1.0 INTRODUCTION

Bergmann is submitting this groundwater characterization report for the second quarter 2022 sampling event, conducted on June 16th and 17th, 2022, on behalf of the Dormitory Authority of the State of New York (DASNY) and the New York State Office of People with Developmental Disabilities (OPWDD) for activities conducted at the former Gowanda Day Habilitation Center facility at 4 Industrial Place, Gowanda, NY. The OPWDD, as the volunteer, entered into a Voluntary Cleanup Agreement (VCA) with the New York State Department of Environmental Conservation (NYSDEC) to conduct investigations and implement remedial measures in accordance with VCA Site No. V-00463-9, effective August 16, 2001.

1.1 SCOPE OF WORK

This report documents the site-wide groundwater monitoring and laboratory analytical sampling event conducted on June 16th and June 17th, 2022. Field measurements, sampling procedures and laboratory analysis were conducted in accordance with the October 2006 Operations, Monitoring and Maintenance (OM&M) Manual and as modified with NYSDEC approval. During this sampling event, groundwater from nineteen (19) of twenty-one (21) site-related groundwater monitoring wells and all seven (7) groundwater recovery wells were sampled for laboratory analysis. Monitoring wells MW-4 and MW-17 had hornet nests present, and so were not accessible at the time of the sampling event. Of the eight (8) monitoring wells determined by the NYSDEC and Bergmann personnel in 2008 to be outside the area of impact by the Groundwater Treatment System (GTS), all were sampled. Monitoring well MW-21 was added to the well sampling plan permanently by NYSDEC to monitor groundwater migration off-site.

The prior groundwater sampling event was conducted in March 2022 and included analysis of groundwater samples from all twenty-one (21) of twenty-one (21) site-related groundwater monitoring wells and all seven (7) groundwater recovery wells.

1.2 SITE BACKGROUND

The Gowanda Day Habilitation site consists of a 5.94-acre parcel located at 4 Industrial Place, Gowanda, New York. The building, previously used by several manufacturing operations, was built in stages between circa 1948 and 1987 and was renovated in 1987-1988. New York State agencies occupied the building since 1982. New York State acquired the parcel in 1989. The building was most recently operated by the OPWDD, which at that time was known as the Western New York Developmental Disabilities Services Office, as a Day Habilitation Center for mental care clients. In April 2001, on-site operations ceased. The nature and extent of contamination at the Gowanda Day Habilitation Center was detailed as part of the 2003 Site Investigation and 2004 Supplemental Site Investigation Reports. Trichloroethene (TCE) was the most commonly detected compound. TCE degradation products cis-1,2, Dichloroethene (Cis-1,2-DCE), trans-1,2-Dichloroethene (Trans-1,2-DCE) and Vinyl Chloride (VC) were also detected.

Following Interim Remedial Measure (IRM) system installation, the Groundwater Treatment System (GTS) and the Soil Vapor Extraction System (SVES) were activated on May 10, 2005, recovering 2-5 gallons per minute (gpm) of groundwater. An additional groundwater recovery well, designated G-3, was installed outside the building and adjacent to MW-17 in November 2008. The GTS portion consists of seven (7) groundwater recovery wells (four dual phase recovery wells and three groundwater-only recovery wells), an air compressor, a network of controller-less pneumatic pumps and an air stripper treatment system to process recovered groundwater. Recovered groundwater was pumped to the equalization tank for settling of the sediment and transferred to the air stripper using a consistent flow rate. Air discharge from the air stripper was routed to the

SVE for treatment prior to discharge. Groundwater was discharged to the village of Gowanda Sewage Treatment Plant (STP).

In January 2008, the building was decommissioned. The GTS was winterized with the addition of heat tape and insulation to conveyance lines and the installation of an independently operated suspended heater in the treatment area for the GTS and SVES (former Machine Shop). Quarterly groundwater sampling with Operation and Maintenance of the remediation system has been ongoing since 2002.

In January 2014, the condition of the SVE and GTS was discussed with the NYSDEC representative, and it was agreed that these systems would be inactivated to allow for groundwater level recovery during the preparation of an In-Situ Chemical Oxidation (ISCO) Remedial Action Plan (RAP) for the implementation of an ISCO treatment. Bergmann submitted an ISCO RAP for groundwater treatment to the NYSDEC to address the remaining contamination at the Site in lieu of costly repair of the SVE and GTS. The SVE and GTS equipment will remain on-site in the event that re-activation is required in the future. The ISCO was implemented in May 2015 and a second round of injections in September 2015. An ISCO Report was prepared and submitted under a separate cover.

2.0 GROUNDWATER SAMPLING OVERVIEW AND METHODS

2.1 WELL MAINTENANCE ACTIVITIES

During the June 2022 site visit, all monitoring wells except MW-4 and MW-17 were accessible, and the integrity of the wells was not compromised. Monitoring wells MW-4 and MW-17 had hornet nests present, and so were not accessible at the time of the sampling event. Repairs or maintenance to the network of groundwater monitoring wells or recovery wells has not been required since June 2007, with the exception of the redevelopment activities performed on August 19, 2015, and removal of asphalt from several flush mount wells located on Torrance Place for sampling access. All protective casings and flush-mount curb boxes were found to be intact and secure. Exterior monitoring wells are secured with locking stick-up protective casings. The monitoring wells within the building are secured with flush-mount roadway covers. Well maintenance was not performed during the June 2022 sampling event.

2.2 GROUNDWATER FIELD MONITORING AND SAMPLING ACTIVITIES

Groundwater measurements and sampling activities were conducted in accordance with the October 2006 OM&M Manual. The depths to groundwater in groundwater monitoring wells are measured quarterly to track site-wide changes in the water table elevation and to allow for adjustment at recovery wells. Past operation of the recovery wells was intended to establish hydraulic containment of the impacted groundwater plume beneath the former Day Habilitation building and improve recovery and treatment of impacted groundwater. Groundwater samples were collected from nineteen (19) of the twenty-one (21) site-related groundwater monitoring wells for laboratory analysis on June 16th and June 17th, 2022. Monitoring wells MW-4 and MW-17 had hornet nests present, and so were not accessible at the time of the sampling event. Depth to groundwater measurements were obtained from 26 wells (including recovery wells).

Groundwater samples were collected from monitoring wells after each well was gauged. Sample parameters including turbidity, temperature, pH, oxygen, and conductivity were determined by analyzing a quantity of groundwater in a cup using a YSI Quatro prior to sampling. Groundwater samples were collected from recovery wells using dedicated bailers, to allow for an accurate representation of groundwater without collecting sediment from within the wells. Sampling was performed based on discussion and direction from a telephone conversation with David Szymanski (NYSDEC project manager at the time) in January 2018 in which no noticeable changes in test results were noticed comparing bailing and slow purge methods. This was first noted in Q3 2018 and is also noted in the approved PRR dated 2019. A single duplicate sample and a field blank sample were collected and submitted for laboratory analysis.

Bergmann delivered the groundwater samples to FedEx. The samples were then transported by FedEx via a chain-of-custody protocol to Alpha Analytical's NYSELAP certified laboratory located in Westborough, Massachusetts. The samples were then tested for Volatile Organic Compounds (VOCs), using EPA Method 8260C. Analytical results for each individual monitoring well have been posted in Table 3 for comparative purposes from sampling events completed 2012 – 2022.

3.0 LOCAL GROUNDWATER FLOW CHARACTERIZATION

The Site water table potentiometric surface pattern and groundwater flow direction was determined for June 2022 using elevations measured at each well. Groundwater elevations and well reference elevations were calculated using depth to water values obtained on June16th and June 17th, 2022. The well gauging values and groundwater elevations are provided in Table 1 – Groundwater Elevations and Field Measurements – June 2022.

The June 2022 groundwater table map shows a flow pattern similar to groundwater flow pattern observed historically since 2002. Groundwater at the Site is flowing in a northerly direction. Torrance Place is hydraulically down-gradient from the Day Habilitation Center building. It is noted that the residential properties along Torrance Place utilize municipal/public water. The June 2022 depths to groundwater range from 6.70 feet (ft) below top of outer casing (btoc) at MW-1 and MW-2, to 13.70 ft. btoc at MW-6. The average depth to groundwater at the wells measured was 9.92 ft btoc, which is an increase from the average depth to water of the previous sampling event in March of 2022 (9.11 ft btoc).

The site-wide average depth to water table increased by approximately 0.81 ft when compared to the previous sampling event from March 2022. This increase in the elevation of groundwater appears to be seasonal.

Measured depth to water at all gauged monitoring and recovery wells is presented in Table 1 and June 2022 Groundwater Elevation Contours are presented on Figure 1 – June 2022 Groundwater Elevation Contour Map.

4.0 LABORATORY ANALYSIS

4.1 LABORATORY ANALYSIS ON GROUNDWATER SAMPLES

Laboratory analysis was completed on the groundwater samples from nineteen (19) monitoring wells and seven (7) recovery wells collected June 16th and June 17th, 2022. Samples were analyzed for VOCs via EPA Method 8260C. Analysis was performed in accordance with the October 2006 OM&M Manual. The following chlorinated VOCs (CVOCS) were analyzed for:

- Trichloroethene (TCE)
- 1,1,1 Trichloroethane (TCA)
- Cis-1,2-Dichloroethene (Cis-DCE)
- Trans-1,2-Dichloroethene (Trans-1,2-DCE)
- Vinyl Chloride (VC)

CVOCs values, as present throughout this report, in the text, charts, and Tables 2, 3, and 4, are not representative of CVOCs detected, but are exclusively representative of the sum of TCE, Cis-DCE TRANS-1,2-DCE, VC, and TCA detected.

Additionally, 1,1-Dichloroethene was detected in samples taken from MW-11 and MW-12. This substance is considered a degradation product. Tetrachloroethene was detected in the sample taken from MW-5 and 1,2,4-Trichlorobenzene was detected at the sample taken from MW-3.

4.2 MONITORING WELL GROUNDWATER ANALYSIS SUMMARY

The June 2022 analytical results indicate detection of four (4) chlorinated VOCs in monitoring well samples: TCE, Cis-DCE, VC and Trans-1,2-DCE. Chlorinated VOCs were detected in groundwater samples from fourteen (14) of the nineteen (19) monitoring wells sampled. Analytical results are summarized in Table 2 – June 2022 Analytical Results Summary, which compares detected VOCs and applicable NYSDEC Class GA Standards for each analyte. The complete laboratory analytical report is provided in Appendix A – Laboratory Analytical Results Report June 2022 Sampling Event. Table 3 – Historic Groundwater Analysis Results Summary includes the historical CVOC concentrations at each well since the groundwater monitoring of the wells began in 2002.

VOCs were not detected in groundwater from five (5) of the sampled monitoring wells.

Groundwater samples from nine (9) monitoring wells had detectable chlorinated VOCs at concentrations above applicable Class GA Standards. The monitoring well with the highest CVOCs, MW-1, with a value of 529.40 parts per billion (ppb), is located in the area of historically greatest impacted groundwater.

Concentrations in seven (7) of the nineteen (19) monitoring well groundwater samples increased when compared to the March 2022 sampling event while concentrations in seven (7) of the nineteen (19) monitoring well groundwater samples decreased. Concentrations of CVOCs in five (5) monitoring wells remains unchanged. The current sampling analytical results indicate an average site-wide decrease in CVOCs of approximately 86.83% since the activation of the GTS in May 2005.

The area of highest concentration of CVOCs groundwater is in the area centered between monitoring wells MW-1 and MW-11, which has historically concentrations of CVOCs have been detected and is inferred as the source area of impacted groundwater.

In the source area of the plume (MW-1, MW-6, MW-7, MW-11, MW-12, MW-14, MW-15, and MW-17) the analytical results shows a contaminant reduction in CVOC concentrations by an average of approximately 83.57% monitoring of these wells since 2002.

The CVOC concentrations increased at monitoring well MW-1 relative to the prior sampling event. The CVOC concentration at monitoring well MW-1 for the June 2022 sampling event was 529.40 parts per billion (ppb), an increase from the March 2022 value of 382.59 ppb. Since activation of the GTS, detected VOCs at MW-1 have decreased by 31.07%.

Monitoring well MW-11 decreased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at MW-11 for the June 2022 sampling event is 200.1 ppb, a decrease from the March 2022 value of 420.6 ppb. Since activation of the GTS in May 2005, detected VOCs at MW-11 have decreased by 95.69%.

Monitoring well MW-12 decreased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at MW-12 for the June 2022 sampling event is 168.10 ppb, a decrease from the March 2022 value of 271.90 ppb. MW-12 is nearest to recovery well DR-2, in close proximity to the center of the building. Since activation of the GTS in May 2005, detected VOCs at MW-12 have decreased by 98.67%.

Monitoring well MW-13 decreased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at monitoring well MW-13 for the June 2022 sampling event was 2.06 ppb, a decrease from the March 2022 sampling event, which was 5.11 ppb. Since activation of the GTS, detected VOCs at MW-13 have decreased by 99.35%.

Monitoring well MW-14 decreased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at MW-14 for the June 2022 sampling event is 31.00 ppb, a decrease from the March 2022 value of 104.45 ppb. MW-14 is nearest to recovery well DR-3. Since activation of the GTS in May 2005 detected VOCs at MW-14 have decreased by 90.16%

Monitoring well MW-15 increased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at MW-15 for the June 2022 sampling event was 14.10 ppb, an increase from the March 2022 sampling event, which was 9.4 ppb. MW-15 is nearest to recovery well DR-4. Since activation of the GTS in May 2005, the detected VOCs at MW-15 have decreased by 98.07%.

Six (6) groundwater monitoring wells are located along the subject property's north perimeter, down-gradient from the area of impacted groundwater (.MW-5, MW-6, MW-7, MW-16, MW-17, and MW-21). The current analytical data exhibit an overall decrease in targeted CVOCs at the sampled monitoring wells along the north perimeter, compared to the March 2022 sampling event.

Monitoring wells MW-18, MW-19R and MW-21 are located off-site along Torrance Place. These three (3) wells are considered to be beyond the radius of influence for the Day Habilitation groundwater treatment system. The current analytical results indicate a CVOC concentration of 9.43 ppb for MW-18. Monitoring well MW-21 was added to the sampling list at the request of the NYSDEC beginning with the June 2015 sampling event. It was first noted that during the August 2017 sampling event, wells MW-19R and MW-21 were not sampled because they were inaccessible. It was observed that the wells were likely paved over by a re-sealing the Torrance Place road surface. These wells were uncovered after the July 2019 sampling event, and subsequent sampling events. Well MW-19R had a CVOC concentration of 0.32 ppb, and well MW-21 had a CVOC concentration of 6.35 ppb during the June 2022 sampling event.

Laboratory analytical reports are included in Appendix A. Monitoring well locations and distribution of analytical results are shown on Figure 2 – June 2022 Distribution of Groundwater Analytical Results: Monitoring Wells.

4.3 SENTRY WELL GROUNDWATER ANALYSIS SUMMARY

Sentry groundwater monitoring wells monitor a separate occurrence of contaminated groundwater at the Gowanda Electronics site (NYSDEC Site 905025), immediately east of Industrial Place and east of the Day Habilitation Center property. The eastern sentry wells sampled for this event were MW-19R and MW-20. Sentry well MW-4 was inaccessible at the time of the sampling event due to the presence of a hornet nest. The current results indicate 0.32 ppb for MW-19R and non-detect for MW-20.

The Gowanda Electronics impacted groundwater plume may be migrating to an area near Industrial Place and has intermittently impacted MW-19R. The Gowanda Electronics impacted groundwater plume does not appear to extend to the Day Habilitation Center property, based on consistent non-detect values at the eastern sentry wells. Conversely, impacted groundwater from the Day Habilitation Center does not appear to extend off-site to the east toward Industrial Place. A ISCO injection application was implemented for the Gowanda Electronics site in March 2014.

Laboratory analytical results are included in Appendix A. Sentry well locations and analytical results are shown on Figure 2.

4.4 RECOVERY WELL GROUNDWATER ANALYSIS SUMMARY

During the June 2022 sampling event, all of the seven (7) recovery wells were sampled.

The June 2022 analytical results indicate detection of chlorinated VOCs in all seven (7) recovery well samples that include: TCE, Cis-DCE, VC and Trans-1,2-DCE. CVOCs detected in the seven (7) recovery wells for which past data is available have decreased overall since activation of the GTS in May 2002. The average decrease in CVOCs for the current sampling event is 88.34% relative to concentrations prior to GTS activation in 2002. Relative percent increase in CVOCs for all monitoring wells and recovery wells are shown on Table 4 – Percent Reductions in Total Groundwater CVOCs.

Recovery well DR-1 decreased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at DR-1 for the June 2022 sampling event is 341.00 ppb, a decrease from the March 2022 value of 663.50 ppb. The current sampling event indicates a decrease in CVOCs at DR-1 of 95.74% since activation of the GTS. Recovery well DR-1 is located closest to MW-1 in an area of historically highest concentrations.

Recovery well DR-2 decreased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at DR-2 for the June 2022 sampling event is 100.15 ppb, a decrease from the March 2022 value of 129.15 ppb. The current sampling event indicates a decrease in CVOCs at DR-2 of 95.00% since activation of the GTS.

Recovery well DR-3 increased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at DR-3 for the June 2022 sampling event is 85.71 ppb, an increase from the March 2022 value of 75.20 ppb. The current sampling event indicates a decrease in CVOCs at DR-3 of 94.16% since activation of the GTS.

Recovery well DR-4 decreased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at DR-4 for the June 2022 sampling event is 24.4 ppb, a decrease from the March 2022 value of 29.0 ppb. The current sampling event indicates a decrease in CVOCs at DR-4 of 98.62% since activation of the GTS.

Recovery well G-1 decreased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at G-1 for the June 2022 sampling event was 41.98 ppb, a decrease from the March 2022 value of 47.21 ppb. The current sampling event indicates a decrease in CVOCs at G-1 of 92.29% since activation of the GTS.

Recovery well G-2 increased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at G-2 for the June 2022 sampling event was 67.69 ppb, an increase from the March 2022 value of 45.35 ppb. The current sampling event indicates a decrease in CVOCs at G-2 of 82.42% since activation of the GTS.

Recovery well G-3 increased in targeted chlorinated VOCs relative to the prior sampling event. The CVOC concentration at G-3 for the June 2022 sampling event was 160.51 ppb, an increase from the March 2022 value

of 153.75 ppb. The current sampling event indicates a decrease in CVOCs at G-3 of 60.17% since activation of the GTS.

Laboratory analytical results are included in Appendix A. Recovery well locations and analytical results are shown on Figure 3 – June 2022 Distribution of Groundwater Analytical Results: Recovery Wells.

4.5 QUALITY ASSURANCE AND QUALITY CONTROL SAMPLES

An equipment blank was collected. The analytical results for this equipment blank were non-detect for all parameters including acetone. A trip blank was supplied by the laboratory for the June 2022 sampling event and was analyzed, and was non-detect for CVOCs. A field duplicate (labeled as MW-X) was taken from MW-5. The results of this field duplicate were generally consistent with the results of the sample labeled MW-5.

The laboratory report noted that the samples were received in a cooler with ice, but the ice was melted, and the samples were received above the required temperature range. The melting of the coolers ice is potentially a result of the method of transport to the analytical laboratory, which was performed by FedEx. To remedy the potential for temperature range issues in future sampling events, the laboratory's dedicated courier will be utilized.

Headspace was noted in the sample containers submitted for MW-15. This headspace was potentially a result of sampling collector error. To remedy the potential for headspace in future sampling containers in future sampling events, sampling collector will properly verify that the containers do not have headspace immediately after the collection of samples.

Laboratory analytical results are included in Appendix A.

5.0 REMEDIATION SYSTEM EFFICIENCY

5.1 IMPACT OF THE GTS RECOVERY WELLS

Groundwater analytical charts for the seven (7) sampled recovery wells and the nearest relative monitoring well were created to illustrate the impact of the GTS on recovery wells at the Day Habilitation Center.

Chart 1 compares the sample results from the sampled groundwater recovery wells (DR-1, DR-2, DR-3, DR-4, G-1, G-2, G-3). Since activation of the GTS in May 2005, all seven (7) sampled groundwater recovery wells have demonstrated a general decrease in CVOC concentration.

Chart 2 displays the relationship between monitoring wells MW-1, MW-11, and recovery well DR-1. The current CVOCs at MW-1 (529.40 ppb) show an increase from the March 2022 sampling event (382.59 ppb). The current CVOCs at MW-11 (200.1 ppb) shows a decrease from the March 2022 sampling event (420.6 ppb). The current CVOCs at DR-1 (341.00 ppb) show a decrease from the March 2022 sampling event (663.50 ppb).

Chart 3 compares analytical results between recovery well DR-2 and MW-12. These wells are located north of the wells outlined in Chart 1 and represent the northern limit of the highest concentration within the impacted area. The current CVOCs at MW-12 (168.10 ppb) show a decrease from the March 2022 sampling event (271.90 ppb). The current CVOCs at recovery well DR-2 (100.15 ppb) show a decrease from the March 2022 sampling event (129.15 ppb).

Chart 4 compares the relationship between wells DR-3 and MW-14 which are located in the central portion of the Gowanda Day Habilitation building. The current CVOCs at MW-14 (31.00 ppb) show a decrease from the March 2022 sampling event (104.45 ppb). The current CVOCs at recovery well DR-3 (85.71 ppb) show an increase from the March 2022 sampling event (75.20 ppb).

Chart 5 compares analytical results between recovery well DR-4 and MW-15. These wells are located at the center-north portion of the building. The current CVOCs at MW-15 (14.10 ppb) show an increase from the March 2022 sampling event (9.4 ppb). The current CVOCs at recovery well DR-4 (24.4 ppb) show a decrease from the March 2022 sampling event (29.0 ppb).

Chart 6 compares analytical results between recovery well G-1 and monitoring well MW-17. The recovery well is located in the northern portion of the building and MW-17 is located along the northern property line. MW-17 was not sampled at the time of the sampling event due to the presence of a hornet nest. The March 2022 sampling event CVOCs at recovery well MW-17 (85.32 ppb) showed an increase from the November 2021 sampling event (85.27 ppb). The current CVOCs at recovery well G-1 (41.98 ppb) show a decrease from the March 2022 sampling event (47.21 ppb).

Chart 7 compares analytical results between recovery well G-2 and MW-7 which are located in the northeastern portion of the building. This area is at the apparent western perimeter of the plume . Recovery well G-2 had a CVOC concentration of 67.69 ppb, which shows an increase from the March 2022 sampling event (45.35 ppb). The June 2022 CVOCs of MW-7 (30.26 ppb) show a decrease from the March 2022 sampling event (33.06 ppb).

Chart 8 compares analytical results between recovery well G-3 which is located at the northeastern portion of the building and MW-17 which is located along the northern property boundary of the plume. This area is at the western perimeter of the plume. MW-17 was not sampled at the time of the sampling event due to the presence of a hornet nest. The March 2022 CVOCs at monitoring well MW-17 (85.32 ppb) showed an increase from the November 2021 sampling event (85.27 ppb). The current CVOCs at recovery well G-3 (160.51 ppb) show an increase from the March 2022 sampling event (153.75 ppb).

5.2 EXTENT OF IMPACTED GROUNDWATER

The area of highest impacted groundwater is consistent with prior sampling events. The bulk of the contaminant mass appears to be concentrated beneath the building in the source area, in the vicinity of monitoring well MW-1 and MW-11, extending north to recovery well DR-2. Concentration of VOCs in the source area have been reduced as a result of historic cleanup activities.

When operating, the GTS maintained an area of hydraulic containment for recovery wells within the source area of the plume. The GTS was successful in hydraulically containing most of the contaminant plume on the property and minimizing further migration. The GTS was not operating during this monitoring period and overall sample results are similar to previous quarterly sampling results. Therefore, residual CVOCs in the plume have not migrated and appear to be stabilized when compared to sample results with the operation of the GTS during previous monitoring events.

VOCs were not sampled at MW-19R and MW-21 during the July 2019 and March 2018 sampling events due to being paved over and inaccessible, as first reported by Bergmann in the August 2017 Sampling Report. These two (2) monitoring wells have since been uncovered and began to be sampled again starting with the August 2019 sampling event. VOCs were not sampled at MW-4 and MW-17 during the June 2022 sampling even due to the presence of hornet nests in these wells. The analytical results are summarized in Table 5.

The redevelopment of wells was performed in the fall of 2015 to remove sediment from wells at the Site after the ISCO injections. Overall reduction of contaminants in the majority of the monitoring and recovery wells has occurred due to completed remediation at the Site when compared to pre-remediation levels during the past fifteen (15) years of sampling.

5.3 FUTURE GROUNDWATER MONITORING AND ANALYSIS ACTIVITIES

The condition of the SVE and GTS was discussed with the NYSDEC representative, and it was agreed upon that these remediation systems would be inactivated to allow for groundwater level recovery during the implementation of an ISCO groundwater treatment and subsequent sampling events. Bergmann performed an ISCO injection application in May (round 1) and September (round 2) 2015 to address the remaining residual contamination at the Site in lieu of costly repair of the SVE and GTS. The SVE and GTS equipment remains on site in the event that re-activation is required in the future. However, system components may need repair and/or replacement prior to re-activation.

The next site-wide groundwater sampling and laboratory analysis event is scheduled for Q3 2022. All monitoring wells are expected to be sampled, and those two (2) occupied by hornet nests at the time of the Q2 2022 sampling event will be inspected on the first day on-site, and appropriate measures will be taken to allow for sampling during the Q3 sampling event. Future groundwater sampling events will be conducted to track the effects of the ISCO injections on impacted groundwater and to evaluate seasonal changes in water table elevations. In addition, the evaluation of groundwater flow direction and movement of plume at the site will be monitored and recorded during future sampling events.

NOTES

btoc = Below top of casing (inner riser) All measurements are in feet, referenced to Mean Sea Level
NS = Not Sampled
ND = No floating product encountered
Minimum purge volume = 3 X well volume, 0.163 gallon per foot in a 2" diameter well. 0.653 gallon per foot in a 4" diameter well.
Monitoring well MW-19 was removed and the area restored on July 23, 2003 immediately after the well was developed, purged of 3 volumes and sampled.
The borehole for MW-19 was backfilled with a cement-bentonite grout after the PVC screening and casing was successfully removed.
Wells MW-19R, MW-20 and MW-21 were installed in October 2004.

Table 2 June 2022 Analytical Results Summary
Gowanda Day Habilitation Center
4 Industrial Place, Gowanda, New York
VCA # V-00463-9

Monitoring Well MW-1 Sample Date 6/16/2022
Sampling Events

Analyte in ppb	Mar 2022	Jun 2022	NYS Guidance Value
TCE	**320.00**	**400.00**	5.0
CIS	**58.00**	**120.00**	5.0
TRANS	**4.20**	**5.30**	5.0
VC	0.39	4.10	2.0
TCA	ND	ND	5.0
Total VOCs	**382.59**	**529.40**	

Monitoring Well MW-2 Sample Date: 6/16/2022
Sampling Events

Analyte in ppb	Mar 2022	Jun 2022	NYS Guidance Value
TCE	ND	ND	5.0
CIS	ND	ND	5.0
TRANS	ND	ND	5.0
VC	ND	ND	2.0
TCA	ND	ND	5.0
Total VOCs	ND	ND	

Monitoring Well MW-3 Sample Date: 6/17/2022
Sampling Events

Analyte in ppb	Mar 2022	Jun 2022	NYS Guidance Value
TCE	0.25	0.29	5.0
CIS	ND	0.75	5.0
TRANS	ND	ND	5.0
VC	ND	ND	2.0
TCA	ND	ND	5.0
Total VOCs	0.25	1.04	

Monitoring Well MW-4 Sample Date: N/A
Sampling Events

Analyte in ppb	Mar 2022	Jun 2022	NYS Guidance Value
TCE	ND	NS	5.0
CIS	ND	NS	5.0
TRANS	ND	NS	5.0
VC	ND	NS	2.0
TCA	ND	NS	5.0
Total VOCs	ND	NS	

Monitoring Well MW-5 Sample Date: 6/17/2022
Sampling Events

Analyte in ppb	Mar 2022	Jun 2022	NYS Guidance Value
TCE	0.60	1.00	5.0
CIS	ND	ND	5.0
TRANS	ND	ND	5.0
VC	ND	ND	2.0
TCA	ND	ND	5.0
Total VOCs	0.60	1.00	

Monitoring Well MW-6 Sample Date: 6/17/2022
Sampling Events

Analyte in ppb	Mar 2022	Jun 2022	NYS Guidance Value
TCE	0.21	ND	5.0
CIS	**47.00**	**42.00**	5.0
TRANS	ND	ND	5.0
VC	**45.00**	**47.00**	2.0
TCA	ND	ND	5.0
Total VOCs	**92.21**	**89.00**	

ND = Non-detect
Total VOCs values are not the total VOCs detected, but the sum of TCE, CIS, TRANS, VC, and TCA detected.
NS = Not Sampled. No analysis performed during this sampling event.
Results expressed as parts per billion (ppb).
Bold results exceed NYSDEC TOGS 1.1.1 Class GA, June 1998 re-issue (MTBE = April 2000 Addendum Guidance Value)

NS= This well not included in this sampling event.
ND = Not Detected, results less than Method Detection Limit.
Impacted north property line wells: MW-5, MW-6, MW-7, MW-16, MW-17, MW-21
All compounds are measured in parts per billion (ppb).
VOC - Volatile Organic Compounds.
DUP - Duplicate Sample
EB - Equipment/Field Blank Sample
* - Sample was broken in transit and not able to be analyzed
DWS- Different Well Sampled than previosuly tested.

Total VOCs values are not the total VOCs detected, but the sum of TCE, CIS, TRANS, VC, and TCA detected.

Table 4 Percent Reductions in Total Groundwater VOCs
Gowanda Day Habilitation Center
4 Industrial Place, Gowanda, New York
VCA # V-00463-9

The Groundwater Treatment System was activated in May 2005

Plume Area = MW-1, MW-11, MW-12, MW-14, MW-15, MW-7, MW-17, MW-6

Total VOCs values are not the total VOCs detected, but the sum of TCE, CIS, TRANS, VC, and TCA detected.

% reduction = percent reduction in total Volatile Organic Compounds (VOCs) since groundwater monitoring was initiated

†Negative values indicate an increase in total VOCs since monitoring commenced in 2002. The percent increase in total groundwater VOCs is shown below for MW-1.

APPENDIX A:

Laboratory Analytical Results Report - June 2022 Sampling Event

ANALYTICAL REPORT

Lab Number:	L2232615
Client:	Bergmann Associates 280 E Broad Street Rochester, NY 14604
ATTN:	Ariadna Cheremeteff
Phone:	(585) 498-7950
Project Name:	Q2 GOWANDA 2022
Project Number:	Not Specified
Report Date:	07/05/22

The original project report/data package is held by Alpha Analytical. This report/data package is paginated and should be reproduced only in its entirety. Alpha Analytical holds no responsibility for results and/or data that are not consistent with the original.

Certifications & Approvals: MA (M-MA086), NH NELAP (2064), CT (PH-0574), IL (200077), ME (MA00086), MD (348), NJ (MA935), NY (11148), NC (25700/666), PA (68-03671), RI (LAO00065), TX (T104704476), VT (VT-0935), VA (460195), USDA (Permit #P330-17-00196).

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number: Not Specified **Report Date:** 07/05/22

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The samples were received via Express Ship in a cooler with ice; however, the ice was melted and the samples were above the required temperature range. Per client authorization of the exceedance, all requested analyses were performed.

In reference to question 1a / A:

L2232615-13: Headspace was noted in the sample containers submitted for TCL Volatiles - EPA 8260C. The analysis was performed at the client's request.

Volatile Organics

L2232615-13: The sample was received in the proper acid-preserved containers; however, upon analysis, the pH was determined to be greater than 2, and thus the method required holding time was exceeded.

L2232615-13: Headspace was noted in the sample container utilized for analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Steven Gniadek

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	Q2 GOWANDA 2022	**Lab Number:**	L2232615
Project Number:	Not Specified	**Report Date:**	07/05/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name:	Q2 GOWANDA 2022	**Lab Number:**	L2232615
Project Number:	Not Specified	**Report Date:**	07/05/22

Data Qualifiers

Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

GROUNDWATER SAMPLING WORKSHEET

BERGMANN
ARCHITECTS ENGINEERS PLANNERS

PROJECT NAME: Gowanda Q2 2022
Project Number: 14263.07
Site Location: Gowanda, New York
Sample Date: 6/16/2022
Weather: 79 Degrees F
Personnel: Justin L. O'Brien

GROUNDWATER SAMPLE POINT

Well Number: MW-1
Location:
Casing Diameter: 2"

Well Dia.	Volume/Foot
1" =	0.041 gal/foot
2" =	0.163 gal/foot
4" =	0.653 gal/foot
6" =	1.469 gal/foot
8" =	2.611 gal/foot

Depth to water, below top of casing: 6.7
Depth to bottom of the well: 16.02
Length of water column in well: 9.32

Volume of water in well casing, gallons: 1.5192
3 Well volumes (= length water column X gal/foot X 3): 4.56
Actual volume purged prior to sampling: 4.75
Sampling Methodology: Hand bailing
Sampling Equipment: Bailer

Well Recharged? N/A
Required Analysis:

FIELD PARAMETER MEASUREMENTS

	Accumulated Volume Purged in Gallons									
Parameter:										
Turbidity	1101.5	NTU								
Temperature	18.2	°C								
pH	6.9									
Conductivity	0.618	SPC ms/cm								
Oxygen	52	DO mg/L								
Salinity										

Time sample was collected: 15:10

8" =	2.611 gal/foot

Depth to water, below top of casing: 10.05
Depth to bottom of the well: 14.75
Length of water column in well: 4.7

Volume of water in well casing, gallons: 0.7661
3 Well volumes (= length water column X gal/foot X 3): 2.2983
Actual volume purged prior to sampling: 2.5
Sampling Methodology: Hand bailing
Sampling Equipment: Bailer

Well Recharged? N/A
Required Analysis:

FIELD PARAMETER MEASUREMENTS

	Accumulated Volume Purged in Gallons									
Parameter:										
Turbidity	46.95	NTU								
Temperature	15.5	°C								
pH	7.14									
Conductivity	0.858	SPC ms/cm								
Oxygen	46.8	DO mg/L								
Salinity										

Time sample was collected: 6:40

Project Number: 14263.07
Site Location: Gowanda, New York
Sample Date: 6/17/2021
Weather: 72 Degrees F
Personnel: Justin L. O'Brien

GROUNDWATER SAMPLE POINT

Well Number: MW-21
Location:
Casing Diameter: 2"

Well Dia.	Volume/Foot
1" =	0.041 gal/foot
2" =	0.163 gal/foot
4" =	0.653 gal/foot
6" =	1.469 gal/foot
8" =	2.611 gal/foot

Depth to water, below top of casing: 10.02
Depth to bottom of the well: 15.82
Length of water column in well: 5.8

Volume of water in well casing, gallons: 0.9454
3 Well volumes (= length water column X gal/foot X 3): 2.84
Actual volume purged prior to sampling: 3
Sampling Methodology: Hand bailing
Sampling Equipment: Bailer

Well Recharged? N/A
Required Analysis:

FIELD PARAMETER MEASUREMENTS

			Accumulated Volume Purged in Gallons							
Parameter:										
Turbidity	1827.8	NTU								
Temperature	14.3	°C								
pH	7.78									
Conductivity	8.25	SPC ms/cm								
Oxygen	81.5	DO mg/L								
Salinity										

Time sample was collected: 8:18
