Re: Former Brainerd Manufacturing Site (# V00519)
Planned Supplemental Groundwater Investigation

Dear Mr. Bonarski:

As discussed during our meeting on June 12, 2008, Benchmark plans to install an additional monitoring well in support of offsite groundwater investigation activities at the former Brainerd Manufacturing Site. The new well, designated MW-13, will be installed on the south side of Linden Avenue within the Monroe County Department of Transportation right-of-way (ROW) at the approximate location shown on Figure 1, attached. As requested by Monroe County, the new well will be constructed with a flush mount casing in the existing sidewalk area.

Well construction will be per Section 2.2 of the October 2005 SI/RAS Work Plan. Specifically, the well will be constructed of 2-inch diameter, flush-joint Schedule 40 PVC with a 10-foot, 0.010-inch machine slotted well screen, lockable J-plug, and 8-inch diameter steel flush mounted road box. The anticipated boring depth is approximately 35 feet below grade. All soil cuttings and development/purge water will be containerized and transported to the Brainerd Site for characterization and appropriate disposal.

Following installation and development, the well will be sampled via low flow sampling techniques, and collected groundwater will be analyzed for Target Compound List (TCL) VOCs per USEPA Method 8260. Data will be furnished with an equivalent Category B deliverables package to allow evaluation by a third party data validation expert. Analyzed data will be submitted to the NYSDEC upon receipt and review by Benchmark.

Please contact us if you have any questions.

Mr. Gary Bonarski
NYSDEC
