Categorization of New York State Trout Stream Reaches

NOVEMBER 2020

Andrew M. Cuomo, Governor | Basil Seggos, Commissioner

A. Purpose

This document supports the New York State Trout Stream Management Plan (TSMP) (NYSDEC 2020) by providing DEC Fisheries staff and anglers with a current list of the management categories assigned to New York trout stream reaches.

B. Revision/Update Schedule

Revision 0 dated November 24, 2020.

Management categories assignments may change as new information (biological, use and access) becomes available. This document will be updated annually in mid-February starting in 2021.

C. About Management Categories

The TSMP established five independent categories of trout stream management. The categories make a sharp distinction between wild trout management (three categories) and stocked trout management (two categories). See the TSMP (NYSDEC 2020) for a discussion of each category and the objectives and strategies associated with those categories.

D. Management Category Criteria

The criteria for assigning management categories to stream reaches are listed in Table 1 for wild trout management categories and Table 2 for stocked trout management categories (NYSDEC 2020).

Table 1. Criteria for Wild Trout Management Categories			
	Wild	Wild-Quality	Wild-Premier
Access	Public access	Public access	Significant access – at least 3 cumulative miles of reach length in one or more of the following: <ul style="list-style-type: none"> • Public fishing rights • Public land • Public fishing permitted by landowner • Adequate angler parking
Size	Not applicable	Mean width >10 feet	Mean width >20 feet
Stream Reach Quality (Trout Carrying Capacity)	Meets C(T) ¹ or higher water quality standard or data exists to support C(T) classification	<ul style="list-style-type: none"> • wild trout biomass >40 lbs/acre or • ≥ 300 yearling or older trout/mile 	<ul style="list-style-type: none"> • wild trout biomass >60 lbs/acre or ≥ 500 yearling or older trout/mile • abundance of wild trout ≥9 in • potential to catch memorable fish (12" ST, 15" RT or BT)²
Angler Use	Not applicable	Not applicable	Reach can physically and biologically accommodate moderate to high angler use (>150 hr/acre)

Table 2. Criteria for Stocked Trout Management Categories		
	Stocked	Stocked-Extended
Access	Access by one or more of the following: <ul style="list-style-type: none"> • Public fishing rights easements • Public land • Public fishing permitted by landowner 	Significant access – at least 3 cumulative miles of reach length in one or more of the following: <ul style="list-style-type: none"> • Public fishing rights • Public land • Public fishing permitted by landowner • Adequate angler parking
Size	Mean width >10 feet	Mean width >20 feet
Stream Reach Quality (Trout Carrying Capacity)	<ul style="list-style-type: none"> • Survival to end of May • Does not already support adequate fisheries for black bass or walleye, even though technically a trout stream • Must meet Bp³ standard 	<ul style="list-style-type: none"> • Reach conditions offer potential for spring-stocked trout to survive into summer • Temperatures generally suitable for regular stocking through mid-June or for two consecutive months • Must meet Bs⁴ standard
Angler Use	>75 hours/acre	>150 hours/acre

¹ The C(T) classification applies to waters that support trout and requires evidence of trout presence.

² ST=brook trout, RT= rainbow trout, and BT=brown trout

³ Marginal put and take trout streams with relatively little potential for wild or holdover contribution (Engstrom-Heg 1990).

⁴ Trout streams capable of supporting a spring fishery and some holdover trout, but with habitat deficiencies limiting wild trout (Engstrom-Heg 1990).

E. Management Categories Assigned to Trout Stream Reaches

What is in Table 3

Table 3 contains trout stream reaches that have at least a portion that is publicly accessible and have been assigned one of the following categories: Stocked, Stocked-Extended, Wild-Quality and Wild-Premier. Reaches categorized as Wild with a catch-and-release regulation are also included. Each reach can have a mix of public access, informal access and private land. Anglers should respect private property and any posting of private property.

Wild and Un-categorized trout stream reaches

Many trout streams are categorized either as Wild (publicly accessible) or un-categorized (trout streams not in Table 3 that are on private land). Wild trout stream reaches are not listed in Table 3 due to the number of Wild streams, many of which are unnamed headwater streams. If a trout stream reach is not listed, it is likely categorized as Wild or un-categorized. The stream reach may also be listed in Section F: Table of Management Category Changes as the management category may have changed based on new information.

DEC Regions

Table 3 is organized by NYSDEC Region. The counties contained within DEC Regions is as follows:

Region 1: Nassau and Suffolk counties

Region 2: Brooklyn, Bronx, Manhattan, Queens and Staten Island

Region 3: Dutchess, Orange, Putnam, Rockland, Sullivan, Ulster and Westchester counties

Region 4: Albany, Columbia, Delaware, Greene, Montgomery, Otsego, Rensselaer, Schenectady and Schoharie counties

Region 5: Clinton, Essex, Franklin, Fulton, Hamilton, Saratoga, Warren and Washington counties

Region 6: Herkimer, Jefferson, Lewis, Oneida and St. Lawrence counties

Region 7: Broome, Cayuga, Chenango, Cortland, Madison, Onondaga, Oswego, Tioga and Tompkins counties

Region 8: Chemung, Genesee, Livingston, Monroe, Ontario, Orleans, Schuyler, Seneca, Steuben, Wayne and Yates counties

Region 9: Allegany, Chautauqua, Cattaraugus, Erie, Niagara and Wyoming counties

Guide to Table 3

Reach: A stream reach is a segment of stream that shares, at a basic level, a common set of physical and biological characteristics that influence its ability to support trout and trout angling opportunity for the public.

Miles: The miles of the trout stream reach (this information will be provided in February 2021).

Total # of Trout: The total number of trout is the total number of yearlings and 12+ inch trout planned to be stocked (this information will be provided in February 2021).

CR : Management categories marked with a ^{CR} (for Catch and Release) denote trout stream reaches that have a grandfathered catch-and-release regulation.
