groundwater Association Outdoor Action Conference, May 27, 1993.
- "Impact of Environmental Liabilities on Real Estate Transactions", a NYS Department of Education approved course for licensed real estate professionals, March 1995; April 1995; May 1995; October 1995.
- "Brownfields Redevelopment in New York: A Discussion of Two Case Studies", New England Environmental Conference 1996, March, 1996.
- "Quantifying Environmental Liabilities", a NYS Department of Education approved course for licensed real estate professionals, March 1997.
- "Environmental Assessments in Urban Settings", Vassar College, Fall 1999 and Fall 2000.
- "Navigating Property Contaminant Problems", Land Trust Alliance Rally 2001, Oct 2001.

PROFESSIONAL EXPERIENCE

Director of Environmental Investigations, Ecosystems Strategies, Inc., Poughkeepsie, NY 2013 - present

Management and quality review of environmental site assessments, technical environmental investigations, and remedial projects including Brownfield sites. Conducts research to obtain field and regulatory information about the environmental status of a designated area. Reviews all documents prepared by ESI to ensure consistency and technical accuracy. Responsibilities associated with the preparation of site assessments include: investigating site histories, conducting facility inspections, reviewing regulatory agency records, documenting facility compliance with relevant State and Federal regulations, and preparing reports. Management of complex technical environmental investigations (including sites currently on the NYSDEC Registry of Inactive Hazardous Waste Sites), including coordinating subcontractors, overseeing fieldwork, designing and implementing sampling plans, preparing technical reports, and interfacing with regulatory agency personnel.

Senior Project Manager, Long-Form Reports, The 451 Group, Inc., New York, NY 2008-2011

- Managed the production of over 150 technical white papers.

Senior Project Manager, Ecosystems Strategies, Inc., Poughkeepsie, NY 2001 - 2008

- Conducted Environmental Site Investigations and prepared final site assessment reports. Over 300 Investigations and Final Reports completed as lead manager.
- Investigated site histories.
- Conducted facility inspections.
- Reviewed regulatory agency records.
- Documented facility compliance with relevant State and Federal regulations.
- Conducted Phase II Technical Environmental Investigations and prepared technical reports.
- Researched field and regulatory information.
- Managed tank removals.
- Coordinated subcontractors.
- Oversaw fieldwork and handled collection of material, soil and water samples.

Select Projects

Scenic Hudson Land Trust, Inc., Beacon Waterfront Project, Beacon, NY

ESI conducted soil and groundwater investigations on a former MOSF and adjacent scrap yard. Projects involved soil remediation of both petroleum and PCB-contaminated soils and long-term groundwater monitoring. Both projects were classified as Voluntary Clean-Up projects by the NYSDEC and closure status was attained.

Sakmann Restaurant Corporation Site, Fort Montgomery, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations for former filling station and automotive repair garage contaminated by solvent and waste-oil discharges to an on-site drywell.

Designed and implemented a sampling plan for soils impacted by chlorinated hydrocarbons, petroleum, and metals. Created Workplan (in coordination with the NYSDEC Voluntary Cleanup Program) for remediation of on-site contamination and long-term sampling of on-site groundwater monitoring wells.

Staten Island Marina Site, Staten Island, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigation for an active marine facility engaged in boat painting and engine maintenance activities. Coordinated the delineation of metals contamination over a three-acre area and analyzed potential impacts from on-site fill materials. Submitted remedial and budgetary analysis in support of regulatory agency approval for conversion of boatyard into a public park.

Octagon House Development Site, Roosevelt Island, NY

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations at the former site of a large, urban hospital. Interpreted the results of geotechnical studies, extended test pits, and conducted extensive soil sampling, to document subsurface soil conditions in support of client's application to the U.S. Housing and Urban Development Agency (HUD). Created Workplan (in coordination with the NYCDEP Office of Environmental Planning and Assessment) for site-wide remediation of contaminated soils and secured NYCDEP approval for site remediation as required by HUD.

Camp Glen Gray Boy Scout Facility, Mahwah, NJ

Conducted Phase I Environmental Site Assessment and Phase II Subsurface Investigations at an approximately 800-acre campground containing numerous structures. Documented subsurface soil conditions at the locations of aboveground and underground storage tanks, and delineated lead contamination at a former firing range. Assisted in design and implementation of remediation plans for removal of petroleum and lead contaminated soils, and obtained NJDEP approvals.

EDUCATION

SUNY at Stony Brook, Bachelor of Science - Biology, SUNY at Stony Brook
SUNY at Purchase, extensive studies in Environmental Science
