Re: Limited Phase II Site Investigation Report  
Spill No. 15-00185  
1661 Main Street Site  
Buffalo, New York

Dear Mr. Sinatra:

At your request, TurnKey Environmental Restoration, LLC (TurnKey) has completed a limited subsurface investigation of the subject property, addressed at 1661 Main Street, Buffalo New York (Site) in accordance with our November 17, 2014 proposal. A description of the investigation and discussion of the findings is presented in the sections below.

### **Site Description and Background**

The Site is comprised of an approximate 0.4 acre parcel located at the corner of Main Street and East Balcom Street, in the City of Buffalo, New York (see Figures 1 and 2). The majority of the Site is covered by the commercial building with an asphalt and concrete parking/loading dock area along E. Balcom Street.

A November 2014 Phase I Environmental Site Assessment (ESA) performed by TurnKey including the 1661 Main Street Site indicated that the Site was used as a commercial storage since at least 1915.

Recognized Environmental Conditions (RECs) identified for the Site included the following:

- An inactive above-ground storage tank (AST) was noted in the basement boiler room of the building. The AST is surrounded by a low concrete wall (enclosure) and is not directly visible when entering the boiler/mechanical room. Suspect petroleum-like odors were noted within the tank enclosure and petroleum product/staining was noted on the exterior of the tank and floor surrounding the AST, with wood chips present (assumed for absorbent purposes). Concrete floor patches leading from the AST enclosure, assumed to be related to the former boiler, were visible. Disconnected fuel

lines were also visible. One vent/fill pipe was visually traced through the building and appears to exit the building to the north along E. Balcom Street.

- Three (3) exterior vent and/or fill pipes were visually evident protruding from below grade next to a building man-door along E. Balcom Street. It is assumed at least one (1) of the lines is associated with the AST located in the basement, and the remaining pipes are unknown.
- City of Buffalo Building Department and Fire Prevention office records indicate the presence of at least one (1), and potentially up to three (3) underground storage tanks (USTs), and at least one (1) dispenser pump in the exterior parking/loading dock area along E. Balcom Street.

Based on the findings of Phase I ESA, TurnKey recommended completion of a Limited Phase II Environmental Site Investigation.

### **Limited Environmental Site Investigation Activities**

A Limited Phase II Environmental Site Investigation was completed on March 23, 2015. Two (2) soil borings (SB-01 and SB-02) were completed in the basement of the building boiler room and six (6) soil borings, (SB-03 through SB-08) were completed in the exterior asphalt parking/loading dock area along E. Balcom Street (see Figure 2).

It should be noted that SB-08 consisted of six (6) shallow borings where equipment refusal was encountered at 3.5 feet below ground surface (fbgs). Exterior and interior boreholes were advanced from the surface into native soils with bottom target depths of approximately 12 fbs and 8 fbs, respectively. All boreholes were completed using hydraulically driven direct push drill rigs with a continuous macro-core sampler. Specifically, the interior borings used 2-foot sample cores and the exterior borings used 4-foot sample cores. Samples were retrieved from the boring locations in clear PVC sleeves to allow for field characterization of the subsurface lithology and collection of soil samples. TurnKey personnel scanned each core sample for total volatile organic vapors with a photoionization detector (PID) and recorded visual and/or olfactory observations. Photolog is included in Attachment 1.

### **Field Observations**

In general, the two (2) interior borings indicated the presence of native sand beneath the approximately 6-inch thick concrete floor slab. SB-01 was advanced to approximately 8 feet below grade, and SB-02 was advanced to approximately 2.5 feet below slab before equipment refusal on unknown structure. Field evidence of petroleum-like odors with elevated PID readings were noted in both interior boring locations, with elevated PID readings as high as 390 ppm (SB-01).

The exterior soil borings were completed across the asphalt parking area along E. Balcom Street in the area of suspect tanks (see Figure 2). Boreholes were advanced from the surface

to target depths of approximately 12 feet below ground surface (fbgs). In general, the borings indicated the presence of 0-2 feet of reworked soil/fill material beneath the asphalt/subbase overlying reddish brown clay and sand to 12 fbs, with the exception of SB-08. It should be noted that a subsurface structure was encountered approximately 3 fbs when advancing SB-03 and SB-08 (between the exterior vent/fill ports and E. Balcom Street). Multiple attempts were made to define the extents of the structure (see Figure 2), however SB-08 encountered equipment refusal at approximately 3 fbs at each attempted locations. Based on the presence of subgrade utilities and property boundary related to SB-08, we were unable to further investigate the area during the investigation.

However, based on the historic municipal records, the presence of unknown vent/fill lines, and multiple equipment refusal, it is likely that a underground structure (e.g., underground storage tank) is present in the vicinity of SB-08. Further assessment of this area is recommended.

### **Soil Sampling Approach and Analytical Results**

Three (3) soil boring locations were selected for laboratory analysis, including SB-01, SB-02 and SB-03. The soil/fill samples were analyzed for New York State Department of Environmental Conservation (NYSDEC) CP-51 List semi volatile organic compounds (SVOCs), and SB-02 was also analyzed for CP-51 List volatile organic compounds (VOCs). Soil samples were transferred to the laboratory-provided sampling containers, cooled to 4°C in the field, and transported under Chain of Custody to Test America Laboratories, Inc., located in Amherst New York for analysis.

Analytical results are summarized on Table 1 with a comparison to NYSDEC CP-51 Soil Cleanup Levels (SCLs). A copy of the laboratory analytical data package is included electronically in Attachment 2.

As summarized on Table 1, analytical results indicate elevated naphthalene above the CP-51 SCL in SB-01. Based on the presence of AST in the basement, visual evidence of petroleum product exterior of the AST, the presence of stained wood chips within the AST enclosure, olfactory and elevated PIDs readings from the borings completed in the boiler room proximate to the AST, and the elevated analytical result above CP-51 guidelines, the NYSDEC was notified and Spill No. 1500185 was assigned to the Site.

### **Summary and Recommendations**

Based on the results of this investigation, TurnKey offers the following summary and recommendations:

#### **Summary**

- Apparent petroleum contamination, including elevated PID readings and petroleum odors, was observed in SB-1 and SB-2, located adjacent to the AST.

- Visual evidence of petroleum product exterior of the AST, and the presence of petroleum-stained wood chips are indications of apparent release.
- Elevated concentrations of naphthalene, a common fuel oil associated contaminant was detected above NYSDEC CP-51 in SB-1.
- Presence of suspect subgrade structure(s) on the exterior of the property adjacent to existing vent/fill ports (potential filled tank/tank vault).
- NYSDEC Spill No. 1500185 was issued for the Site.

### **Recommendations**

- If not intended for future use, the AST and all appurtenant piping and contents should be removed from the basement in accordance with NYSDEC protocols. Removal of the AST will allow for inspection of the underlying floor for evidence of petroleum release and/or potential source area. If impacted soil/fill is encountered, handling and disposal should be completed in accordance with all local, state and federal regulations.
- During redevelopment activities in the E. Balcom parking lot area, an assessment of the orientation and disposition of the suspect exterior vent and fill ports is recommended. Additional exploration of the subgrade structure(s) is also recommended at that time.
- Since the site is intended for future residential use, completion of a Soil Vapor Intrusion (SVI) investigation should be considered.
- The findings of this report should be provided to the NYSDEC for review and comment.
- TurnKey understands that the Site may be redeveloped for residential use. Given the known contamination and likely additional environmental work to remove tank and/or contaminated soil, consideration should be given to applying to the New York Brownfield Cleanup Program (BCP) prior to Site redevelopment.

### **Declaration /Limitations**

This report has been prepared for the exclusive use of Sinatra and Company Real Estate, LLC. The contents of this report are limited to information available at the time of the site investigation activities and to data referenced herein, and assume all referenced historic information sources to be true and accurate. The findings herein may be relied upon only at

the discretion of Sinatra and Company Real Estate, LLC. Use of or reliance upon this report or its findings by any other person or entity is prohibited without written permission of TurnKey Environmental Restoration, LLC.

Please do not hesitate to contact us if you have any questions or wish to discuss this report in greater detail.

Sincerely,  
TurnKey Environmental Restoration, LLC

<b>Semi-Volatile Organic Compounds (SVOCs) - mg/Kg<sup>3</sup></b>				
Acenaphthene	<b>20</b>	3	ND	ND
Anthracene	<b>100</b>	1.4	ND	ND
Fluorene	<b>30</b>	8.5	0.79 J	ND
Naphthalene	<b>12</b>	<b>22</b>	1	ND
Phenanthrene	<b>100</b>	15	1.6	ND
Pyrene	<b>100</b>	0.61 J	ND	ND

**Notes:**

1. Only those parameters detected at a minimum of one sample location are presented in this table; all other compounds were reported as ND.
2. Values per NYSDEC CP-51 Soil Cleanup Levels (SCLs)
3. Sample results were reported by the laboratory in ug/kg and converted to mg/kg for comparisons to SCOS.

**Definitions:**

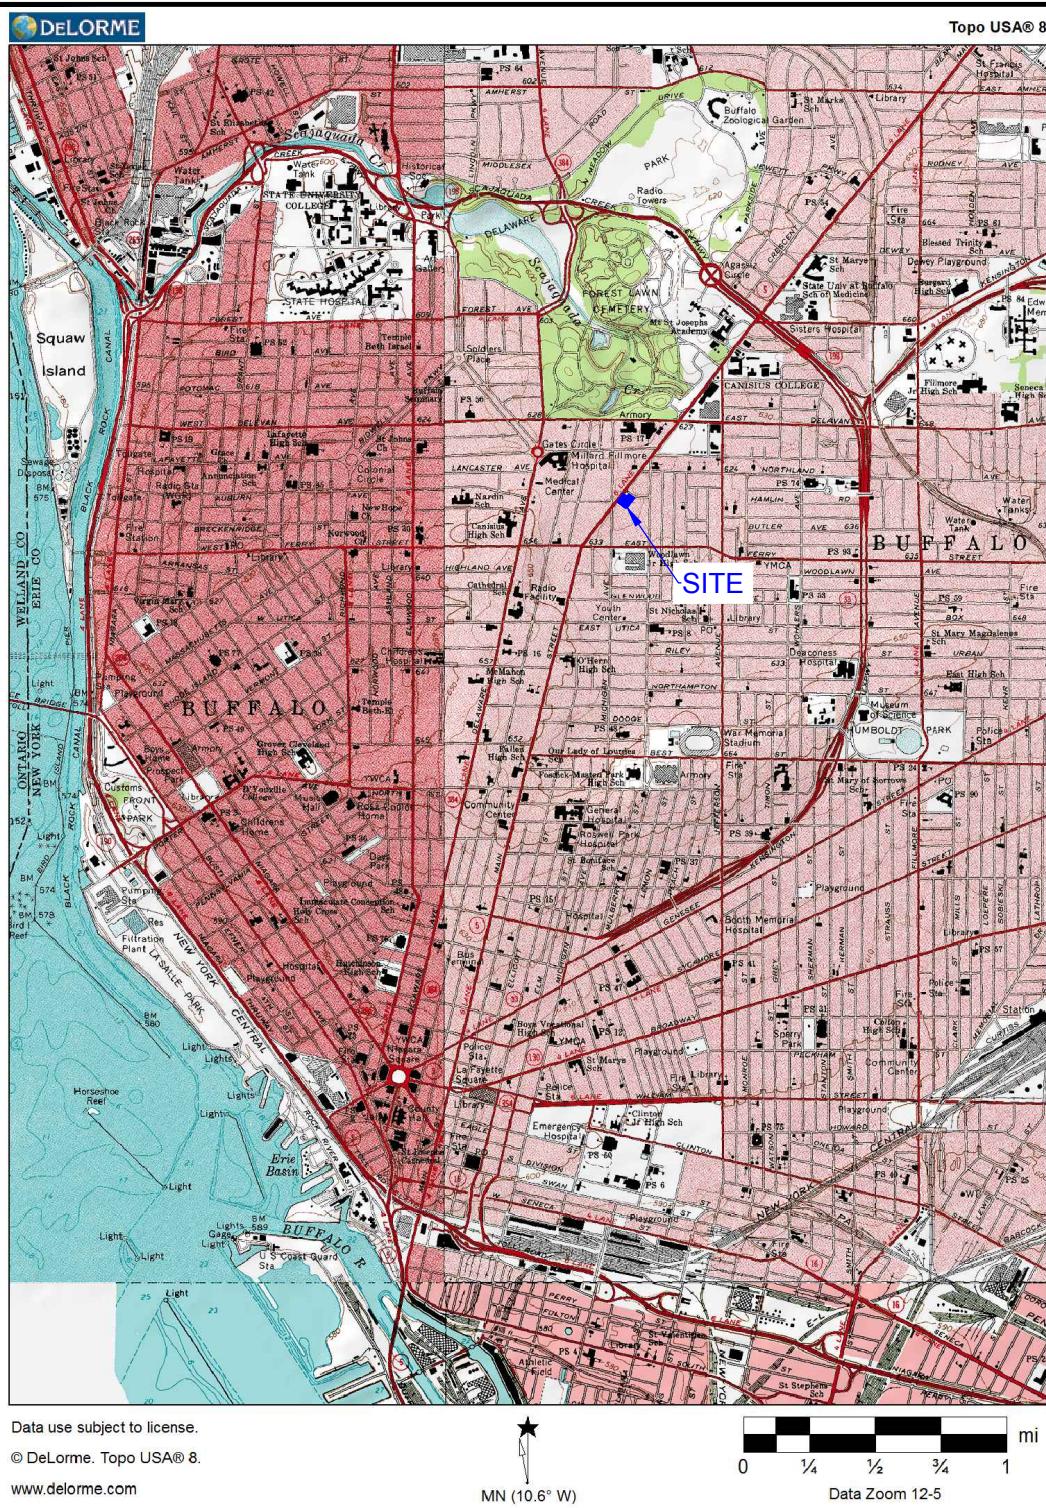

- ND = Parameter not detected above laboratory detection limit.  
"--" = No value available for the parameter; Parameter not analyzed for.  
J = Estimated value; result is less than the sample quantitation limit but greater than zero.  
D = Indicates laboratory dilution.

**Bold** = Result exceeds CP-51 SCLs.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GC/MS Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

## Job ID: 480-77270-1

### Laboratory: TestAmerica Buffalo

#### Narrative

#### Job Narrative 480-77270-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 3/26/2015 12:40 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.9° C.

#### GC/MS VOA

Method(s) 8260C: Reported analyte concentrations in the following samples are below 200ug/kg and may be biased low due to the samples not being collected according to 5035-L/5035A-L low-level specifications: SB-02 (0-2) (480-77270-2).

Method(s) 8260C: The following sample was weighed at a reduced weight to bring the concentration of target analytes within the calibration range: SB-02 (0-2) (480-77270-2). Elevated reporting limits (RLs) are provided.

Method(s) 8260C: Reported analyte concentrations in the following samples are below 200ug/kg and may be biased low due to the samples not being collected according to 5035-L/5035A-L low-level specifications: SB-02 (0-2) (480-77270-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method(s) 8270D: The following samples were diluted due to the nature of the sample matrix: SB-01 (2-4) (480-77270-1), SB-02 (0-2) (480-77270-2) and SB-03 (0-2) (480-77270-3). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: The method blank for batch 232623 contained Bis(2-ethyl hexyl)phthalate below the method reporting limit (RL).

Method(s) 8270D: The continuing calibration verification (CCV) analyzed in batch 480-232980 was outside the method criteria for the following analyte: N-Nitrosodiphenylamine. Any detection for the affected analyte is considered estimated.

Method(s) 8270D: The following sample, SB-01 (2-4) (480-77270-1), contained 2-Methylnaphthalene above the range of the calibration, therefore the results for this analyte should be considered an estimate. The results for this analyte were requested after the completion of the analysis and beyond the analytical and extraction hold time.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: Benchmark Env. Eng. & Science, PLLC

Job Number: 480-77270-1

**Login Number:** 77270

**List Source:** TestAmerica Buffalo

**List Number:** 1

**Creator:** Janish, Carl M

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True
