A <u>record</u> including time achieving 50° F must be kept (this is a HACCP record)</b></p> <p><b><u>ADDITIONAL REQUIREMENTS FOR ALL DEALERS</u></b></p> <p><b>Shipping document</b> – must be included with all shipments of shellstock and include:</p> <ul style="list-style-type: none"> <li>• Date and time of shipment and temperature of shellstock including initials</li> </ul>

**2021 QUICK REFERENCE GUIDE FOR ALL HARVESTERS AND SHELLFISH DEALERS**

**\*FOR MORE DETAILS SEE YOUR 2021 PERMIT CONDITIONS INCLUDED WITH YOUR 2021 PERMIT  
2021 QUICK REFERENCE GUIDE FOR ALL HARVESTERS AND SHELLFISH DEALERS**

**\*FOR MORE DETAILS SEE YOUR 2021 PERMIT CONDITIONS INCLUDED WITH YOUR 2021 PERMIT**

**\*ALL SHELLFISH DEALERS – PLEASE NOTE**

**ALL SHELLSTOCK RECEIVED FROM ALL OTHER DEALERS** must also include a **shipping document** with the shipment of shellstock that includes the following information:

- Date & time shipped **and temperature of shellstock including initials**
- Shellstock shipped prior to reaching 50° F & an indication of the presence of a TTR device

Upon receipt of such shellfish you must record the following:

- Date & time received **and**
- Temperature of the shellstock

**ALL SHELLSTOCK RECEIVED WITHOUT THE PROPER SHIPPING DOCUMENT MUST BE REJECTED**

**DEFINITIONS**

**Adequately Iced** means that the amount and application of the ice is sufficient to ensure that immediate cooling begins and continues for all shellfish. To accomplish this oysters and clams shall be placed in appropriate containers that allow drainage of standing water, and

- Adequate icing requires that bags or shellfish are completely surrounded by ice. If shellfish are in bags, the bags shall be mesh or other breathable material.
- If ice slurry is used and the shellfish are submerged, then the presence of ice in the slurry indicates adequate icing when the temperature of the ice slurry is less than or equal to 45°F (7.2°C). Only water from approved (certified) waters where shellfish were taken (harvested) may be used to constitute the slurry.
- All ice used to cool shellfish must originate from approved sources of potable water, as established under the NSSP.

**Shaded** means that measures are taken to prevent oysters and hard clams from direct exposure to sunlight that might cause a significant increase in post-harvest growth of Vibrio bacteria due to an increase in temperature.

**Internal Temperature** means the external temperature of the shell of the animal, at the center of a packaged mass of shellstock (box, sack, bag, etc.).

**Time of Harvest (Start of Harvest)** means the time when the first shellstock in a lot is taken from the water or, in the case of intertidal harvest, the time of first exposure; a.m. or p.m. must be noted. A new time of harvest begins when a previous container has been filled with the quantity intended.

**Lot of Shellstock** means a single type of bulk shellstock or containers of shellstock of no more than one day's harvest from a single defined growing area gathered by one or more harvesters. A lot may also be used by a harvester to segregate the harvest times and intended uses of shellstock for the purposes of complying with time to temperature requirements.

**Trip Records** means a form of written documentation that includes the harvest area, harvester permit number and the date and time of each lot of shellfish harvested. The digger's tag satisfies these requirements provided that all information as required is included on the tag.
