Remedy Proposed for State Superfund Site
Public Comment Period Announced

To limit the community spread of COVID-19, Governor Cuomo issued Executive Order 202.15 suspending in-person public meetings relating to proposed site remedies. The NYSDEC remains committed to providing the public with ample opportunity to provide input on proposed remedies in your community. You are encouraged to provide comments in writing to the NYSDEC Project Manager, during the 30-day public comment period:

April 29 through May 29, 2020

The public is invited to comment on a remedy being proposed by the New York State Department of Environmental Conservation (NYSDEC) in consultation with the New York State Department of Health (NYSDOH) to address contamination related to the Mid-Town Laundry site (“site”) located at 1122-1124 State Street, Schenectady County. Please see the map for the site location. The estimated cost to implement the remedy is $1,358,000.

How to Comment: NYSDEC is accepting written comments about the proposed plan, called a Proposed Remedial Action Plan (PRAP) for 30 days, from April 29 through May 29, 2020.

- Access the PRAP and other project documents online through the DECinfo Locator: https://www.dec.ny.gov/data/DecDocs/447048/.
- Documents also are available at the location(s) identified at left under “Where to Find Information.”
- Please submit comments to the NYSDEC project manager listed under Project-Related Questions in the “Who to Contact” area at left.

The site is listed as a Class "2" site in the State Registry of Inactive Hazardous Waste Disposal Sites (list of State Superfund sites). A Class 2 site represents a significant threat to public health or the environment; action is required. NYSDEC is proposing the following remedy to address these threats:

Proposed Remedial Action Plan: The remedy proposed for the site includes:
- Installation and operation of a Soil Vapor Extraction and Air Sparging system (SVE/AS) to remove contaminants of concern in subsurface soil, groundwater, and soil vapor;
- Continued soil vapor intrusion (SVI) investigation, monitoring, and mitigation in the Remedial Investigation study area;
• Sealing the foundation walls/slab of the on-site building to ensure effectiveness of the remedial system and to prevent exposures to occupants;
• Collecting and analyzing soil vapor and post-remedial groundwater samples to evaluate the effectiveness of the remedy;
• Implementing a Site Management Plan (SMP) for long-term maintenance of the remedial systems; and
• Recording of an Environmental Easement to restrict use of the property, prohibit groundwater use, and enforce the SMP with long-term monitoring.

NYSDEC developed the proposed remedy after reviewing the detailed investigation of the site and evaluating the remedial options in the “Feasibility Study”.

Next Steps: NYSDEC will consider public comments as it finalizes the remedy for the site. The selected remedy will be described in a document called a "Record of Decision" that will explain why the remedy was selected and respond to public comments. A detailed design of the selected remedy will then be prepared, and the cleanup will be performed.

NYSDEC will keep the public informed throughout the investigation and cleanup of the site.

Site Description: The Mid-Town Laundry site is located at 1122-1124 State Street in Schenectady and is 0.227 acres in size. The site is situated in an urban area with both residential and commercial properties nearby. The site is relatively flat and includes two abutting and occupied commercial buildings. The remainder of the site is paved, with parking in front and back. The site is currently being used as a restaurant and laundromat.

The site operated as a dry-cleaning facility from approximately 1969 to 1987 and utilized a solvent called tetrachloroethene or PCE. The site was previously investigated as part of the Brandywine Plume track down study which identified groundwater contaminant plumes associated with the Mid-Town Laundry site, and the neighboring Former Marlou Formal Wear site (NYSDEC Site No. 447040). In October 2012, the site was placed on the Registry of Inactive Hazardous Waste Disposal Sites due to the elevated concentrations of PCE in site soil, groundwater and soil vapor.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, 447048) at:

Summary of the Investigation: The primary contaminants of concern at the site are chlorinated volatile organic compounds (cVOCs) which are present site-wide in soil, groundwater and soil vapor. The potential source area is beneath the northwest corner of the on-site building.

State Superfund Program: New York's State Superfund Program (SSF) identifies and characterizes suspected inactive hazardous waste disposal sites. Sites that pose a significant threat to public health and/or the environment go through a process of investigation, evaluation, cleanup and monitoring.

NYSDEC attempts to identify parties responsible for site contamination and require cleanup before committing State funds.
