

DECinfo Locator

Your Source for Documents and Information

Department of
Environmental
Conservation

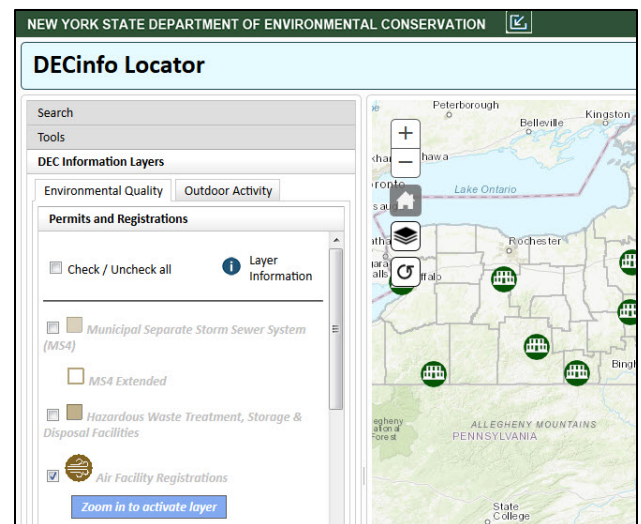

DECinfo Locator is an interactive map that lets you access DEC documents and public data about the environmental quality of specific sites in New York State, as well as outdoor recreation information.

Many Layers Available

With more than 65 interactive data layers, DECinfo Locator lets users select what types of information they would like to see for a given location.

Multiple information layers can be activated at the same time, allowing users to see the many ways DEC is working to protect and enhance the state's environment and recreational opportunities.

We have a short feedback survey for your comments and encourage you to suggest new data layers you would like to see added.
