**RE: Contained-In Determination Work Plan**  
NYSDEC BCP Site No. C828187  
3750 Monroe Avenue  
Town of Pittsford, New York 14534  
**LaBella Project No. 213131**

Dear Mr. Wilkie

LaBella Associates, D.P.C. ("LaBella") is pleased to submit this Contained-In Determination Work Plan on behalf of 3750 Monroe Avenue Associates, LLC, for NYSDEC Brownfield Cleanup Program Site No. C828187, located at 3750 Monroe Avenue, in the Town of Pittsford, Monroe County, New York, hereinafter referred to as the "Site."

## **INTRODUCTION**

---

This "Contained-In" Determination Work Plan (the "Plan") is being submitted to allow for the removal of investigation derived waste (IDW) that has been generated during past Interim Remedial Measure (IRM) and Remedial Investigation (RI) activities at the Site. This Plan has been prepared to be in accordance with the criteria defined in NYSDEC Technical and Administrative Guidance Memorandum (TAGM) 3028.

### Site Description and History

The Site is 9.37 acres in size, within a larger 42-acre tax parcel. The central features of the Site are a 265,880 square foot one-story building, a parking lot located on the west side of the building, and an unnamed tributary of Allen Creek that flows from east to west (and forms part of the northern boundary of the Site). The larger parcel within which the Site exists includes additional parking areas and a large undeveloped area on the northern part of the property.

The Site is located in a suburban area. The on-site building is subdivided and leased to tenants for commercial and industrial use. The broader tax parcel is bound by Monroe Avenue to the southwest, by a Rochester Gas and Electric (RG&E) transmission line to the northeast, by vacant property and a developed commercial property to the southeast, and by several residential properties developed with apartment complexes to the northwest.

Prior to 1956 the Site was used for agricultural purposes. The existing building was originally constructed in approximately 1956 and primarily used for plating and printing operations from 1956 to at least 1979, and has since been used for various industrial and commercial purposes including printing. Some operations included degreasing processes that utilized chlorinated solvents. Historical records indicate the former presence of a cyanide wastewater treatment process,

degreasing operations that used chlorinated solvents, metal plating, a 2,000 gallon gasoline underground storage tank, transformers, and hazardous waste storage areas.

A Phase I Environmental Site Assessment (ESA) of the Site was completed in 2012 and identified environmental concerns stemming from the property's manufacturing history. A subsequent Phase II ESA identified elevated levels of chlorinated solvents in the soil and groundwater. Based on this finding, the owner notified the State and submitted a BCP application.

## **SUMMARY OF INVESTIGATIONS AND ACTIVITIES**

---

Subsequent environmental investigations / activities at the Site have included:

- Interim Remedial Measure (IRM) Design Phase Investigation (DPI), in 2014
- IRM Sub-Slab Depressurization System (SSDS) Design and Installation, in 2015
- Remedial Investigation activities, in 2017
- SSDS modifications, in 2020

Based on the activities that have occurred to date, the primary contaminants of concern at the Site include trichloroethene (TCE) and associated degradation products.

### Soil

TCE is found in soil at depths of approximately 6 to 12 feet below ground, with the highest concentrations located under the center-west portion of the building (with a maximum concentration of 16 ppm, exceeding the applicable soil cleanup objective of 0.47 ppm).

### Groundwater

TCE and its associated degradation products were found in groundwater at concentrations significantly exceeding applicable groundwater standards (with a maximum concentration of 130,000 ppb versus a standard of 5 ppb). The TCE plume in the shallow groundwater zone (to depths of about 16 feet) appears to have migrated from under the on-site building to the BCP Site boundary about 340 feet northwest of the building. The extent of chlorinated solvent migration in groundwater has not been defined as up to 402 ppb of TCE was detected at the BCP boundary. Based on one deeper well (18 to 23 feet) located approximately mid-plume, the TCE concentrations appear to be decreasing with depth.

### Indoor Air

TCE was detected in the indoor air of the 3750 Monroe Avenue building at concentrations exceeding the New York State Department of Health (NYSDOH) guideline value of 2 micrograms per cubic meter in 2014. After installation of the SSDS in 2014-2015, indoor air sampling results were below the NYSDOH guideline value.

## **PROPOSED CONTAINED-IN SAMPLING**

---

A total of thirteen (13) 55-gallon drums of soil and concrete from IRM, RI, and SSDS installation / upgrading activities have been generated at the Site to date. It is estimated that approximately 5 cubic yards of material are contained within the drums, which are currently stored in a CONEX box on the northern portion of the Site.

Prior to sampling for the Contained-In Determination, drummed soils will be consolidated into a roll-off dumpster on the Site.

According to NYSDEC DER-10 Table 5.4(e) 10 “Recommended Number of Soil Samples for Soil Imported To or Exported From a Site”, one (1) sample is adequate for up to 50 cubic yards of material.

Since previous investigations have identified VOCs as the contaminant of concern, the sampling will be limited to VOCs. The following sampling protocol is proposed:

- One (1) discrete sample for United States Environmental Protection Agency (USEPA) Target Compound List (TCL) VOCs using USEPA Method 8260; and,
- One (1) discrete sample for Toxicity Characteristic Leaching Procedure (TCLP) TCL VOCs using USEPA Method 1311/8260.

This sampling will be conducted in order to characterize the waste for appropriate disposal and to compare the results against the Contained-In Criteria identified in NYSDEC TAGM 3028. The samples will be delivered under strict Chain-of-Custody procedures to an Environmental Laboratory Accreditation Program (ELAP)-certified laboratory.

Upon completing the proposed sampling and upon receipt of analytical results, LaBella will submit a contained-In Request that provides the laboratory report and comparison to applicable Contained-In Criteria. Currently, it is anticipated that this request will be submitted in March, 2021.

If you should require additional information pertaining to the Site or this request, please contact me directly at (607) 280-2628.

Respectfully submitted,

LABELLA ASSOCIATES, D.P.C.

  
Drew Brantner  
Junior Project Manager

Notes:

VOC analysis via USEPA Method 8260. Samples collected via USEPA Method 5035.

Grey shaded values are above NYCRR Part 375 6.8(a) Unrestricted Use SCOs or indicated CP-51 SSCO.

Yellow shaded values are above NYCRR Part 375 6.8(b) Commercial Use SCOS and NYCRR Part 375 6.8(a) Unrestricted Use SCOs.

Red font indicates values above NYCRR Part 375-6.8(b) Protection of Groundwater SCO

NA - Not applicable/not listed

Notes:

Pesticide analysis via USEPA Method 8081.

Grey shaded values are above NYCRR Part 375 6.8(a) Unrestricted Use SCOs or indicated CP-51 SSCO.

Yellow shaded values are above NYCRR Part 375 6.8(b) Commercial Use SCOs and NYCRR Part 375 6.8(a) Unrestricted Use SCOs.

Red font indicates values above NYCRR Part 375-6.8(b) Protection of Groundwater SCO

U - Not detected at the reported detection limit for the sample.

J – Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.

NA - Not applicable/Not listed/Not analyzed

<sup>1</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Protection of Ecological Resources value shown

<sup>2</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Residential value shown

<sup>3</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Protection of Groundwater value shown

\* indicates the compound was not detected above reported laboratory detection limit; however, detection limit is above NYCRR Part 375 Unrestricted Use, Protection of Groundwater and/or Commercial use SCOS

Notes:  
 Pesticide analysis via USEPA Method 8081.

Grey shaded values are above NYCRR Part 375 6.8(a) Unrestricted Use SCOs or indicated CP-51 SSCO.

Yellow shaded values are above NYCRR Part 375 6.8(b) Commercial Use SCOs and NYCRR Part 375 6.8(a) Unrestricted Use SCOs.

Red font indicates values above NYCRR Part 375-6.8(b) Protection of Groundwater SCO

U - Not detected at the reported detection limit for the sample.

J - Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.

NA - Not applicable/Not listed/Not analyzed

<sup>1</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Protection of Ecological Resources value shown

<sup>2</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Residential value shown

<sup>3</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Protection of Groundwater value shown

\* indicates the compound was not detected above reported laboratory detection limit; however, detection limit is above NYCRR Part 375 Unrestricted Use, Protection of Groundwater and/or Commercial use SCOS

J0 - Calibration verification outside of acceptance limits. Result is estimated

J3 - the associated batch QC was outside the established quality control range for precision

J4 - the associated batch QC was outside the established quality control range for accuracy

J6 - the sample matrix interfered with the ability to make an accurate determination; spike value is low

V - the sample concentration is too high to evaluate accurate spike recoveries

## Notes:

Metal analysis via USEPA Methods 6010, 7471.

Cyanide analysis via USEPA Method 9010B/9012A.

Grey shaded values are above NYCRR Part 375 6.8(a) Unrestricted Use SCOs or indicated CP-51 SSCO.

Yellow shaded values are above NYCRR Part 375 6.8(b) Commercial Use SCOs and NYCRR Part 375 6.8(a) Unrestricted Use SCOs.

Red font indicates values above NYCRR Part 375-6.8(b) Protection of Groundwater SCO

NA - Not Applicable/Not Listed

U - Not detected at the method quantification limit (MQL) for the sample.

J – Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.

ND - Not detected at the reported detection limit for the sample.

<sup>1</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Protection of Ecological Resources value shown<sup>2</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Residential value shown

JO = Calibration verification outside of acceptance limits. Result is estimated.

J3 = The associated batch QC was outside the established quality control range for precision

J5 = The sample matrix interfered with the ability to make any accurate determination; spike value is high

J6 = The sample matrix interfered with the ability to make any accurate determination; spike value is low

V = The sample concentration is too high to evaluate accurate spike recoveries

O1 = The analyst failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.

B = The same analyte is found in the associated blank

P1 = RPD value not applicable for sample concentrations less than 5 times the reporting limit.

\* indicates the compound was not detected above reported laboratory detection limit; however, detection limit is above NYCRR Part 375 Unrestricted Use, Protection of Groundwater and/or Commercial use SCOS

Notes:  
Pesticide analysis via USEPA Method 8081.  
Grey shaded values are above NYCRR Part 375 6.8(a) Unrestricted Use SCOs or indicated CP-51 SSCO.  
Yellow shaded values are above NYCRR Part 375 6.8(b) Commercial Use SCOs and NYCRR Part 375 6.8(a) Unrestricted Use SCOs.  
Red font indicates values above NYCRR Part 375-6.8(b) Protection of Groundwater SCOs.  
U - Not detected at the reported detection limit for the sample.  
J - Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.  
P - The RPD between the results for the two columns exceeds the method-specified criteria.  
<sup>1</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Protection of Ecological Resources value shown.  
<sup>2</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Residential value shown.  
<sup>3</sup>Indicates no Part 375 value for indicated compound; NYSDEC CP-51 SSCO Protection of Groundwater value shown.  
R - Rejected ("R" qualifier) during preparation of the DUSR.  
\* indicates the compound was not detected above reported laboratory detection limit; however, detection limit is above NYCRR Part 375 Unrestricted Use, Protection of Groundwater and/or Commercial use SCOS.

Notes:  
 Pesticide analysis via USEPA Method 8081.

Grey shaded values are above NYCRR Part 375 6.8(a) Unrestricted Use SCOs or indicated CP-51 SSCO.

Yellow shaded values are above NYCRR Part 375 6.8(b) Commercial Use SCOs and NYCRR Part 375 6.8(a) Unrestricted Use SCOs.

Red font indicates values above NYCRR Part 375-6.8(b) Protection of Groundwater SCO

U - Not detected at the reported detection limit for the sample.

J - Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

\* Indicates no Part 375 value for indicated compound; NYSDDEC CP-51 SSCO Protection of Ecological Resources value shown

<sup>2</sup>Indicates no Part 375 value for indicated compound; NYSDDEC CP-51 SSCO Residential value shown

<sup>3</sup>Indicates no Part 375 value for indicated compound; NYSDDEC CP-51 SSCO Protection of Groundwater value shown

R - Rejected ("R" qualifier) during preparation of the DUSR.

\* indicates the compound was not detected above reported laboratory detection limit; however, detection limit is above NYCRR Part 375 Unrestricted Use, Protection of Groundwater and/or Commercial use SCOS

Notes:  
 Metal analysis via USEPA Methods 6010, 7471.

Cyanide analysis via USEPA Method 3010B/9012A.

Grey shaded values are above NYCRR Part 375 6.8(a) Unrestricted Use SCOS or indicated CP-51 SSCO.

Yellow shaded values are above NYCRR Part 375 6.8(b) Commercial Use SCOS and NYCRR Part 375 6.8(e) Unrestricted Use SCOS.

Red font indicates values above NYCRR Part 375 6.8(b) Protection of Groundwater SCOS.

NA - Not applicable/not listed.

U - Not detected at the reported detection limit for the sample.

J - Indicates that the constituent was positively identified; but the associated numerical value is the approximate concentration of the constituent in the sample.

<sup>1</sup>Indicates no Part 375 value for indicated compound; NYSDCC CP-51 SSCO Protection of Ecological Resources value shown

<sup>2</sup>Indicates no Part 375 value for indicated compound; NYSDCC CP-51 SSCO Residential value shown

<sup>3</sup>Indicates no Part 375 value for indicated compound; NYSDCC CP-51 SSCO Protection of Groundwater value shown

\* indicates the compound was not detected above reported laboratory detection limit; however, detection limit is above NYCRR Part 375 Unrestricted Use, Protection of Groundwater and/or Commercial use SCOS
