1.0 EXECUTIVE SUMMARY

This Periodic Review Report (PRR) is a required element of the approved Site Management Plan (SMP) for the Tecumseh Phase I Business Park Site I-1. This New York State Brownfield Cleanup Program (BCP) site was remediated in accordance with Brownfield Cleanup Agreement (BCA) Index No. B9-0696-05-06(A), which was executed on December 12, 2005 and amended on August 22, 2012 and December 12, 2017.

1.1 Site Summary

Site I-1 (hereafter referred to as the “Site”) encompasses approximately 5.57 acres of a former industrial site in the City of Lackawanna, Erie County New York that was historically occupied by an integrated steel mill operated by the Bethlehem Steel Corporation (BSC). The Site is one of multiple parcels on the former BSC property acquired by the Buffalo and Erie County Industrial Land Development Corporation (ILDC) for redevelopment and use as a business park. Historically, the Site was part of a large industrial complex that contained numerous buildings and facilities, none of which currently remain on the Site. The BSC property was the subject of assessments and investigations under the Resource Conservation and Recovery Act (RCRA) and the area containing the Site received a “No Further Assessment” designation from the U.S. Environmental Protection Agency (USEPA) in the early 1990s and was excluded from the RCRA Order by USEPA in 2001. In 2005, Tecumseh Redevelopment Inc. (Tecumseh) entered an approximate 102-acre portion of the BSC property containing the Site and referred to as the Phase I Business Park in the BCP.

The Remedial Investigation (RI) conducted on the Phase I Business Park property between 2006 and 2008 revealed that contamination associated with historical steel mill operations had impacted the soil/fill on the property, necessitating remedial action. The RI did not identify groundwater impacts on the Phase I Business Park property. Remedial actions were undertaken in 2009 for Business Park I in accordance with a NYSDEC-approved Interim Remedial Measures (IRM) Work Plan. Following completion of the remedial work, some contamination was left in the soil/fill of the Site, which is hereafter referred to as the “remaining contamination”. The remaining contamination was generally characterized by widespread exceedances of the 6 New York Codes, Rules and Regulation (NYCRR) Part 375 Soil Cleanup Objectives (SCOs) for un-restricted use for certain metals and polycyclic aromatic hydrocarbons (PAHs) to the approximate native soil depth of 8 feet below the ground surface. The remedial efforts also included development of a SMP to manage the remaining contamination at the Site in perpetuity or until extinguishment of the Environmental Easement that was placed on the Site in accordance with Environmental Conservation Law (ECL) Article 71, Title 36. The placement of a cover system comprised of 12 inches of clean soil, stone or NYSDEC-approved material, with a demarcation layer in all areas that are not paved or covered by concrete or structures was prescribed for the Site prior to occupancy.

With NYSDEC’s approval, Tecumseh subsequently subdivided Business Park I into 11 individual BCP sites (Sites I-1, I-2, I-3, I-4, I-5, I-6, I-7, I-8, I-9, I-10, and I-11) in 2012. The original BCA was amended to cover Site I-1, with separate BCAs executed for the remaining 10 BCP sites (i.e., Sites I-2 through I-11). In 2017, the cover system was placed on the Site, the Site was acquired by the ILDC and a BCP Certificate of Completion (COC) was issued, signifying satisfactory completion of the remedial program and acceptance of the Final Engineering Report (FER) for the Site.

1.2 Effectiveness of Remedial Program

Based on a recent inspection of the Site, the engineering and institutional controls are in place, are performing properly, and remain effective and protective of public health and the environment.

1.3 Non-Compliance

No areas of non-compliance regarding the major elements of the SMP were identified during the preparation of this PRR.

1.4 Recommendations

Overall, the remedial program is viewed to be effective in achieving the remedial objectives for the Site. No changes to the SMP or the frequency of PRR submissions are recommended at this time.

2.0 SITE OVERVIEW

2.1 Site Description

The Site is part of a larger property owned by the ILDC and located at 2303 Hamburg Turnpike in the City of Lackawanna, New York. Figure 1 shows the approximate location of the ILDC property, Figure 2 depicts the configuration of the Phase I Business Park and all 11 individual BCP sites, and Figure 3 illustrates the configuration of the approximate 5.57 acre Site. The Site is bounded to the north and west by an access road and undeveloped land that constitutes BCP Site I-3; to the east by undeveloped land that constitutes BCP Site I-2; and to the south by undeveloped land comprising portions of the Phase II Business Park. Active industrial property is located west of the Site beyond the adjoining parcels, while commercial and residential properties are located east of the Site, beyond Fuhmann Boulevard and the Hamburg Turnpike (NY Route 5). Lake Erie is situated approximately 4,500 feet to the west of the Site, while Smoke Creek is located approximately 2,000 feet south of the Site.

Although no “source area” contamination was identified on the Site, soil/fill on the Site and surrounding parcels was generally impacted by the historical industrial usage of the BSC property. These impacts were characterized as widespread exceedances of the 6 NYCRR Part 375 SCOs for un-restricted use for certain metals and PAHs to the approximate native soil depth of 8 feet below the ground surface. The impacted soil/fill constitutes the remaining contamination on the Site. No groundwater contamination necessitating remediation was identified on the Site.

2.2 Summary of Remedial Actions

No IRMs were conducted at the Site. The final remedy implemented at the Site in 2017 involved the installation of a cover system in accordance with the NYSDEC-approved Remedial Action Work Plan (RAWP). The cover system installed at the Site consists of a minimum of 12 inches of steel slag, authorized by NYSDEC under Beneficial Use Determination (BUD) #555-9-15, placed over a demarcation layer. The existing asphalt and sub-base material associated with the access road that extends along the northern and western margins of the Site is also considered a component of the Site cover system.

In addition to the cover system, an environmental easement was placed on the Site, recorded with the Erie County Clerk and mandates compliance with the NYSDEC-approved SMP and all engineering and institutional controls placed on the Site. The SMP specifies the procedures required to manage

the remaining contamination on the Site post remediation, including (1) implementation and management of all engineering and institutional controls; (2) media monitoring, if applicable; (3) operation and maintenance of treatment, collection, containment or recover systems, if applicable; (4) performance of periodic inspections, certification of results and submittal of PRRs; and (5) defining criteria for termination of any remaining treatment system operations.

3.0 PERFORMANCE, EFFECTIVENESS & PROTECTIVENESS OF THE REMEDY

All remedial actions prescribed in the RAWP for the Site were completed and the remedial goals were accomplished through the installation of the Site-wide cover system to prevent exposure to remaining contamination in the subsurface.

As indicated below in Section 4.1.2, the Site cover system was inspected on March 24, 2020. Based on this inspection, the cover system is intact, functioning effectively throughout the Site and is protective of public health and the environment.

4.0 INSTITUTIONAL/ENGINEERING CONTROL (IC/EC) PLAN COMPLIANCE REPORT

4.1 IC/EC Requirements and Compliance

4.1.1 IC Requirements-Site Restrictions

In accordance with the SMP, a series of Institutional Controls (ICs) have been established for the Site. Adherence to these ICs is required by the Environmental Easement. The Environmental Easement is described on the Boundary Survey of the Phase I Business Park Site, included within Appendix 1. These ICs are:

- Compliance with the environmental easement and the SMP by the Owner and the Owner's successors and assigns;
- All Engineering Controls (ECs) must be installed, operated and maintained as specified in the SMP;
- All ECs on the Site must be inspected at a frequency and in a manner defined in the SMP;
- Environmental or public health monitoring must be performed as defined in the SMP; and
- Data and information pertinent to site management of the Site must be reported at the frequency and in a manner defined in the SMP.

Institutional Controls identified in the environmental easement may not be discontinued without an amendment to or extinguishment of the environmental easement.

The Site has a series of Institutional Controls (ICs) in the form of restrictions. Site restrictions that apply are as follows:

- The Site may only be used for commercial or industrial purposes as defined by Part 375-1.8(g), and that conform to local zoning laws;
- The use of groundwater underlying the Site is restricted as a source of potable or process water, without necessary water quality treatment, as determined by the New York State Department of Health or Erie County Health Department;
- Compliance with the SMP is required; and

- The Site owner is required to provide an IC/EC certification, prepared and submitted by a professional engineer or environmental professional acceptable to the NYSEC annually or for a period to be approved by the NYSDEC, which will certify that the ICs and ECs put in place are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP.

LaBella has concluded that the ICs are in force and are being adhered to with respect to the condition and use of the Site and activities conducted thereon.

4.1.2 Engineering Control-Soil Cover System

Exposure to the remaining contamination in soil/fill at the Site is prevented by a cover system that was previously placed over the Site. This cover system is comprised of a minimum of 12 inches of BUD #555-9-15 material overlaying a demarcation layer (orange plastic mesh material) over the entire surface of the Site that is not covered by existing asphalt and sub-base materials associated with the access road located along the northern and western Site margins. The Excavation Work Plan, which appears in Appendix B of the SMP, outlines the procedures that are required to be implemented in the event the cover system is breached, penetrated or temporarily removed, and any underlying remaining contamination is disturbed. The cover system is a permanent control and the quality and integrity of this system will be inspected at defined, regular intervals in perpetuity.

On March 24, 2020, Mr. Andrew Benkelman, EIT of LaBella conducted the annual Site inspection, which included traversing the Site on foot to observe the current conditions. The Cover Inspection Form is included herein as Appendix 2. Appendix 3 includes photographs taken during the Site inspection.

With the exception of the access road corridor that extends along the northern and western margins of the Site, the Site is generally vacant and undeveloped, with slag cover occurring at the ground surface. The cover system at the time of the Site inspection was observed to be intact and functioning as intended. Furthermore, the asphalt road surface was observed to be in fair condition.

4.2 IC/EC Certification

The IC/EC Certification Form was completed in its entirety as all ICs/ECs are in place for the Site per the SMP. Appendix 4 includes the signed NYSDEC Site Management Periodic Review Report Notice-Institutional and Engineering Controls Certification Form.

5.0 MONITORING PLAN COMPLIANCE REPORT

5.1 Requirements

The Monitoring Plan is included in Section 3.0 of the SMP and describes the measures for evaluating the performance and effectiveness of: the remedy to reduce or mitigate contamination at the Site, the soil cover system, and all affected Site media.

The Monitoring Plan describes the methods to be used for:

- Monitoring the cover system;
- Assessing achievement of the remedial performance criteria;
- Evaluating Site information periodically to confirm that the remedy continues to be effective in protecting public health and the environment; and,
- Preparing the necessary reports for the various monitoring activities.

To adequately address these issues, the Monitoring Plan provides information on:

- Annual inspection and periodic certification.

5.2 Comparisons with Remedial Objectives

Cover system monitoring was performed in accordance with the SMP, and included the annual visual inspection of the cover system components. As described in Section 4.1.2, the cover system was observed to be intact and functioning as intended, and is continuing to satisfy the remedial objectives for the Site.

5.3 Monitoring Deficiencies

No monitoring deficiencies were noted or experienced during the inspection of the cover system or completion of the PRR.

5.4 Monitoring Conclusions and Recommendations

The procedures utilized to evaluate the performance and effectiveness of the cover system were conducted in accordance with the SMP and verified that the cover system is functioning as intended. No changes to the monitoring plan are recommended.

6.0 OPERATION AND MAINTENANCE PLAN

The remedy for the Site does not rely on mechanical systems to protect public health and the environment. Therefore, no operation and maintenance requirements apply to the Site.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Annual inspection of the Site was performed on March 24, 2020 by LaBella Associates, DPC as prescribed in the SMP. As a result of this inspection, LaBella has determined that the Site is in compliance with all elements of the SMP, including the Engineering & Institutional Control Plan, the Site Monitoring Plan and the Operations & Maintenance Plan. No deficiencies or failures to satisfy the requirements of the SMP were identified.

As reflected by the signed Institutional and Engineering Controls Certification Form (Appendix 4), LaBella has concluded that:

- The required EC/ICs are in place, are performing properly, and remain effective;
- The Site Monitoring Plan is being implemented;

- Operation and Maintenance activities are being conducted properly; and
- The remedy continues to be protective of public health and the environment and is performing as specified in the RAWP and FER.

No changes to the inspection, reporting or certification frequency prescribed in the SMP are recommended.

8.0 LIMITATIONS

The conclusions presented in this report are based on information gathered in accordance with generally acceptable professional consulting principles and practices. All conclusions reflect observable conditions existing at the time of the Site inspection. Information provided by outside sources (individuals, agencies, laboratories, etc.) as cited herein, was used in the assessment of the Site. The accuracy of the conclusions drawn from this assessment is, therefore, dependent upon the accuracy of information provided by these sources. Furthermore, LaBella is not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to the performance of services.

This report is based upon the application of scientific principles and professional judgment to certain facts with resultant subjective interpretations. Professional judgments expressed herein are based upon the facts currently available with the limits of the existing data, scope of services, budget and schedule. To the extent that more definitive conclusions are desired by the Client than are warranted by the current available facts, it is specifically LaBella's intent that the conclusions and recommendations stated herein will be intended as guidance and not necessarily a firm course of action except where explicitly stated as such. LaBella makes no warranties, expressed or implied including without limitation, warranties as to merchantability or fitness of a particular purpose. Furthermore, the information provided in this report is not to be construed as legal advice.

This inspection and report have been completed and prepared on behalf of and for the exclusive use of the Buffalo and Erie County Industrial Land Development Corporation. Any reliance on this report by a third party is at such party's sole risk.

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;

b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and complete.

YES NO

2. If this site has an IC/EC Plan (or equivalent as required in the Decision Document), for each Institutional or Engineering control listed in Boxes 3 and/or 4, I certify by checking "YES" below that all of the following statements are true:

(a) the Institutional Control and/or Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

(b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

(c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

(d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

(e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES NO

IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.
