

(Fact Sheet Begins Next)

Act Now to Continue Receiving Information About This Site!

DEC's Division of Environmental Remediation (DER) now distributes information about contaminated sites *electronically by email*.

If you would like to continue to receive information about the contaminated site featured in this fact sheet:

You must sign up for the DER email listserv:

www.dec.ny.gov/chemical/61092.html

DER cannot register your email address - only the email address owner can do so. If you already have signed up for the listserv for the county in which the site is located, you need do nothing.

Why You Should Go “Paperless”:

- Get site information faster and share it easily;
- Receive information about all sites in a chosen county - read what you want, delete the rest;
- It helps the environment and stretches your tax dollars.

If “paperless” is not an option for you, call or write to the DER project manager identified in this fact sheet. Indicate that you need to receive paper copies of fact sheets through the Postal Service. Include the site name in your correspondence. The option to receive paper is available to individuals only. Groups, organizations, businesses, and government entities are assumed to have email access.

Interim Remedial Measure to Begin Public Comment Period Announced

The New York State Department of Environmental Conservation (NYSDEC), in consultation with the New York State Department of Health (NYSDOH), is announcing an expedited cleanup of contamination at the 950 5th Street site ("site") located at 950 5th Street, Watervliet, Albany County. Please see the map for the site location. NYSDEC is conducting a public comment period because this Interim Remedial Measure (IRM) is likely to represent a significant part of the cleanup for the site. The expedited cleanup activities are expected to begin in February 2024 and last about 2 months. The activities will be performed by Lincoln Avenue Development II, LLC ("applicant") with oversight provided by NYSDEC.

How to Comment: NYSDEC is accepting written comments about the proposed plan for 30 days, from **January 18, 2024**, through **February 18, 2024**

- Access the IRM Work Plan and other project documents online through the DECinfo Locator: <https://www.dec.ny.gov/data/DecDocs/C401082/>
- Documents also are available at the location(s) identified at left under "Where to Find Information."
- Please submit comments to the NYSDEC project manager listed under Project-Related Questions in the "Who to Contact" area at left.

Interim Remedial Measure (IRM) Work Plan: An IRM is a cleanup activity that may be performed when a source of contamination or exposure pathway (the way in which a person may contact contamination) can be effectively addressed without extensive investigation and evaluation.

The draft IRM work plan describes upcoming cleanup activities that include:

- Locating and removing possible Underground Storage Tanks (USTs);
- Locating and removing underground piping associated with former Aboveground Storage Tanks and refueling operations;
- Implementing a Health and Safety Plan and Community Air Monitoring Plan during all ground intrusive activities.

BROWNFIELD CLEANUP PROGRAM

Site Description: The 44.85-acre site is bound by a railroad siding and Lincoln Avenue to the west, 9th Avenue to the east, the Watervliet Arsenal to the north and northeast, and vacant land to the south. The Hudson River is approximately one-half mile east of the site. The site is currently mostly vacant and overgrown and contains several unoccupied structures, old foundations, and piles of debris and scrap materials. Previously, the site was part of a locomotive shop complex and railyard that operated throughout most of the 20th century.

Historical activities at the site included locomotive maintenance and fueling, as well as coal and ash storage.

The site historically contained extensive track lines and numerous structures, including a roundhouse, storehouse, powerhouse, foundry, oil houses and offices. Most of the structures have since been removed or destroyed. Use of the site by the locomotive industry ceased around 2010.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C401082) at:

<https://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=3>

Next Steps: NYSDEC will consider public comments, revise the plan as necessary, and approve the IRM work plan in consultation with the New York State Department of Health. The approved work plan will be made available to the public (see "Where to Find Information" on the front page).

When the expedited cleanup activities are completed, a Construction Completion Report will be prepared that documents the activities that were performed.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business, or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by DEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit:

<https://www.dec.ny.gov/chemical/8450.html>

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.
