Draft Investigation Work Plan and Interim Remedial Measure (IRM) for Brownfield Site Available for Public Comment

The public is invited to comment on a draft work plan being reviewed by the New York State Department of Environmental Conservation (DEC) to investigate the Queen City Landing site ("site") located at 975 and 1005 Fuhrmann Boulevard, Buffalo, Erie County. Please see the map for the site location. Documents related to the cleanup of this site can be found at the location(s) identified below under "Where to Find Information."

Draft Investigation Work Plan

The draft investigation work plan, called a "Remedial Investigation Work Plan," was submitted to DEC under New York's Brownfield Cleanup Program. The investigation will be performed by Queen City Landing, LLC ("applicant(s)") with oversight by DEC and New York State Department of Health (DOH).

How to Comment

DEC is accepting written comments about the draft investigation work plan for 30 days, from **July 26, 2016** through **August 23, 2016**. The proposed plan is available for review at the location(s) identified below under "Where to Find Information." Please submit comments to the DEC project manager listed under Project Related Questions in the "Who to Contact" area below.

Highlights of the Proposed Site Investigation and IRM

The investigation will define the nature and extent of contamination in soil, surface water, groundwater and any other parts of the environment that may be affected. The RI work will include:

Geophysical survey
Surface and subsurface soil sampling
Spill Area Delineation
Groundwater Monitoring

IRM: Removal of petroleum contaminated soils from the spill area.

Next Steps

DEC will consider public comments, revise the plan as necessary, and approve the work plan. DOH must concur with the plan. The approved work plan will be made available to the

public (see "Where to Find Information" below). After the work plan is approved, the activities detailed in the work plan will be implemented.

When the investigation is completed, a report will be prepared and submitted to the DEC that summarizes the results. DEC will review the report, make any necessary revisions and, if appropriate, approve the report.

After the investigation, a cleanup plan, called a "Remedial Work Plan" will be developed and a Decision Document will be proposed. The cleanup plan will include an evaluation of the proposed site remedy, or recommend a no action or no further action alternative. The goal of the cleanup plan is to ensure the protection of public health and the environment. DEC will present the proposed cleanup plan to the public for its review and comment during a 45-day comment period. DEC will keep the public informed throughout the investigation and cleanup of the site.

Background

Location:

The Site is located in the City of Buffalo on Fuhrmann Boulevard, just north of the Port of Buffalo Small Boat Harbor and Tifft Nature Preserve. The entrance to the parcel is just north of the intersection of Fuhrmann Boulevard and Ohio Street.

Site Features:

The Site is improved with a large manufacturing building, a small office building, two connected parking lots, and a former water treatment facility. The Site fronts to Fuhrmann Boulevard. The majority of the remainder of the site is surrounded by Lake Erie (Buffalo Outer Harbor). As noted above, the tax parcel will be subdivided so that the western boundary of the BCP Site will be land; not the Buffalo Outer Harbor.

Current Zoning and Land Use:

The Site is currently zoned as CM General Commercial. Surrounding parcels are a mix of industrial, commercial, and park and recreation land uses.

Past Use of the Site:

The Phase I ESA indicated that the BCP Site was occupied by a portion of a shipping terminal and then a food manufacturing facility since 1927. Freezer Queen owned the property for food manufacturing from 1958 to 2004. Olsen Marine used the property for boat repair and storage until September 2015.

Contamination at the site appears to be from the use of various sources of urban fill to create land for the original shipping terminal facility and from the presence and use of petroleum products related to the use of machinery and rail service.

Site Geology and Hydrogeology:

The Queen City Landing Site contains urban fill across the site with observed thickness ranging up to twenty feet. Water was observed in site investigations to be approximately 7 to 12 feet below grade. The groundwater flows towards Lake Erie.

Additional site details, including environmental and health assessment summaries, are available on DEC's website at http://www.dec.ny.gov/chemical/107044.html and http://www.dec.ny.gov/cfmx/extapps/derexternal/haz/details.cfm?pageid=3&progno=C915304

Brownfield Cleanup Program: New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business or other uses.

A **brownfield** site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by DEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit: http://www.dec.ny.gov/chemical/8450.html
