Dear Mr. Whitcher:

On behalf of Manhattan Beer Distributors (present Site Owner), Environmental Resources Management, Inc. (ERM) has completed the preparation of the December 2010 Quarterly Ground Water Monitoring Report for the subject site. Attached, as requested is one electronic copy for your review and comment and your requested site update information from Manhattan Beer Distributors.

Please feel free to contact me at [dave.myers@erm.com](mailto:dave.myers@erm.com) or on my mobile phone (518-461-8936) if you have any questions or comments.

Very truly yours,

A handwritten signature in black ink that reads "David W. Myers". The signature is written in a cursive style with a large initial "D".

David W. Myers, C.G.  
Senior Project Manager

## INTRODUCTION

On behalf of Manhattan Beer Distributors (Manhattan), Environmental Resources Management (ERM) prepared this Quarterly Ground Water Monitoring Report (Report) to document the December 2010 ground water sampling activities at the Former Banknote Facility. The Former Banknote Facility is a 10-acre parcel of land with buildings located at 10 Dunnigan Drive, Town of Ramapo, Rockland County, New York (the "Site"). A Site Location Map is presented on Figure 1, Attachment A.

Ground water sampling was conducted in accordance with a Brownfield Cleanup Agreement (BCA) with an effective date of 4 June 2004, between Baker Properties, Inc. (Baker) of Pleasantville, New York (the previous Site Owners) and the New York State Department of Environmental Conservation (NYSDEC), BCA Index No.: A3-0424-0007; Site No. C00359-3, and in accordance with the following technical documents:

- NYSDEC-approved "*Remedial Action Work Plan (RAWP)*", under the Voluntary Cleanup Program (VCP); NYSDEC VCP No.: V-00359, Revised December, 2003 (ERM);
- NYSDEC-approved "*Health and Safety Plan*", dated January 2004 (ERM);
- NYSDEC-approved "*Quality Assurance Project Plan*", dated October 2003 (ERM); and
- NYSDEC-approved letter dated 29 April 2004 (ERM), which responded to general comments from the public hearing.

As part of the RAWP, ERM sampled the following ground water monitoring wells MW-1, MW-2, MW-3 MW-4, DW-1, MW-5 MW-6 MW-7, MW-8 and MW-10 for total chromium on a quarterly basis for five quarters and every fifth quarter for five years thereafter. ERM re-evaluated the data after the first three rounds of sampling and in a correspondence dated 12 September 2005, the NYSDEC agreed to remove monitoring wells MW-2, MW-3, MW-7, MW-10 and DW-1 from the sample schedule because the chromium concentrations in the samples collected from these monitoring wells were consistently below the reporting limit for chromium.

Monitoring well MW-1 was destroyed during a parking lot renovation, and is therefore no longer sampled.

## GROUND WATER SAMPLING

Pursuant to the NYSDEC-approved monitoring plan, ERM collected ground water samples at the site during the following months:

- December 2004,
- March 2005,
- June 2005,
- September 2005,
- December 2005,
- March 2007,
- May 2008,
- September 2009, and
- December 2010.

On 30 November 2010, ERM collected the quarterly ground water samples from monitoring wells MW-4, MW-5, MW-6, and MW-8 at the west end of the site. A site layout map showing the locations of the ground water monitoring wells is included as Figure 2, Attachment A.

An ERM geologist collected static water level measurements from each of the wells using an electronic water level indicator, which was washed with a Liquinox™ solution, 10% nitric acid solution and rinsed with distilled water between measurement locations. The reference point used for all water level measurements was the top of the well casing.

The low-flow purging/sampling technique was implemented by ERM for each of the sampled wells, employing a flow-through cell, probe and meter to measure water quality parameters including temperature, pH, turbidity, specific conductivity, oxidation-reduction potential, and dissolved oxygen (DO) continuously at each well during purging. Samples were collected from each of the wells, once the ground water parameters stabilized for three consecutive readings in accordance with the U.S. Environmental Protection Agency Low Stress Purging and Sampling Procedure for Collection of Ground Water from Monitoring Wells, dated 30 July 1996. For quality control requirements a blind field duplicate was collected from MW-4.

All samples were transferred into clean, laboratory-supplied containers and placed into a chilled, thermally insulated cooler

immediately after collection. Federal Express delivered samples to the project laboratory within 24 hours of sample collection and chain of custody procedures were followed during all sample handling and transport.

Ground water samples collected on 30 November 2010 were analyzed by Spectrum Analytical, Inc. (Spectrum) in Agawam, Massachusetts. Spectrum is a New York State Department of Health (NYSDOH) approved environmental laboratory.

### 3.0

#### *GROUND WATER ELEVATIONS*

ERM collected ground water elevations for MW-2, MW-3 MW-4, MW-5, MW-6 MW-7, MW-8, and MW-10 during the 30 November 2010 sampling event (Table 1). A ground water contour map (Figure 3, Attachment A) was compiled using the water level data for the eight shallow monitoring wells.

The ground water contour map indicates that the flow direction of shallow ground water on 30 November 2010 was generally north-northwest consistent with earlier sampling events.

## 4.0

### *ANALYTICAL RESULTS*

Ground water samples collected from the monitoring wells were analyzed for total chromium by United States Environmental Protection Agency 200/6000 Methods in accordance with the 1995 NYSDEC Analytical Services Protocol (ASP) Category B deliverable guidelines. A summary table including the results of previous sampling events is included as Table 2, Attachment B. Ground water sampling records are included in Attachment C. Laboratory analytical report is presented as Attachment D. A Data Usability Summary Report performed by ERM is presented as Attachment E.

Laboratory analytical data from the 30 November 2010 sampling event indicate that total chromium was detected above the NYSDEC ground water standard of 0.050 milligrams per liter (mg/l) in the ground water samples collected from monitoring well MW-4. There are slight fluctuations in concentrations in each of the four wells that were sampled, which are consistent with previous sampling efforts.

**SUMMARY**

The 30 November 2010 sampling event completes the fifth year of the ground water monitoring following the remedial action completed at the Site in 2004.

During the 30 November 2010 sampling event, ERM collected ground water samples from the following monitoring wells MW-4, MW-5, MW-6 and MW-8. Static ground water measurements indicate ground water flow at the Site was to the north-northwest which is consistent with previous sampling events. Analytical data from this sampling event and trends in total chromium concentrations from recent sampling events are discussed in detail below.

Data from the 30 November 2010 sampling event indicates that only one monitoring well (MW-4) contained total chromium at a concentration exceeding the NYSDEC Ground Water Standard. A review of the analytical data from previous sampling events indicated chromium concentrations in the ground water collected from MW-4 have shown slight fluctuations with no clear trend.

There has been a decreasing trend in total chromium concentration in ground water collected from MW-8 since December 2005. This sampling event marks the first monitoring period where total chromium concentration in MW-8 is under the applicable standard.

Total chromium concentrations in MW-6 have shown slight fluctuations, but have been below the applicable ground water standard since July 2002.

Total chromium concentrations in MW-5, have been below the applicable ground water standard since December 2004 and have consistently been below the laboratory's reporting limit since March 2007.

Two wells located within close proximity of the building (MW-4 and MW-8) had total chromium concentrations which exceeded the applicable NYSDEC ground water standard during this five year monitoring period. Ground water data indicates that total chromium concentration in ground water monitored proximal to the boundaries of the Site have been below applicable NYSDEC ground water standards since July 2002.

## 6.0

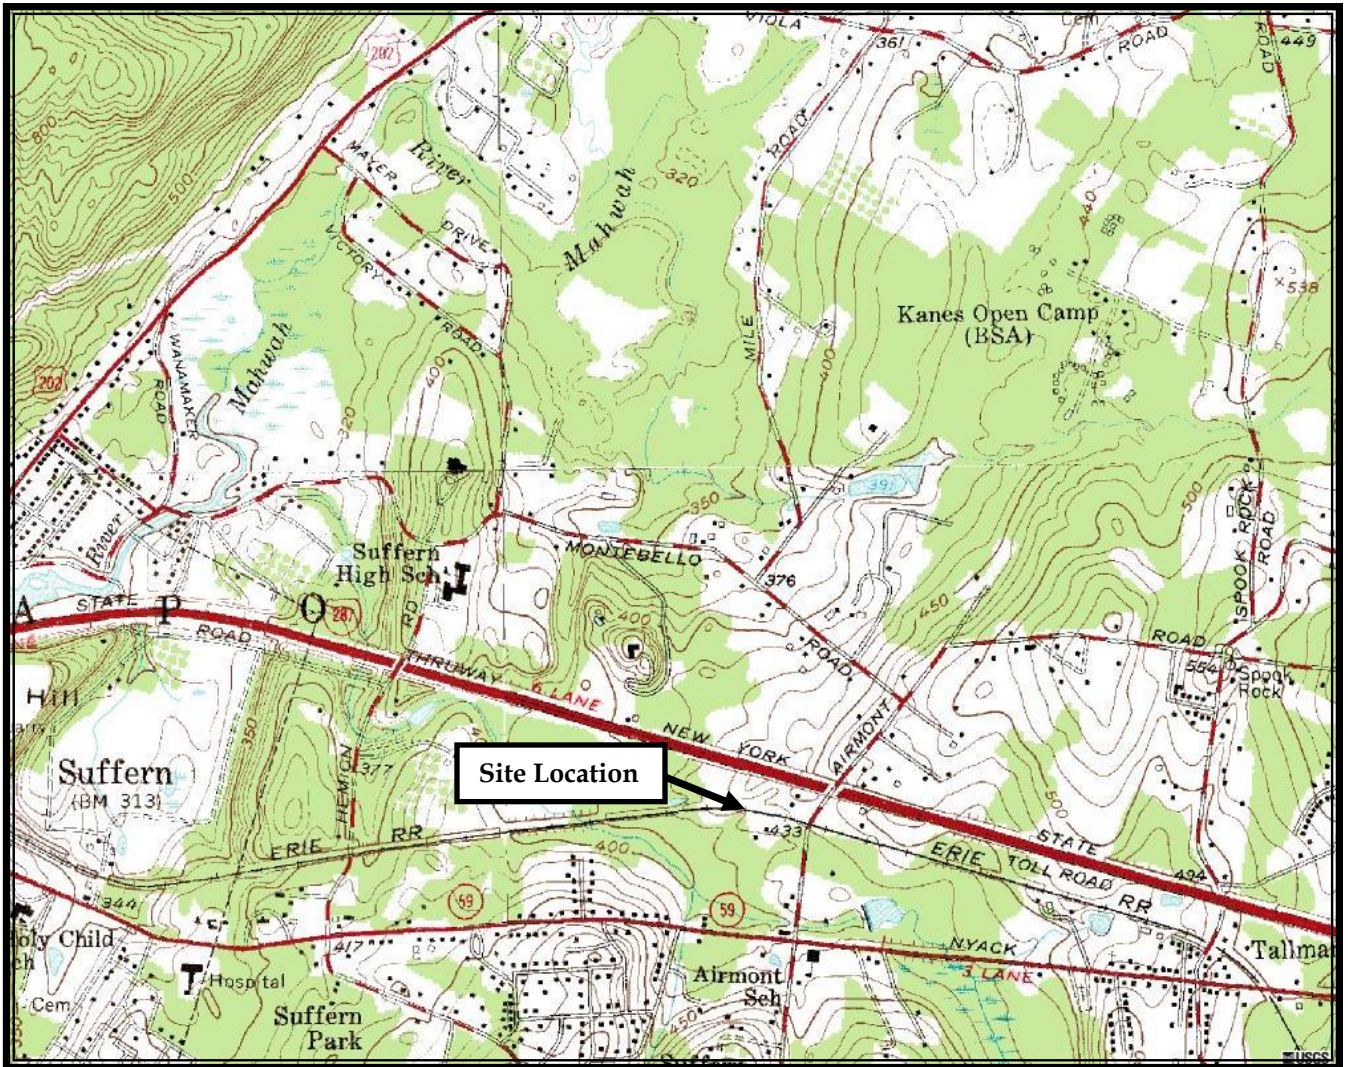

### *RECOMMENDATIONS*

Due to the exceedance of the NYSDEC ground water standard in MW-4, ERM recommends a continuation of ground water monitoring at the Site every fifth quarter over the next 30 months. Sampling events will be completed during March 2012 and June 2013. ERM recommend removing MW-5 from the sampling schedule, as total chromium concentrations have remained well below the applicable standard. During future ground water sampling events ERM recommends sampling MW-4 and MW-8, and using MW-6 as a centennial monitoring point. Following each sampling event, ERM will prepare and submit a letter report discussing the analytical results. ERM will reevaluate Site conditions during the summer of 2013 and make recommendations based on the analytical data and statistical trends in chromium concentrations.

As required by the NYSDEC, a Site Management Periodic Review will be submitted on an annual basis.

Authorized by:

Hanibal C. Tayeh, Ph.D.  
President/Laboratory Director

Technical Reviewer's Initial:

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes.

Please note that this report contains 5 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

*Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at [www.spectrum-analytical.com](http://www.spectrum-analytical.com) for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).*

**CASE NARRATIVE:**

The samples were received 1.6 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 2.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

**There is no relevant protocol-specific QC and/or performance standards non-conformances to report.**

## Notes and Definitions

U	Analyte included in the analysis, but not detected
BDL	Below Detection Limit - Analyte NOT DETECTED at or above the minimum detection limit
BRL	Below Reporting Limit - Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

A plus sign (+) in the Method Reference column indicates the method is not accredited by NELAC.

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic

Report of Laboratory Analyses for Environmental Resources Management

Client Project: Former Banknote Facility – Suffern, NY  
Groundwater samples collected on 11/30/10

Project Number: NA

Spectrum Analytical, Inc. Project ID: SB21844

December 30<sup>th</sup>, 2010

Prepared For: Environmental Resources Management  
5788 Widewaters Pkwy  
Dewitt, NY 13214  
Attn: David Myers

Prepared By: Spectrum Analytical, Inc.  
11 Almgren Drive  
Agawam, MA 01001

**SDG21844**  
**SB21844 General Narrative**

Spectrum Analytical, Inc. submits the enclosed data for the site characterization of Former Banknote Facility located in Suffern, NY. Samples submitted for analysis Environmental Resources Management. This deliverable contains data for five groundwater samples submitted on December 1<sup>st</sup>, 2010.

In addition to USEPA SW846 method analytical guidelines, the analysis was performed according to criteria dictated by National Environmental Laboratory Accreditation Conference (NELAC) and within the guidelines established by the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) requirements.

The following observations and/or deviations are observed for the following analyses:

**1. Overall Observations:**

All of the attached submittals are original other than logbook pages and copies of quality assurance data, which may be shared by other cases. For these, the originals are archived within the laboratory. Standard Operating Procedures follow the corresponding methods without modification.

The pages in this report have been numbered consecutively, starting with the general narrative and ending with the page labeled as "Last Page of data Report".

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this electronic data package, has been authorized by the laboratory director as verified by the following signature.

### 4a Express Package Service

- FedEx Priority Overnight** Shipments next morning\* Friday unless SAT/UNDAY Delivery on Monday unless SAT/UNDAY Delivery is selected.
- FedEx 2-Day** Shipments business day\* Thursday unless SAT/UNDAY Delivery is selected.
- FedEx Standard Overnight** Next business afternoon\* Saturday Delivery NOT available.
- FedEx Express Saver** Third business day\* Saturday Delivery NOT available.
- FedEx First Overnight** Earliest next business morning delivery to select locations\*\*

### 4b Express Freight Service

- FedEx 1-Day Freight** Shipments business day\*\* Friday shipments will be excluded unless SAT/UNDAY Delivery is selected.
- FedEx 2-Day Freight** Shipments business day\*\* Thursday shipments will be excluded unless SAT/UNDAY Delivery is selected.
- FedEx 3-Day Freight** Shipments business day\*\* Saturday Delivery NOT available.

### 5 Packaging

- FedEx Envelope\***
- FedEx Pak\*** Includes FedEx Small Pak and FedEx Large Pak.
- FedEx Box**
- FedEx Tube**
- Other**

### 6 Special Handling and Delivery Signature Options

- SATURDAY Delivery** NOT available for FedEx Standard Overnight, FedEx Express Saver, or FedEx 3Day Freight.
- No Signature Required** Packages may be left without obtaining a signature for delivery.
- Direct Signature** Someone at recipient's address may sign for delivery. Fee applies.
- Indirect Signature** Info on address at recipient's address may sign for delivery. Residential deliveries only. Fee applies.

### 7 Payment Bill to:

- Sender** I will be billed.
- Recipient**
- Third Party**
- Credit Card**
- Cash/Check**

## CASE NARRATIVE

Spectrum Analytical, Inc. Lab Reference No.: (SB21844)

Client : Environmental Resources Management - Dewitt, NY

Project: Former Banknote Facility-Suffern, NY / [none]

SDG #: 21844

### I. RECEIPT

No exceptions were encountered unless a Sample Receipt Exception or a communication form is included in the addendum with this package.

### II. HOLDING TIMES

#### A. Sample Preparation:

All samples were prepared within the method-specified holding time.

#### B. Sample Analysis:

All samples were analyzed within the method-specified holding time.

### III. METHODS

Analyses were performed according to: SW846 6010C

### IV. PREPARATION

Aqueous Samples were prepared according to: SW846 3005A

### V. INSTRUMENTATION

The following equipment was used to analyze SW846 6010C

Iris 3 Details : Thermo IRIS intrepid II XDL CETAC Autosampler

All sample data within this SDG was generated after ICP-AES interelement corrections and background corrections were applied.

### VI. ANALYSIS

#### A. Calibration:

All method criteria were met with the following exceptions:

Chromium In sequence S011625, sample S011625-CRL2 : The low level check standard, CRL2 failed and was rerun as CRL3.

#### B. Blanks:

All initial and continuing blanks were within the acceptance criteria.

#### C. Spikes:

##### 1. Laboratory Control Spikes (LCS):

In Batch: 1025694 All LCS were within the acceptance criteria.

**2. Matrix Spike / Matrix Spike Duplicate Samples (MS/MSD):**

No client requested MS/MSD, however the method criteria may have been fulfilled with non-SDG source samples.

**3. Post Spike Samples (PS):**

N/A

**4. Reference:**

N/A

**D. Duplicate sample:**

No client requested Duplicate, however the method criteria may have been fulfilled with non-SDG source samples.

**E. Samples:**

All results were within the method criteria.

In batch S011625, sample S011625-SRD1 from source sample SB21844-01 client ID Dup (12/10) : The sample concentrations for chromium were sufficiently high (minimally a factor of 50xMDL) therefore a serial dilution is applicable for these analytes.

***DATA USABILITY SUMMARY REPORT***

**DATA USABILITY SUMMARY REPORT (DUSR)  
MANHATTAN BEER DISTRIBUTORS/FORMER BANKNOTE FACILITY  
SUFFERN, NEW YORK  
GROUND WATER SAMPLE ANALYSIS  
ENVIRONMENTAL RESOURCES MANAGEMENT (ERM)  
PROJECT NUMBER 0125992  
SPECTRUM ANALYTICAL, INC. JOB NUMBER SB21844**

5788 Widewaters Parkway  
Dewitt, NY 13214  
(315) 445-2554  
(315) 445-2543 (fax)

<http://www.erm.com>

***Deliverables:***

The above referenced data package for four (4) ground water samples and one (1) blind field duplicate sample contains all required deliverables as stipulated under the New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) for Category B deliverables. The sample specific analysis included Chromium analyzed by United States Environmental Protection Agency (USEPA) SW-846 Method 6010C in accordance with "40 CFR 136, Category A and B Parameters in Water and Wastewater".

The data have been evaluated according to the protocols and quality control (QC) requirements of the ASP; the National Functional Guidelines for Inorganic Data Review (October 2004); the USEPA Region II Data Review SOP Number HW-2, Revision 13, September 2006: Evaluation of Metals Data for the CLP Program; and the reviewer's professional judgment.

This validation report pertains to the following ground water samples collected on 30 November 2010:

*Samples*

MW-4 (12/10)  
MW-5 (12/10)  
MW-6 (12/10)  
MW-8 (12/10)

*QC Samples*

Dup (12/10) - blind field duplicate of sample MW-4 (12/10)

***Chain-of-Custody***

- The Chain-of-Custody (COC) was reviewed for completeness and accuracy. There were no discrepancies observed with the samples presented on the COC, and all tests specified on the COC were performed for the designated samples.

## *Inorganics*

The following items/criteria were reviewed:

- Case narrative and deliverable requirements
- Holding times and sample preservation
- Detection and reporting limits
- Inorganic analysis data sheets (Form I)
- Initial and continuing calibration verifications
- Lab Blank data
- ICP Interference Check Sample (ICS) analysis
- Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) results
- Contract Required Detection Limit (CRDL) Standard
- Serial Dilution results
- Blind Field Duplicate analysis

The items listed above were technically and contractually in compliance with SW-846 protocols with the exceptions discussed in the text below. The data have been validated according to the procedures outlined above and qualified accordingly.

## *Metals*

- Typically a matrix duplicate (MD) and a matrix spike/matrix spike duplicate (MS/MSD) set are collected and submitted to the laboratory per twenty field samples collected. In this case, no MD or MS/MSD were collected or submitted to the laboratory, and the laboratory did not run an MD or MS/MSD on any of the samples. The LCS and LCSD were within the quality control limits for Chromium. No qualification of the sample data is required.
- The CRDL standard recovery was outside of the 70-130% QC limit for Chromium in lab sample S011625-CRL2 (139%), indicating a potential high bias in positive sample results for associated samples at concentrations near the CRDL. Positive concentrations for Chromium are considered estimated and flagged "J" for samples with concentrations less than or equal to two times the CRDL. The CRDL for Chromium is 0.01 mg/L; therefore, samples with positive Chromium concentrations less than or equal to 0.02 mg/L have been flagged "J".

*Package Summary:*

All data are valid and usable with qualifications as noted in this review.

**Institutional and Engineering Controls Certification Form**

	Site Details	Box 1
Site No.	C344047	
<b>Site Name Former Banknote Corporation of America</b>		
Site Address: 10 Dunnigan Drive	Zip Code: 10901	
City/Town: Suffern		
County: Rockland		
Allowable Use(s) (if applicable, does not address local zoning): Commercial and Industrial		
Site Acreage: 5.6		
Owner: Mike McCarthy		
Manhattan Beer Distributors, 400 Walnut Avenue, Bronx, NY 10454		
Reporting Period: August 29, 2008 to July 27, 2010		

	Box 2	
Verification of Site Details	YES	NO
1. Is the information in Box 1 correct?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
If NO, are changes handwritten above or included on a separate sheet?	<input type="checkbox"/>	
2. Has some or all of the site property been sold, subdivided, merged, or undergone a tax map amendment during this Reporting Period?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
If YES, is documentation or evidence that documentation has been previously submitted included with this certification? <i>See referenced reports in the introduction (section 1) of Attached Report</i>	<input type="checkbox"/>	
3. Have any federal, state, and/or local permits (e.g., building, discharge) been issued for or at the property during this Reporting Period?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
If YES, is documentation (or evidence that documentation has been previously submitted) included with this certification?	<input type="checkbox"/>	
4. If use of the site is restricted, is the current use of the site consistent with those restrictions?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
If NO, Is an explanation included with this certification?	<input type="checkbox"/>	
5. For non-significant-threat Brownfield Cleanup Program Sites subject to ECL 27-1415.7(c), has any new information revealed that assumptions made in the Qualitative Exposure Assessment regarding offsite contamination are no longer valid?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
If YES, is the new information or evidence that new information has been previously submitted included with this Certification?	<input type="checkbox"/>	
6. For non-significant-threat Brownfield Cleanup Program Sites subject to ECL 27-1415.7(c), are the assumptions in the Qualitative Exposure Assessment still valid (must be certified every five years)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
If NO, are changes in the assessment included with this certification?	<input type="checkbox"/>

**Control Description for Site No. C344047**

**Parcel: 55.7-1-11**

A. Land Use is restricted to commercial or industrial uses.

**Controls.**

i. The Owner of the Property shall prohibit the use of groundwater underlying the Property, without treatment rendering it safe, for drinking water or industrial purposes, as appropriate, unless the user first obtains permission to do so from the NYSDEC, or any successor agency of the NYSDEC.

ii. The groundwater monitoring wells installed on the Controlled Property as part of the Site Management Plan ("SMP") approved for the Controlled Property by the NYSDEC shall not be removed or rendered ineffective by Grantor, Grantor's assigns, or any lessees and persons using the Controlled Property without the express written approval of the NYSDEC, shall remain accessible at all times, and shall be inspected and tested in accordance with the SMP approved for the Controlled Property by the NYSDEC and any NYSDEC approved adjustments to the SMP.

iii. Grantor shall provide all persons who acquire an interest in the Controlled Property a true and complete copy of the SMP approved for the Controlled Property by the NYSDEC and all NYSDEC-approved amendments of the SMP.

**Periodic Review Report (PRR) Certification Statements**

1. I certify by checking "YES" below that:

a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and complete.

YES NO

2. If this site has an IC/EC Plan (or equivalent as required in the Decision Document), for each Institutional or Engineering control listed in Boxes 3 and/or 4, I certify by checking "YES" below that all of the following statements are true:

(a) the Institutional Control and/or Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

(b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

(c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

(d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

(e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES NO

3. If this site has an Operation and Maintenance (O&M) Plan (or equivalent as required in the Decision Document);

I certify by checking "YES" below that the O&M Plan Requirements (or equivalent as required in the Decision Document) are being met.

YES NO

4. If this site has a Monitoring Plan (or equivalent as required in the remedy selection document);

I certify by checking "YES" below that the requirements of the Monitoring Plan (or equivalent as required in the Decision Document) is being met.

YES NO

## Enclosure 2

### Certification Instructions

#### I. Verification of Site Details (Box 1 and Box 2):

Answer the six questions in the Verification of Site Details Section. Questions 5 and 6 only refer to sites in the Brownfield Cleanup Program. The Owner and/or Qualified Environmental Professional (QEP) may include handwritten changes and/or other supporting documentation, as necessary.

#### II. Certification of Institutional / Engineering Controls (Boxes 3, 4, and 5)

1. Review the listed IC/ECs, confirming that all existing controls are listed, and that all existing controls are still applicable. If there is a control that is no longer applicable the Owner / Remedial Party is to petition the Department requesting approval to remove the control.
2. In Box 5, complete certifications for all Plan components, as applicable, by checking the corresponding checkbox.
3. If you cannot certify "YES" for each Control and/or certify the other SM Plan components that are applicable, continue to complete the remainder of this Certification form. Attach supporting documentation that explains why the Certification cannot be rendered, as well as a statement of proposed corrective measures, and an associated schedule for completing the corrective measures. Note that this Certification form must be submitted even if an IC or EC cannot be certified; however, the certification process will not be considered complete until corrective action is completed.

If the Department concurs with the explanation, the proposed corrective measures, and the proposed schedule, a letter authorizing the implementation of those corrective measures will be issued by the Department's Project Manager. Once the corrective measures are complete, a new Periodic Review Report (with IC/EC Certification) is to be submitted within 45 days to the Department. If the Department has any questions or concerns regarding the PRR and/or completion of the IC/EC Certification, the Project Manager will contact you.

#### III. IC/EC Certification by Signature (Box 6 and Box 7):

If you certified "YES" for each Control, please complete and sign the IC/EC Certifications page. Where the only control is an Institutional Control on the use of the property the certification statement in Box 6 shall be completed and may be made by the property owner. Where the site has Institutional and Engineering Controls, the certification statement in Box 7 must be completed by a Professional Engineer or Qualified Environmental Professional (see table below).

Type of Control	Example of IC/EC	Required Signatures
EC which does not include a treatment system or engineered caps.	Fence, Clean Soil Cover, Individual House Water Treatment System, Vapor Mitigation System	A site or property owner or remedial party, and a QEP. (P.E. license not required)
EC that includes treatment system or an engineered cap.	Pump & Treat System providing hydraulic control of a plume, Part 360 Cap.	A site or property owner or remedial party, and a QEP with a P.E. license.

WHERE to mail the signed Certification Form and electronic copy by **Wednesday, December 1, 2010**:

New York State Department of Environmental Conservation  
625 Broadway, BURC  
Albany, NY 12233

Attn: Randy Whitcher, Project Manager

**Please note that extra postage may be required.**
